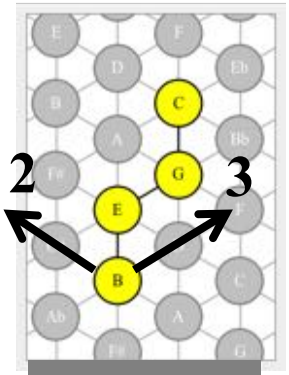
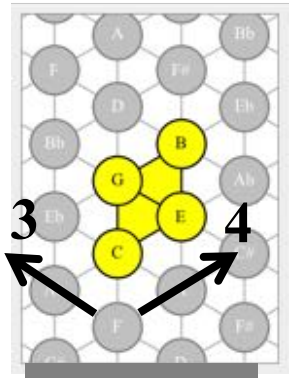
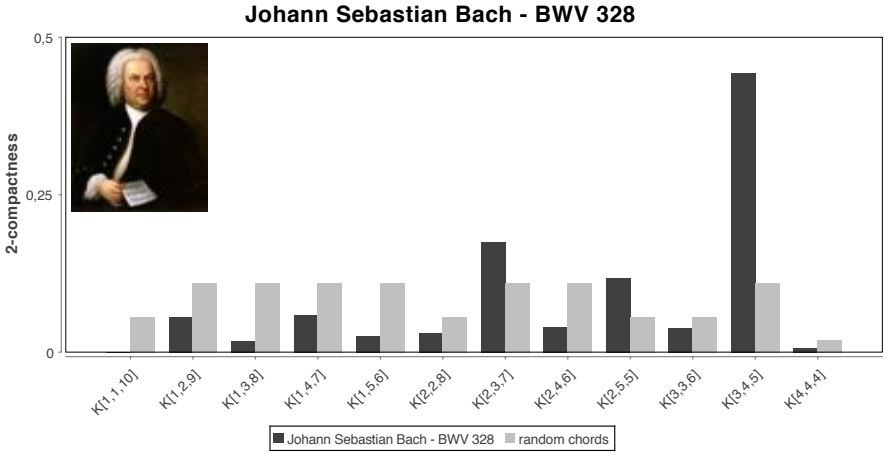
The geometric character of musical logic

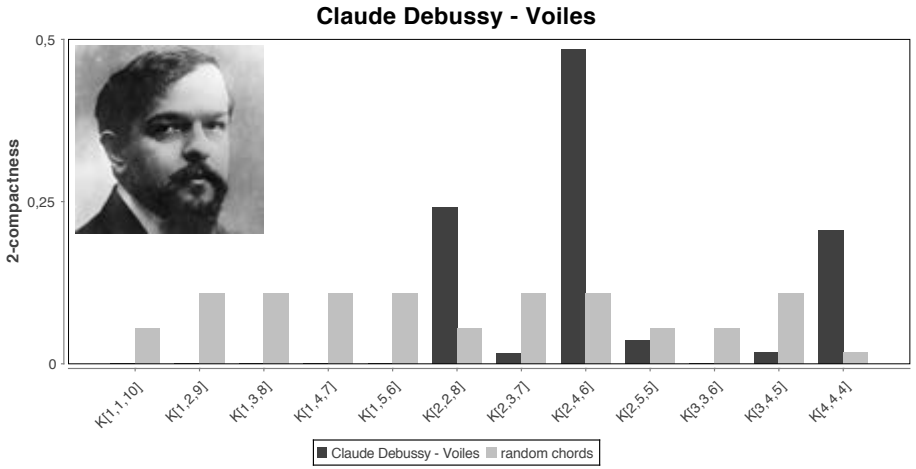


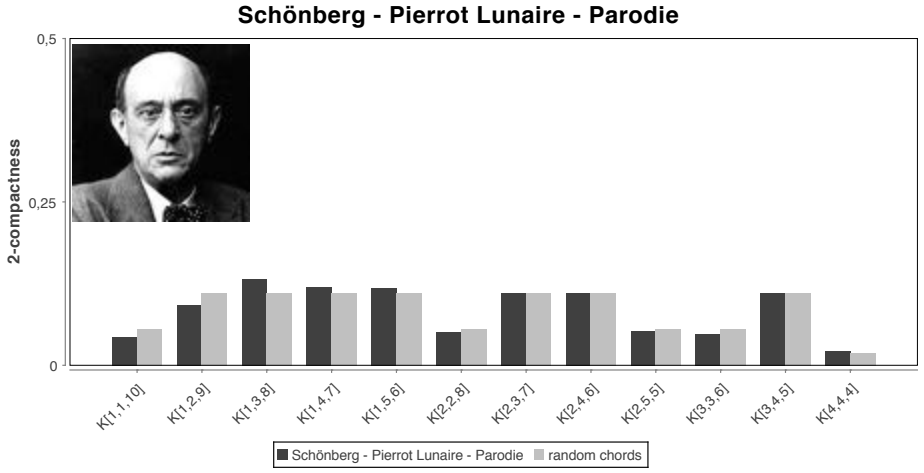
T[2,3,7]



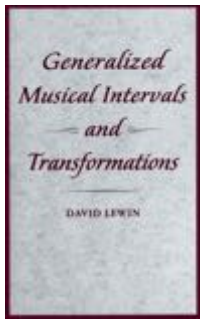
T[3,4,5]



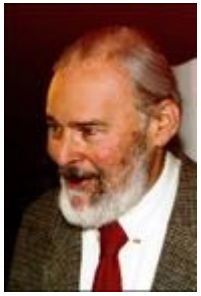




Bigo L., M. Andreatta, « Musical analysis with simplicial chord spaces », in D. Meredith (ed.), *Computational Music Analysis*, Springer, 2015



Système d'Intervalles Généralisés - Système Généralisé d'Intervalles
David Lewin's *Generalized Interval System* [GMIT, 1987]



D. Lewin

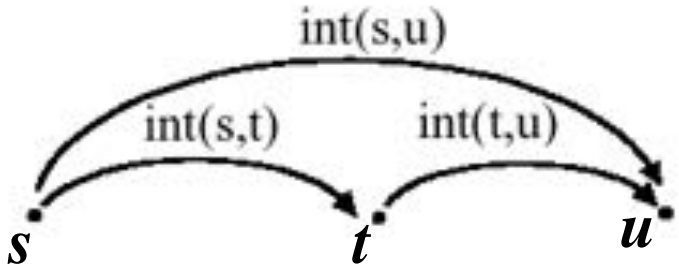
GIS = (*S*, *G*, int)

S **= set**

(*G*,•) = group of intervals

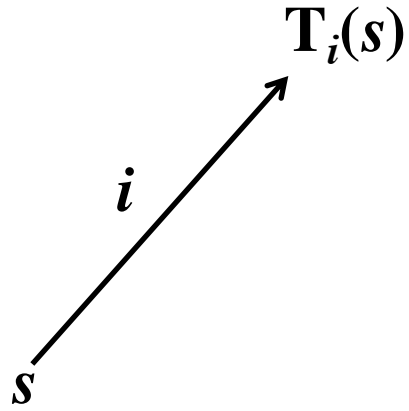
int = intervallic function

$$S \times S \xrightarrow{\text{int}} G$$



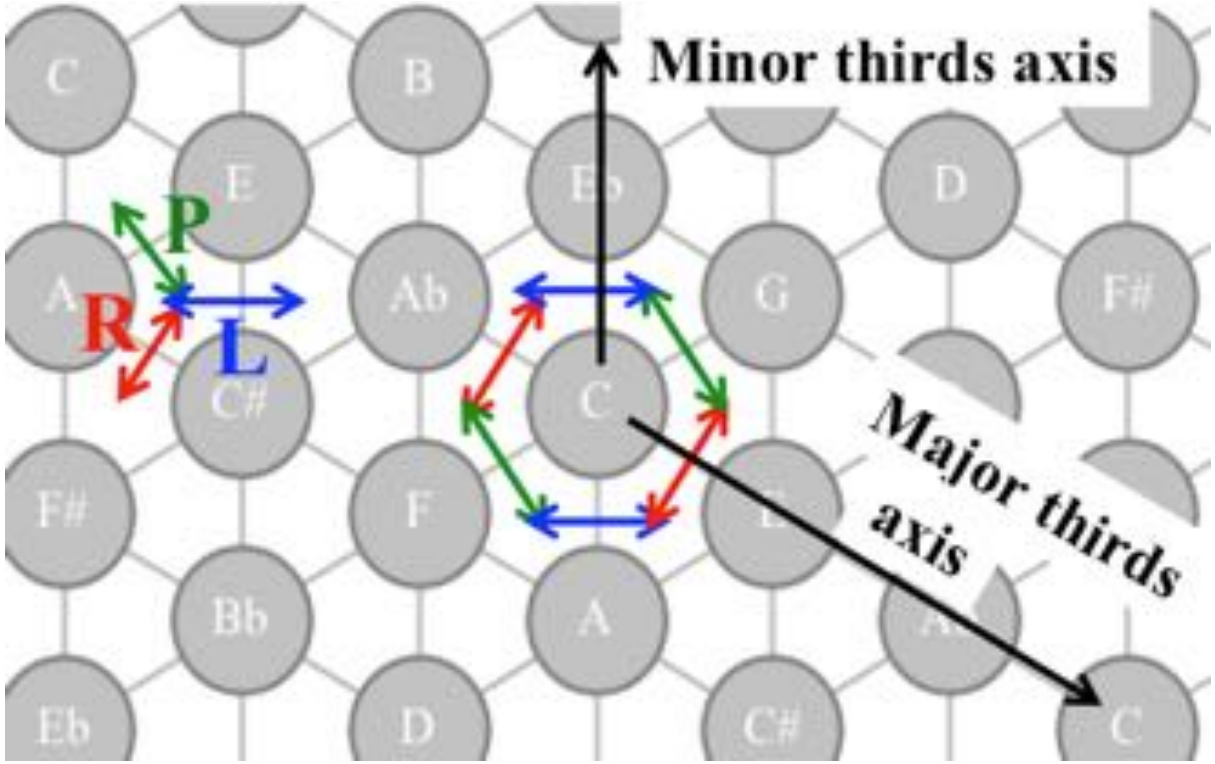
Simply transitive action

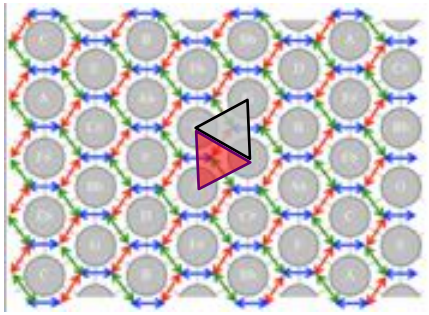
1. **For all objects *s*, *t*, *u* in *S* :**
   int(*s*, *t*)•int(*t*, *u*) = int(*s*, *u*)
2. **For all object *s* in *S* and for all interval *i* in *G* there exists a unique object *t* in *S* such that int(*s*, *t*) = *i***

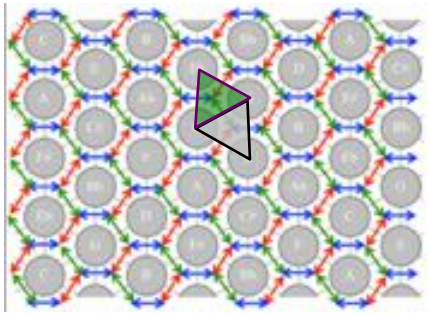


Let $\tau = \{T_i ; i \in G\}$ be the group of transpositions
GIS = (*S*, *G*, int) $\Leftrightarrow$ $\tau \times S \rightarrow S$ such that $(T_i , s) \rightarrow T_i(s)$ where $\text{int}(s, T_i(s)) = i$

The *Tonnetz* as "Generalized Interval System"

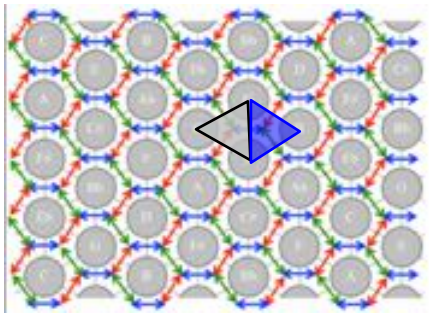




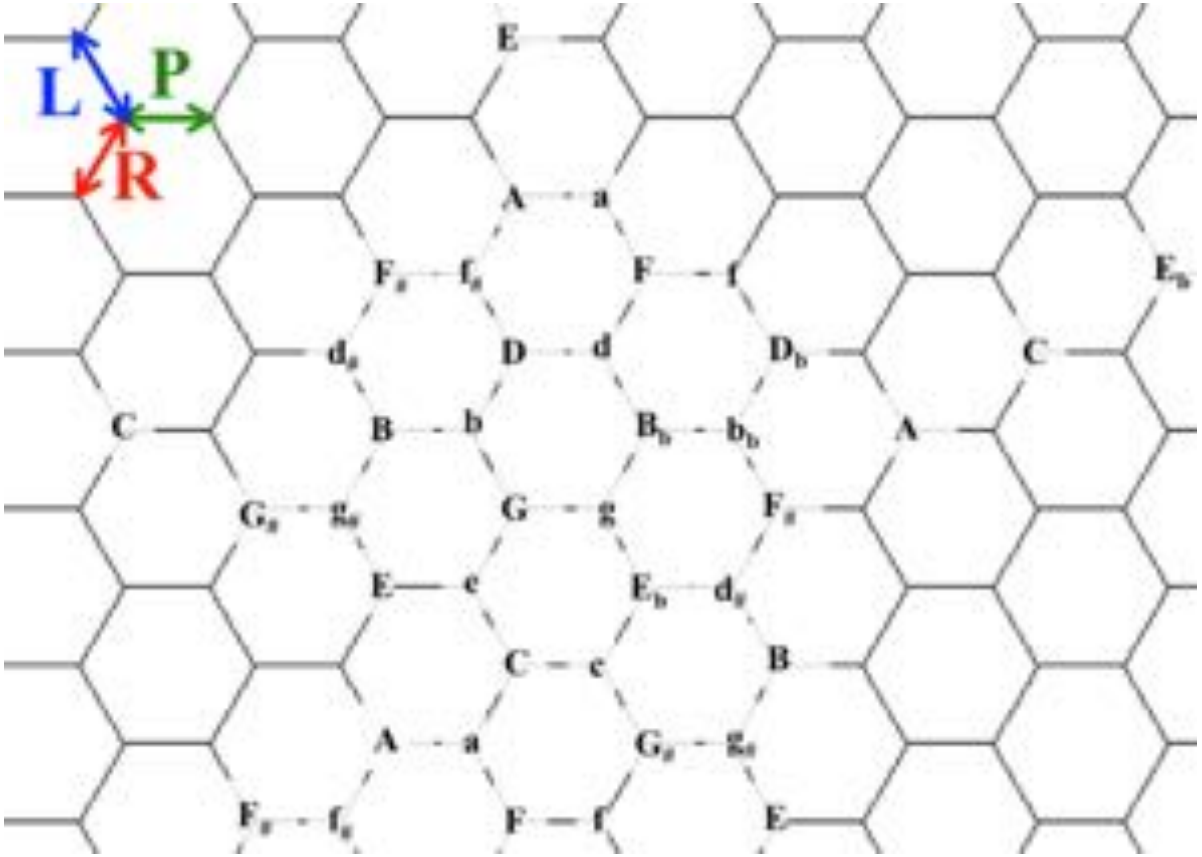


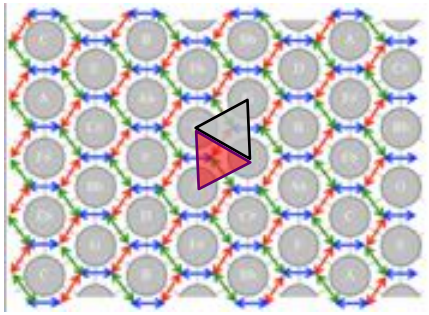
$\rho = \langle L, R \mid L^2 = (LR)^{12} = 1 \; ; \; LRL = L(LR)^{-1} \rangle$

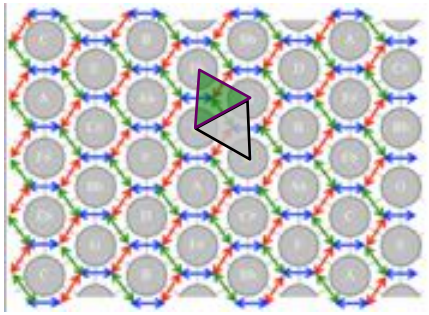
ρ acts in a simply transitive way on the set *S* of the 24 consonant triads



The *Tonnetz* as "Generalized Interval System"

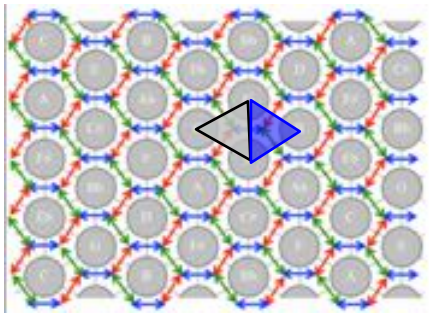




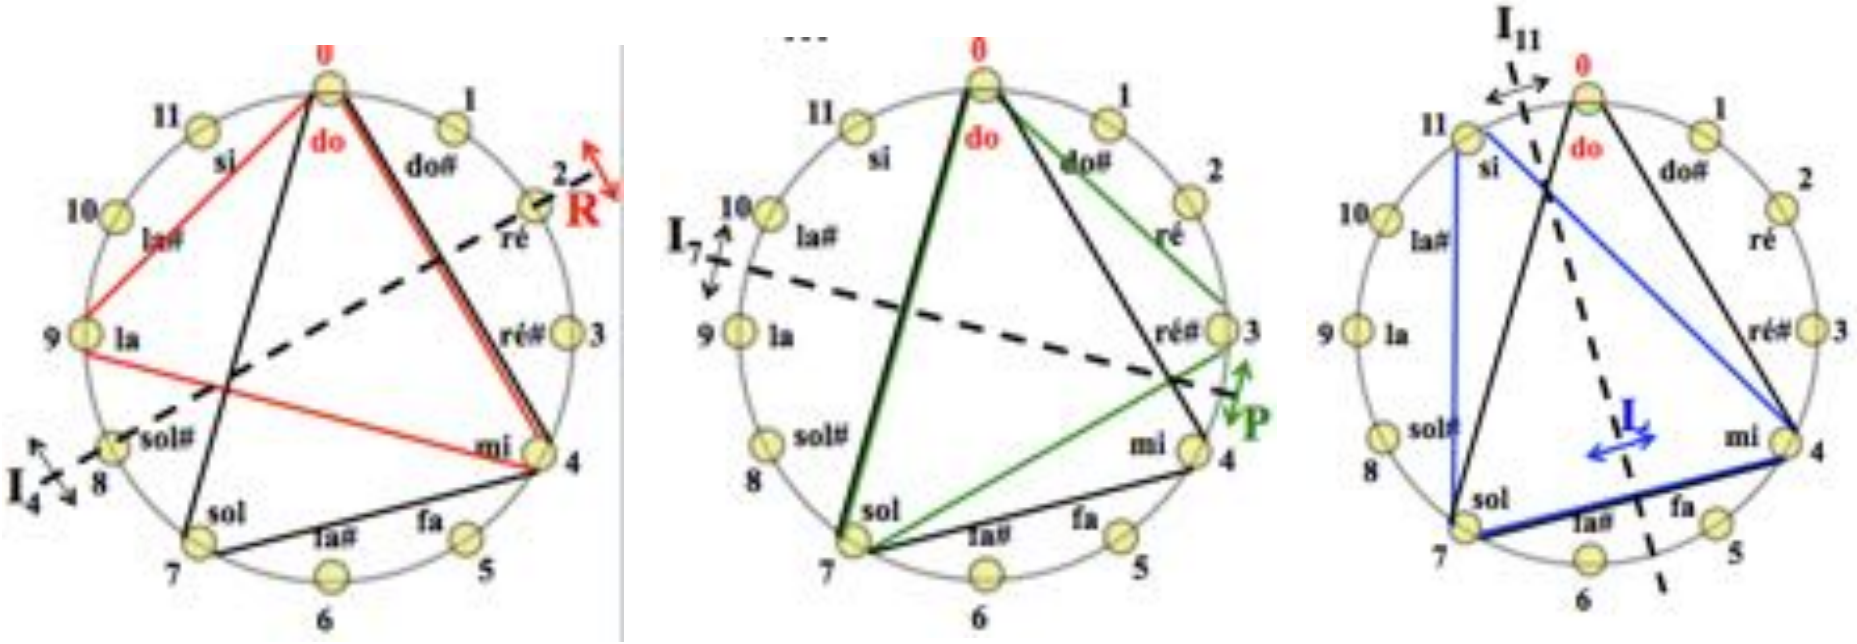


$$\rho = \langle L, R \mid L^2 = (LR)^{12} = 1 \; ; \; LRL = L(LR)^{-1} \rangle$$

ρ acts in a simply transitive way on the set *S* of the 24 consonant triads



A different GIS structure on the same set *S*



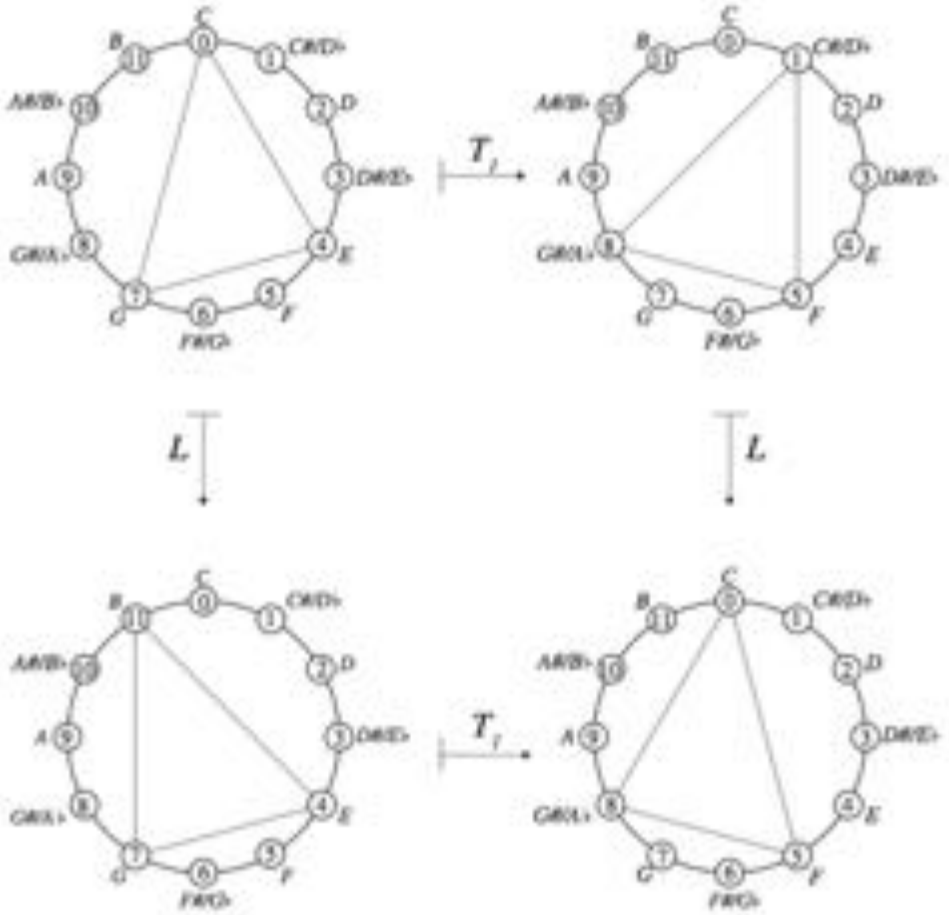
$I_4: x \rightarrow 4-x$ $I_7: x \rightarrow 7-x$ $I_{11}: x \rightarrow 11-x$

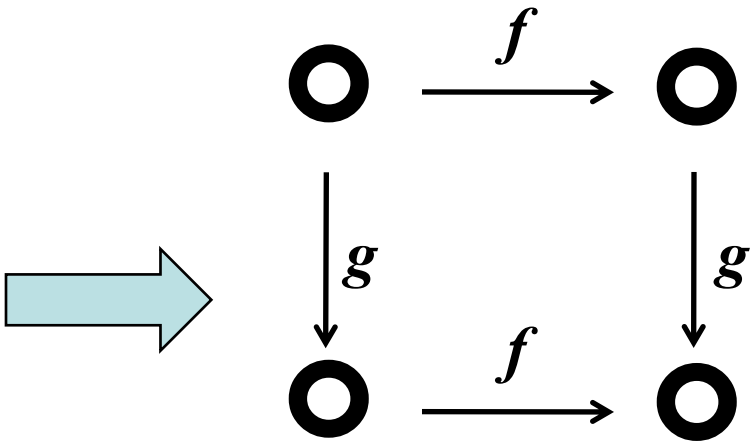
$D_{12} = \langle I, T \mid I^2 = T^{12} = 1 ; ITI = I(IT)^{-1} \rangle$

D_{12} acts in a simply transitive way on the set *S* of the 24 consonant triads

Two “dual” actions on the set of consonant triads

$\rho = \langle L, R \mid L^2 = (LR)^{12} = 1 \; ; \; LRL = L(LR)^{-1} \rangle$ $\leftrightarrow$ $D_{12} = \langle I, T \mid I^2 = T^{12} = 1 \; ; \; ITI = I(IT)^{-1} \rangle$





Every diagram commutes

$\forall f \in D_{12}$

$\forall g \in \rho$

$\langle T_k \rangle : T_m \rightarrow T_m$
$I_m \rightarrow I_{k+m}$

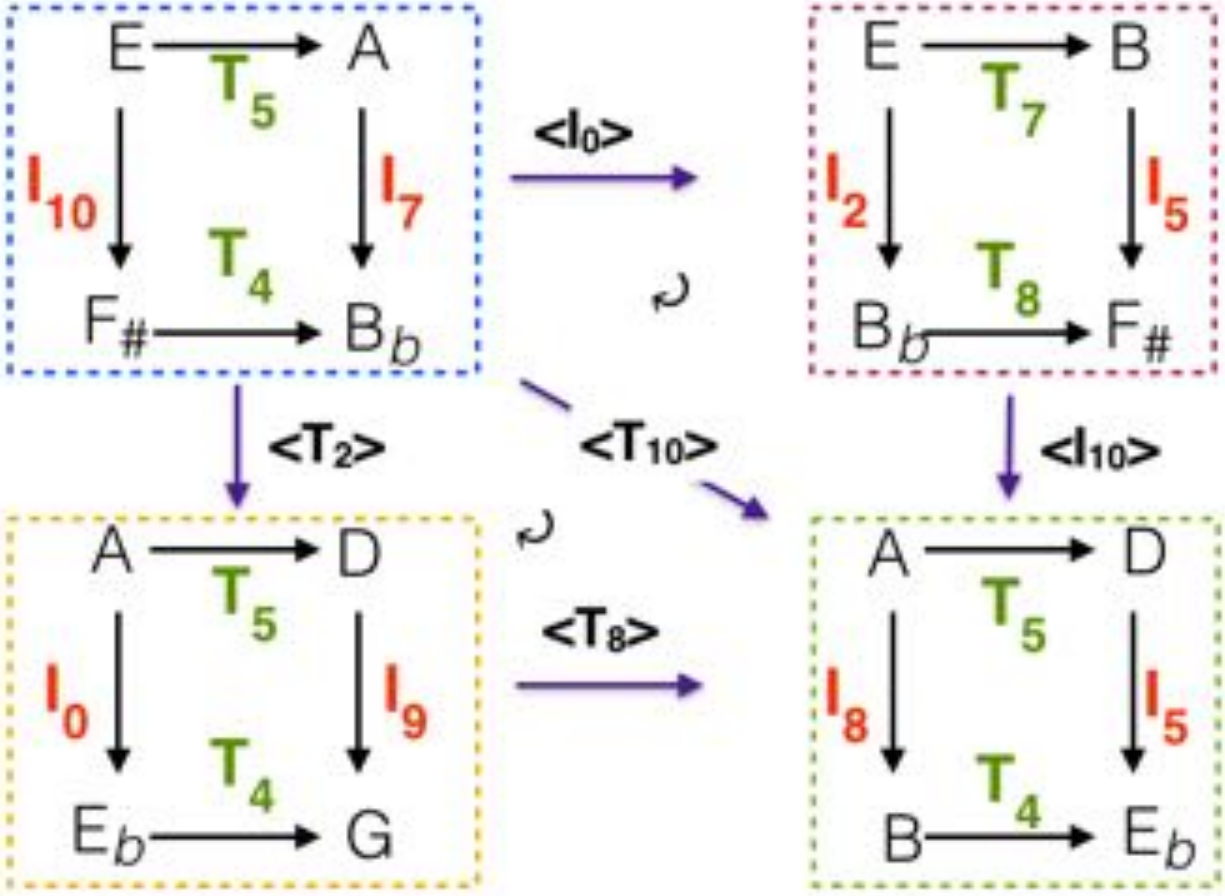
$\langle I_k \rangle : T_m \rightarrow T_{-m}$
$I_m \rightarrow I_{k-m}$



K-nets as a transformational construction

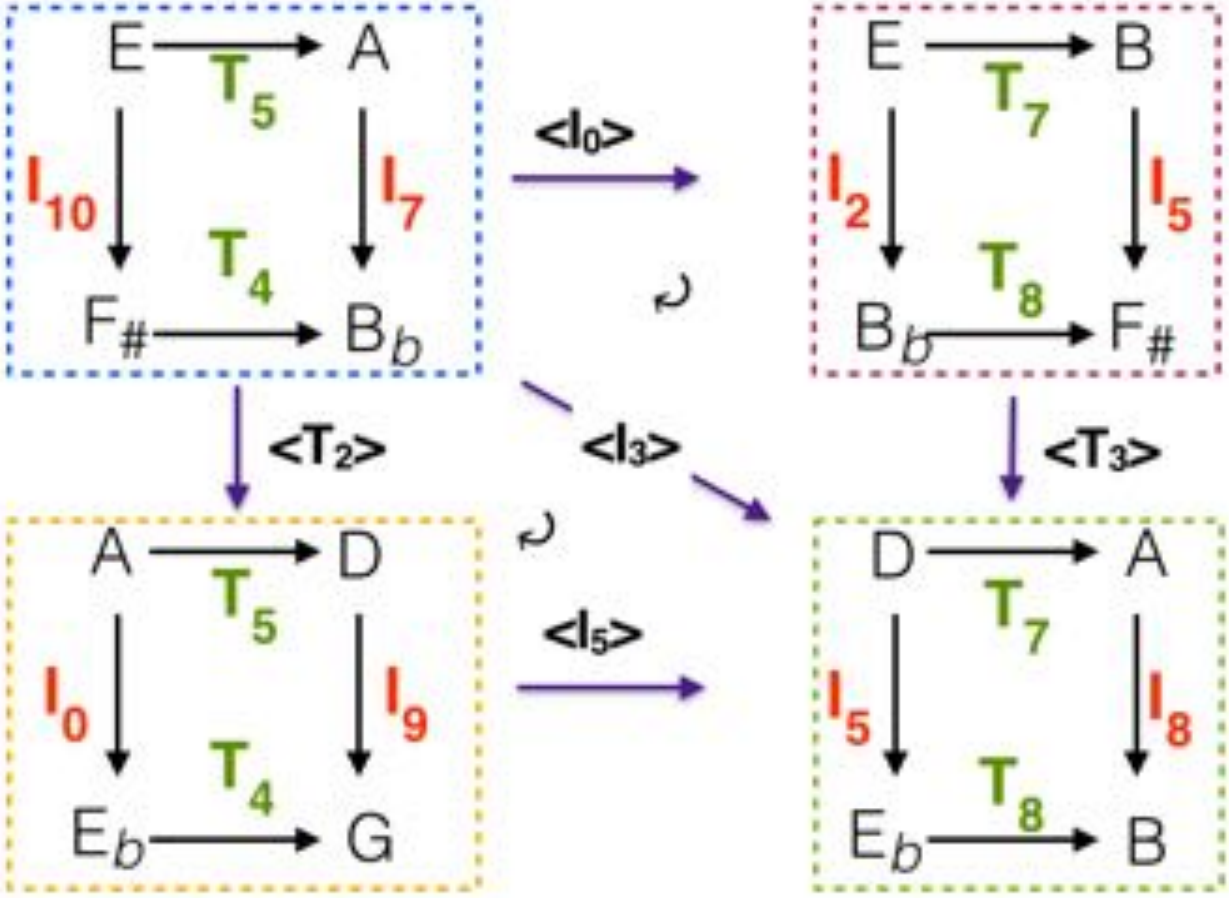
D. Lewin, "A Tutorial on K-nets using the Chorale in Schoenberg's Op.11, N°2 », *JMT*, 1994

D. Lewin

H. Klumpenhouwer

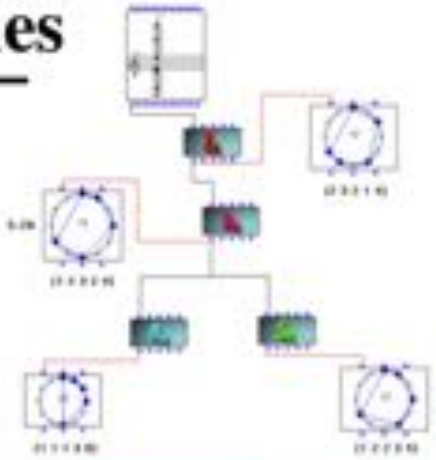
$\langle T_k \rangle : T_m \rightarrow T_m$
$I_m \rightarrow I_{k+m}$

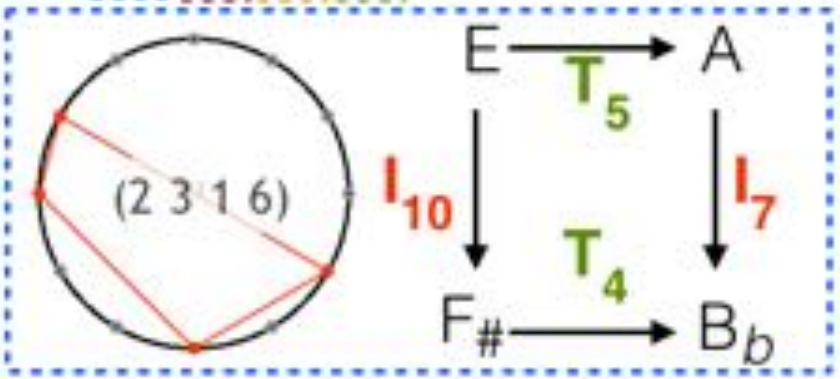
$\langle I_k \rangle : T_m \rightarrow T_{-m}$
$I_m \rightarrow I_{k-m}$

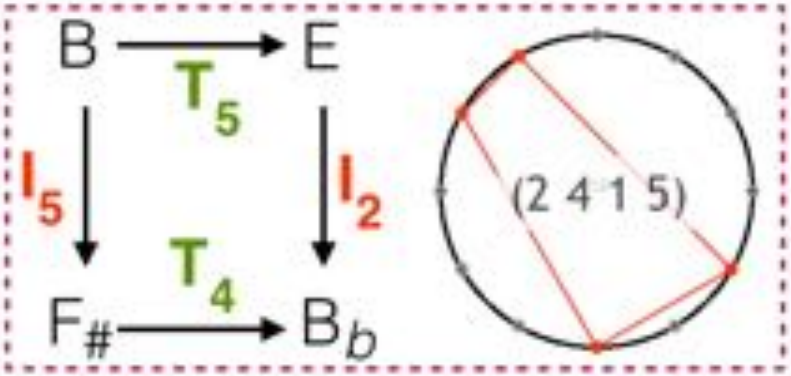


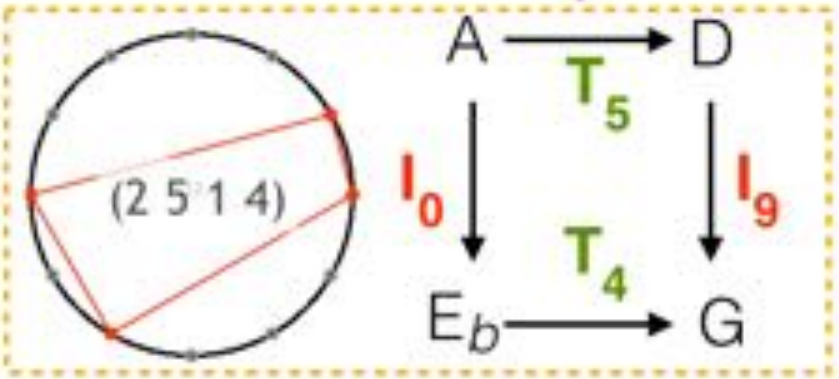
Transformational *vs* set-theoretical approaches

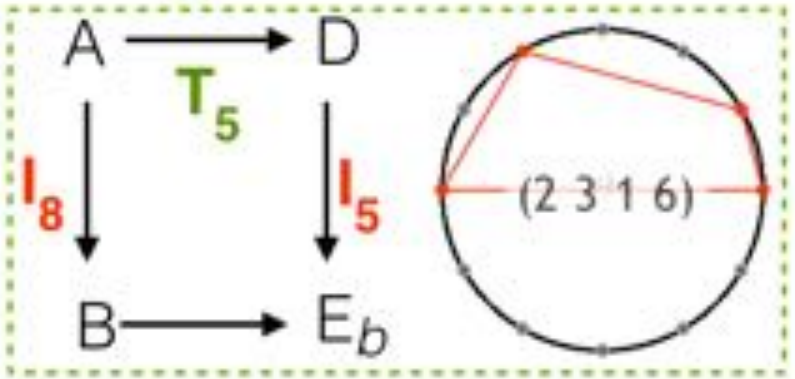
D. Lewin, "A Tutorial on K-nets using the Chorale in Schoenberg's Op.11, N°2 », *JMT*, 1994



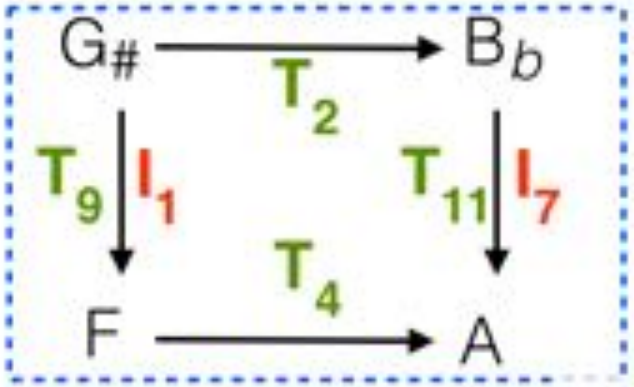


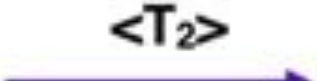


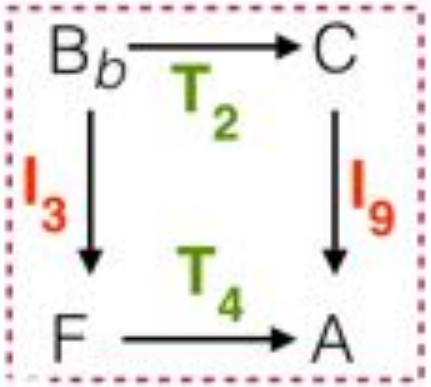


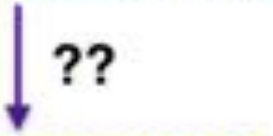


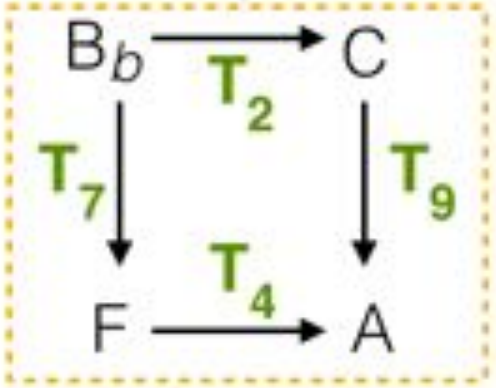
Some theoretical difficulties with the isographic relations

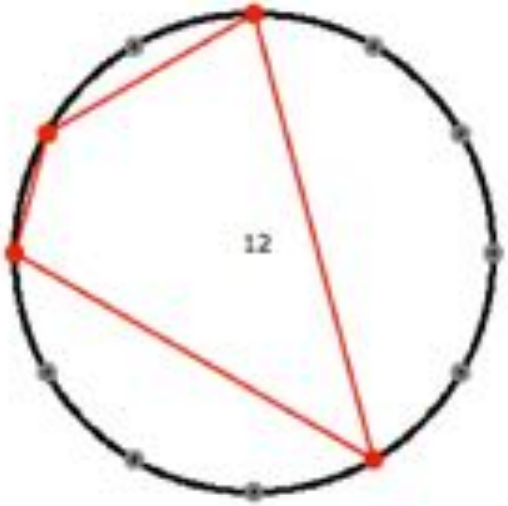








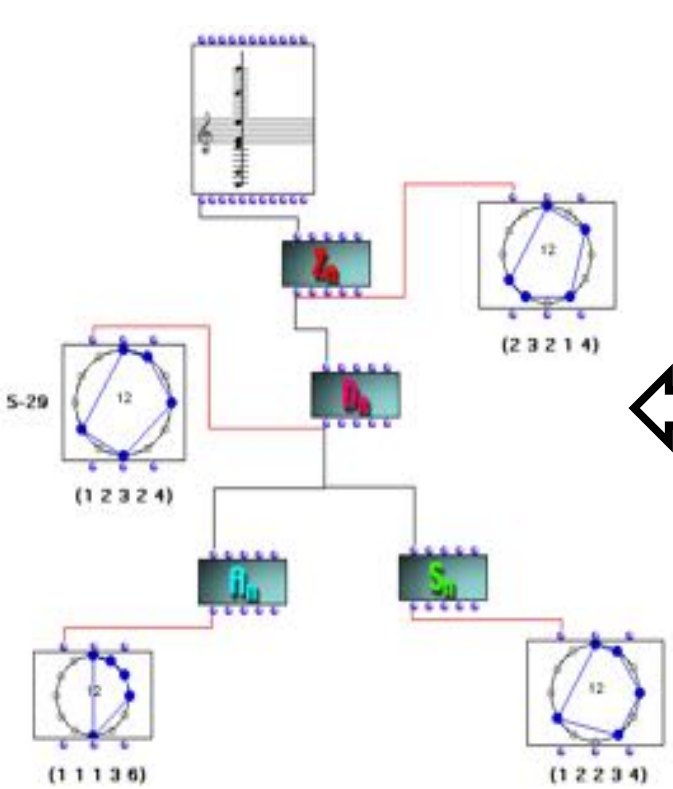




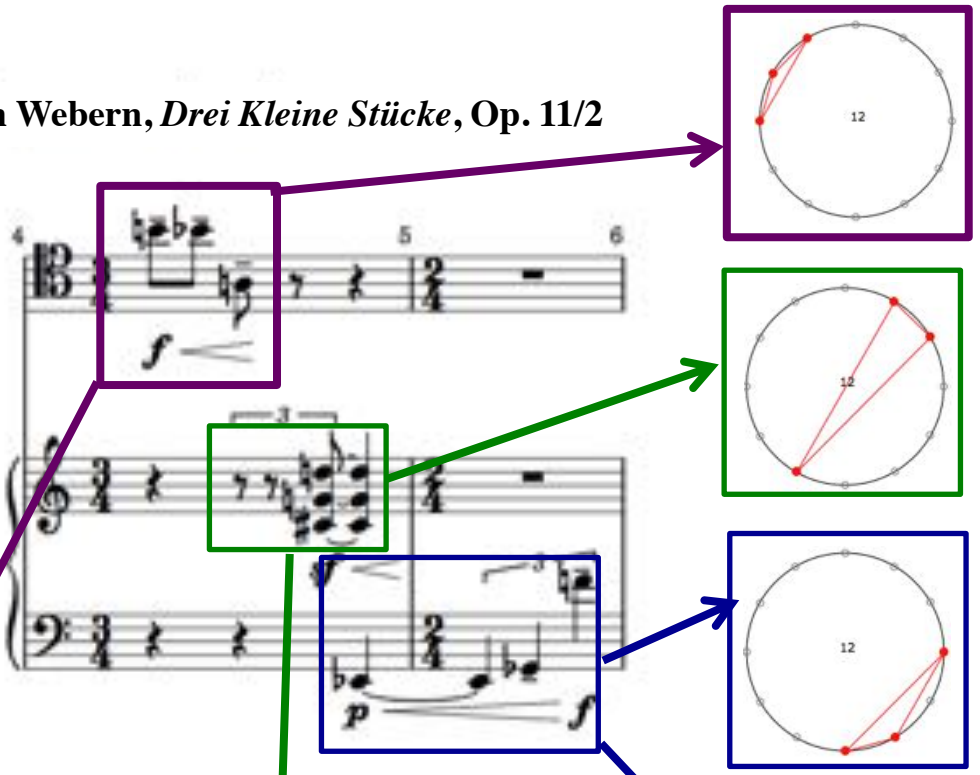
CONCLUSION

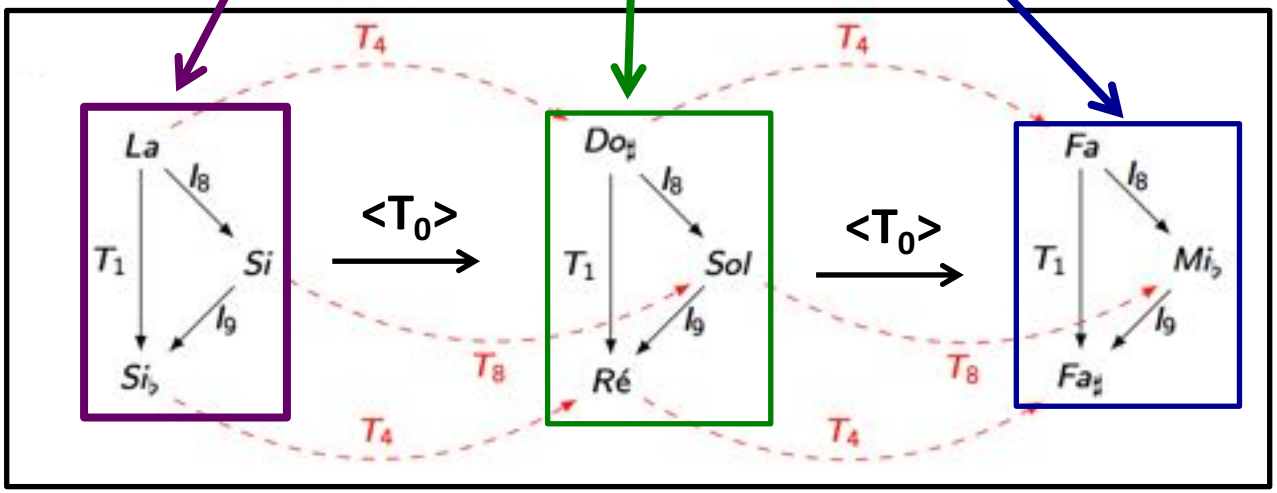
There are K-Nets which are not always isographic to a given one, i.e. the isographic relations are highly sensitives to the transformations used to label the arrows.
Is it possible to overstep this theoretical limitation? Which new definition of K-nets allows one to do that?

The categorical vs paradigmatic action-based approach

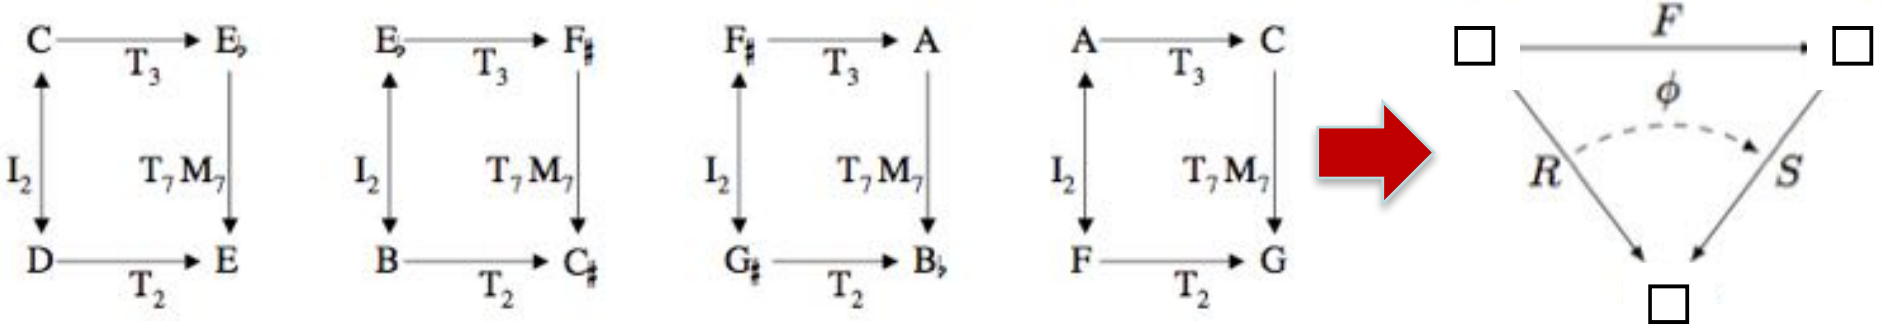


Anton Webern, *Drei Kleine Stücke*, Op. 11/2





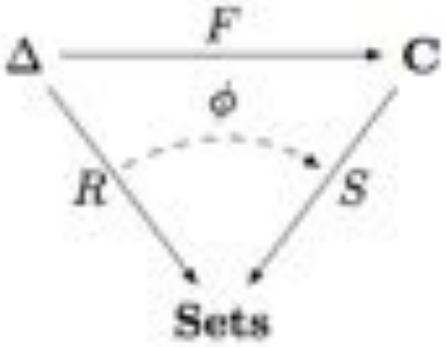
From K-Nets to category-based PK-Nets



Definition 1 *Let* **C** *be a category, and* S *a functor from* **C** *to the category* **Sets**. *Let* Δ *be a small category and* R *a functor from* Δ *to* **Sets**. *A PK-net of form* R *and of support* S *is a 4-tuple* (R, S, F, ϕ), *in which*

- F *is a functor from* Δ *to* **C**,
- *and* ϕ *is a natural transformation from* R *to* SF.

The definition of a PK-net is summed up by the following diagram:



Popoff A., M. Andreatta, A. Ehresmann, « A Categorical Generalization of Klumpenhouwer Networks », MCM 2015, Queen Mary University, Springer, p. 303-314

Topological vs categorical construction of the Tonnetz

time

Le Blé en Herbe

(Polo/Moreno/Dieu)

Plonger comme un enfant, cheveux au vent
Sous l'océan du blé en herbe
Marée d'épis couleur d'amande
Qui tendent à caresser le ciel

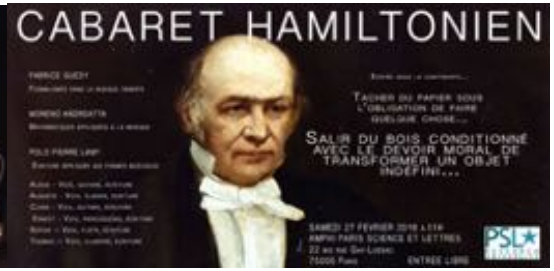
Algues tendres de mille plages
Frôlant le ventre des nuages
Cheveux de pluie, dos de poissons
Qui frissonnent à l'unisson

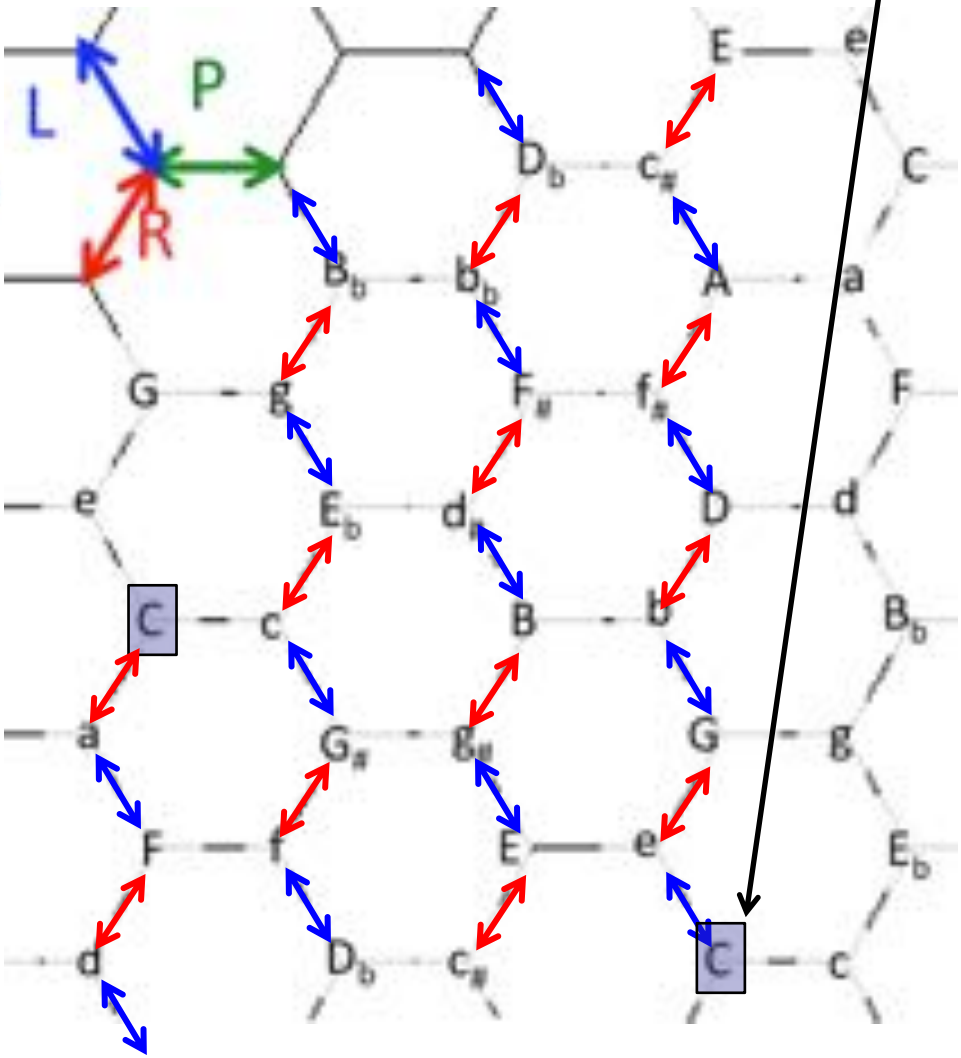
Suivre le bord des continents
Dans l'océan du blé en herbe
Pécher le corail du pavot
Dans le sang des coquelicots

Croiser matin dans l'herbe folle
Deux tourterelles qui s'envolent
Suivre les jeux des hirondelles
Sur le paysage éternel
Nager comme un enfant, cheveux au vent
Sous l'océan
Du blé en herbe

Marée de fruits au goût amer
Acide et salée comme la mer

Vers l'îlôt d'un petit village
Vers un château d'eau sur la plage
Quand tout s'éteint avant l'orage
Quand se lève le vent du large
Sur le blé vert





Aprile, a Hamiltonian « decadent » song

Socchiusa è la finestra, sul giardino.
Un'ora passa lenta, sonnolenta.
Ed ella, ch'era attenta, s'addormenta
A quella voce che già si lamenta,
Che si lamenta in fondo a quel giardino.

Non è che voce d'acque su la pietra:
E quante volte, quante volte udita!
Quell'amore e quell'ora in quella vita
S'affondan come ne l'onda infinita
Stretti insieme il cadavere e la pietra.

Ella stende l'angoscia sua nel sonno.
L'angoscia è forte, e il sonno è così lieve!
(Par la luce d'april quasi una neve
che sia tiepida.)
Ed ella certo deve soffrire,
Vagamente, anche nel sonno.

G. D'Annunzio (1863-1938)

La sera non è più la tua canzone
(Mario Luzi, 1945, in *Poesie sparse*)

La sera non è più la tua canzone,
è questa roccia d'ombra traforata
dai lumi e dalle voci senza fine,
la quiete d'una cosa già pensata.

Ah questa luce viva e chiara viene
solo da te, sei tu così vicina
al vero d'una cosa conosciuta,
per nome hai una parola ch'è passata
nell'intimo del cuore e s'è perduta.

Caduto è più che un segno della vita,
riposi, dal viaggio sei tornata
dentro di te, sei scesa in questa pura
sostanza così tua, così romita
nel silenzio dell'essere, (compiuta).

L'aria tace ed il tempo dietro a te
si leva come un'arida montagna
dove vaga il tuo spirito e si perde,
un vento raro scivola e ristagna.

From poetry to song writing: hamiltonian compositional strategies

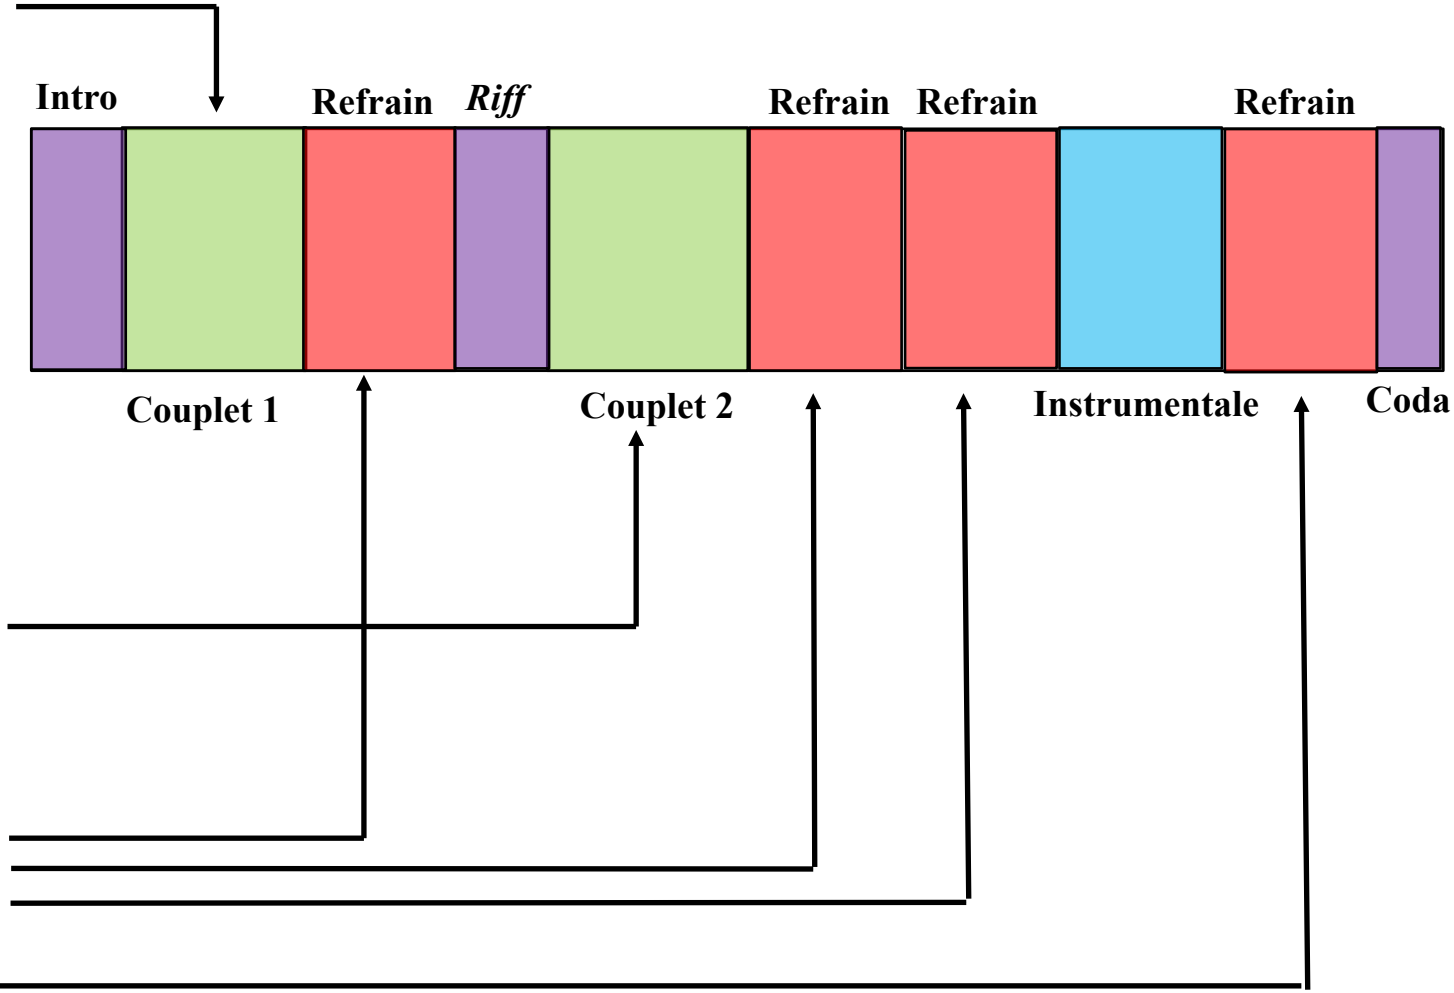
A part (Andrée Chedid, poème tiré du recueil *Rhymes* Collection Poésie/Gallimard (n. 527), Gallimard, 2018)

À part le temps
Et ses rouages
À part la terre
En éruptions
À part le ciel
Pétrisseur de nuages
À part l'ennemi
Qui génère l'ennemi

À part le désamour
Qui ronge l'illusion
À part la durée
Qui moisit nos visages

À part les fléaux
À part la tyrannie
À part l'ombre et le crime
Nos batailles nos outrages

Je te célèbre ô Vie
Entre cavités et songes
Intervalle convoité
Entre le vide et le rien



The catalogue of 28 hamiltonian cycles (with inner symmetry)

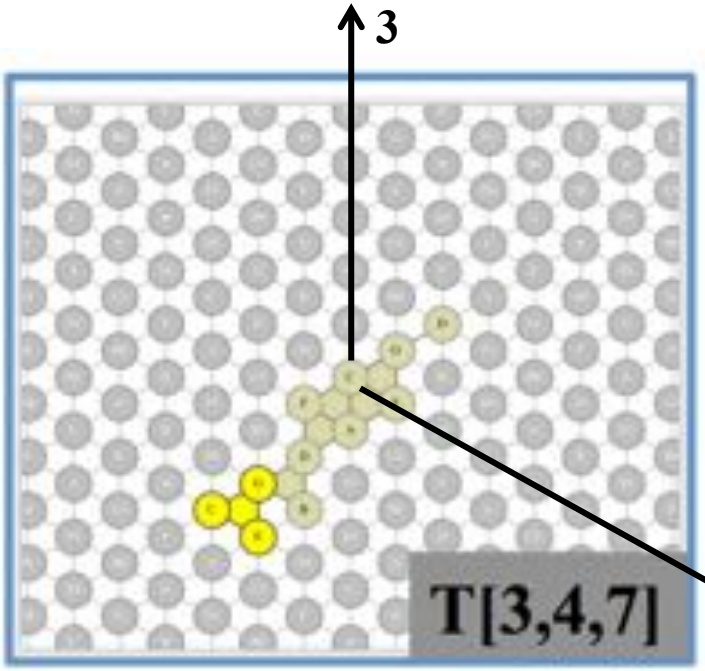
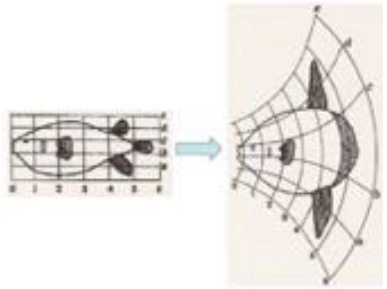
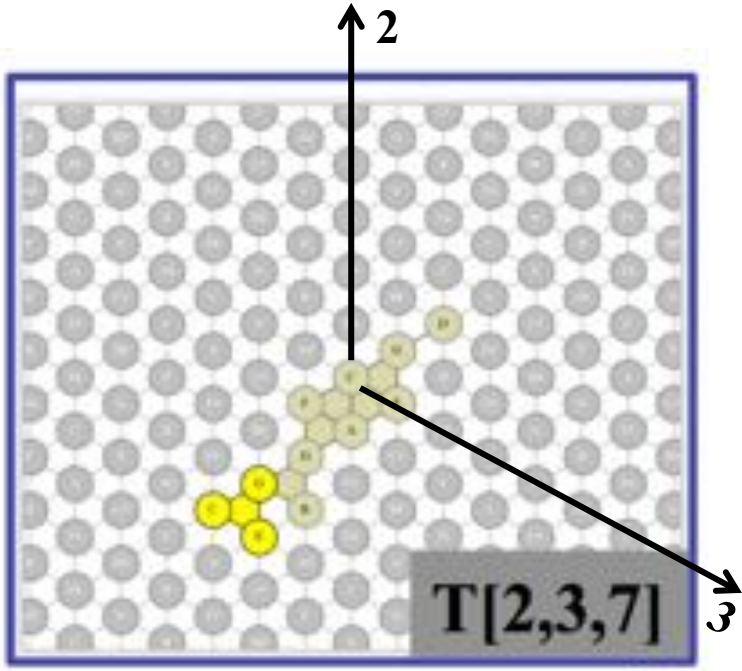
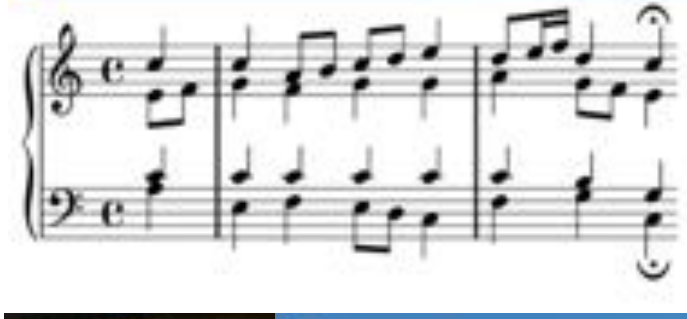
The musical style...is the space!

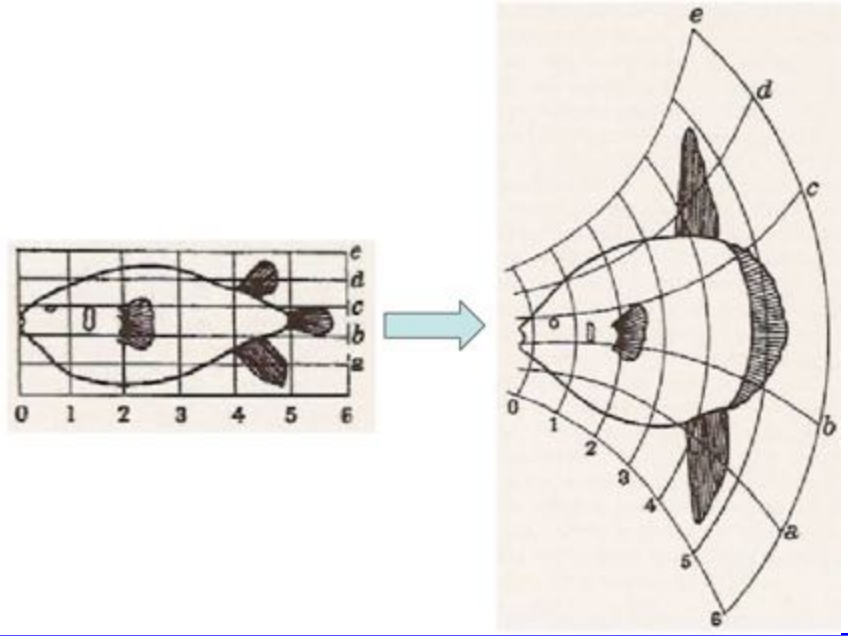




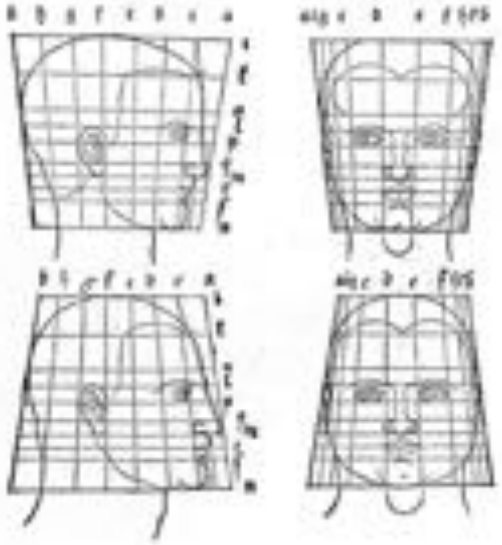




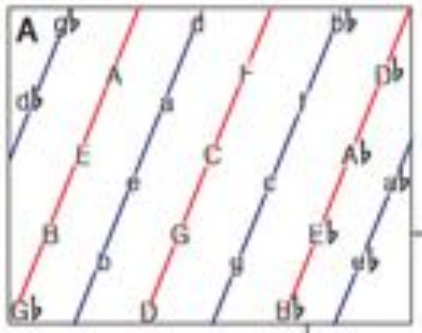
The morphological *vs* the mathematical genealogy of the structuralism



"[The notion of **transformation**] comes from a work which played for me a very important role and which I have read during the war in the United States : *On Growth and Form*, in two volumes, by **D'Arcy Wentworth Thompson**, originally published in 1917. The author (...) proposes an interpretation of the visible transformations between the species (animals and vegetables) within a same gender. This was fascinating, in particular because I was quickly realizing that this perspective had a long tradition: behind Thompson, there was **Goethe's** botany and behind Goethe, **Albert Dürer** with his *Treatise of human proportions*" (Lévi-Strauss, conversation with Eribon, 1988).



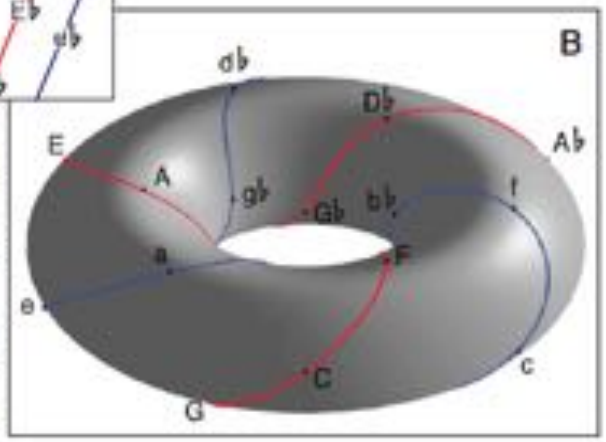
Some cognitive implications of mathemusical research



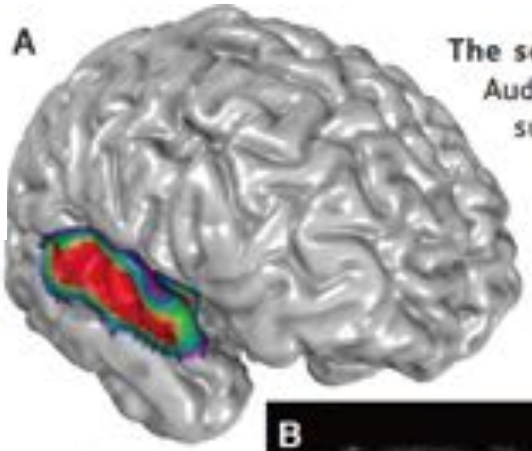
PERSPECTIVES: NEUROSCIENCE

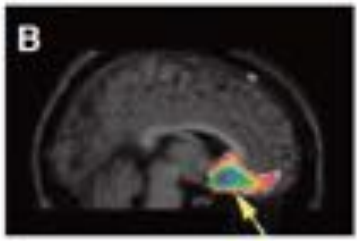
Mental Models and Musical Minds

Robert J. Zatorre and Carol L. Krumhansl

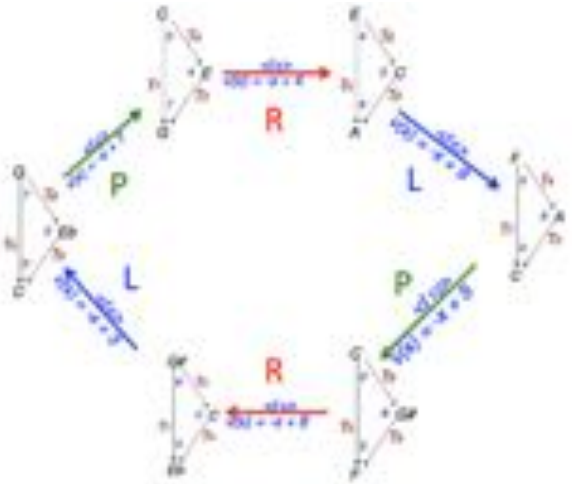


Mental key maps. (A) Unfolded version of the key map, with opposite edges to be considered matched. There is one circle of fifths for major keys (red) and one for minor keys (blue), each wrapping the torus three times. In this way, every major key is flanked by its relative minor on one side (for example, C major and a minor) and its parallel minor on the other (for example, C major and c minor). (B) Musical keys as points on the surface of a torus.





The sensation of music. (A) Auditory cortical areas in the superior temporal gyrus that respond to musical stimuli. Regions that are most strongly activated are shown in red. (B) Metabolic activity in the ventromedial region of the frontal lobe increases as a tonal stimulus becomes more consonant.

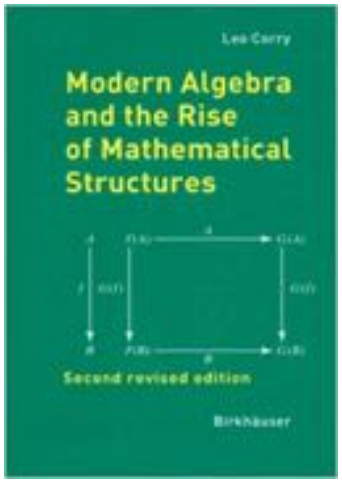


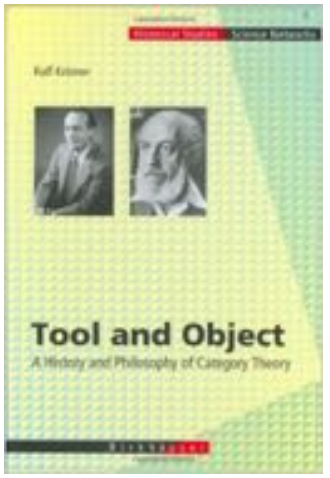
« La **théorie des catégories** est une théorie des constructions mathématiques, qui est macroscopique, et procède d'étage en étage. Elle est un bel exemple d'**abstraction réfléchissante**, cette dernière reprenant elle-même un principe constructeur présent dès le stade sensori-moteur. Le **style catégoriel** qui est ainsi à l'image d'un aspect important de la genèse des facultés cognitives, est un style adéquat à la description de cette genèse »

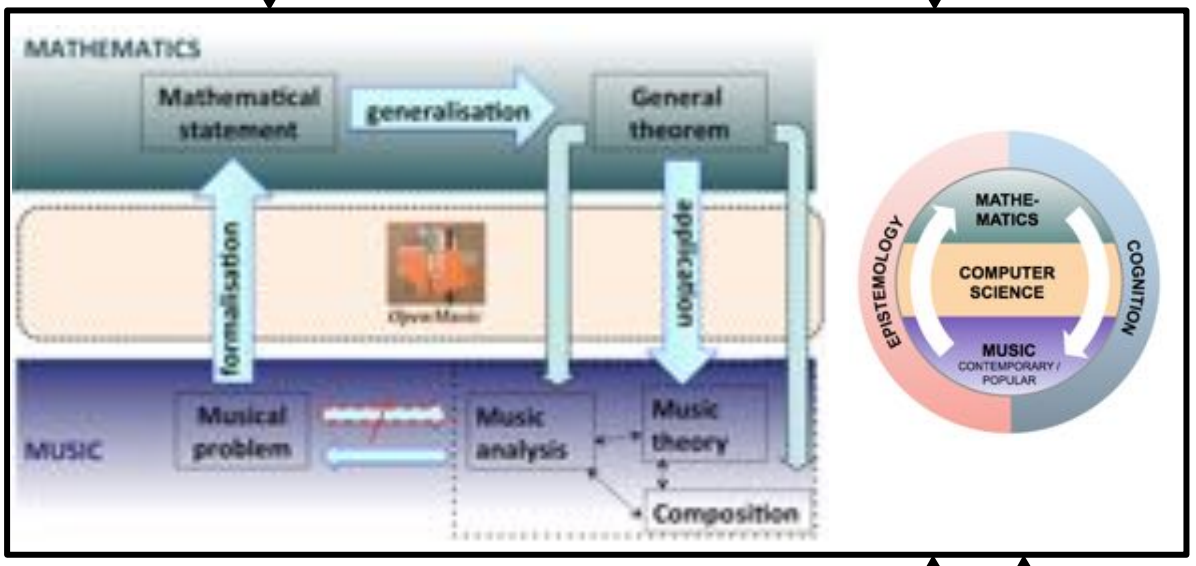
J. Piaget

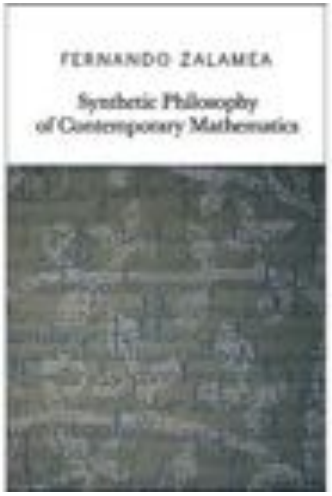
Jean Piaget, Gil Henriques et Edgar Ascher, ***Morphismes et Catégories. Comparer et transformer*****, 1990**

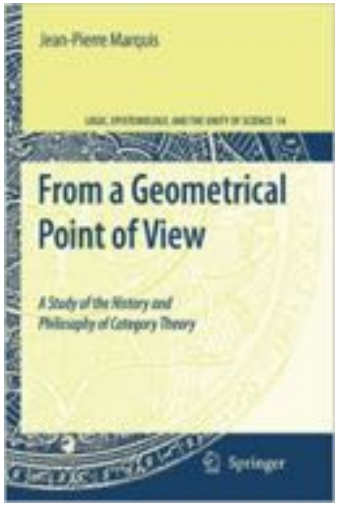
Which type of philosophy for the *mathemusical* research?



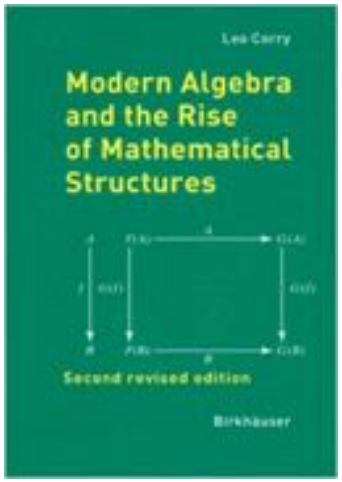


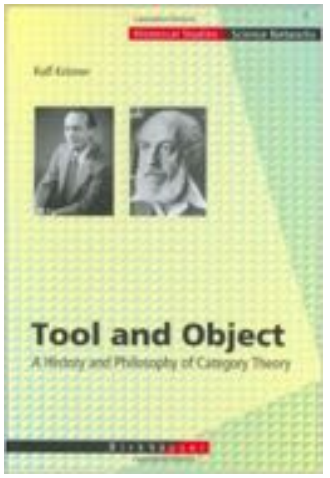


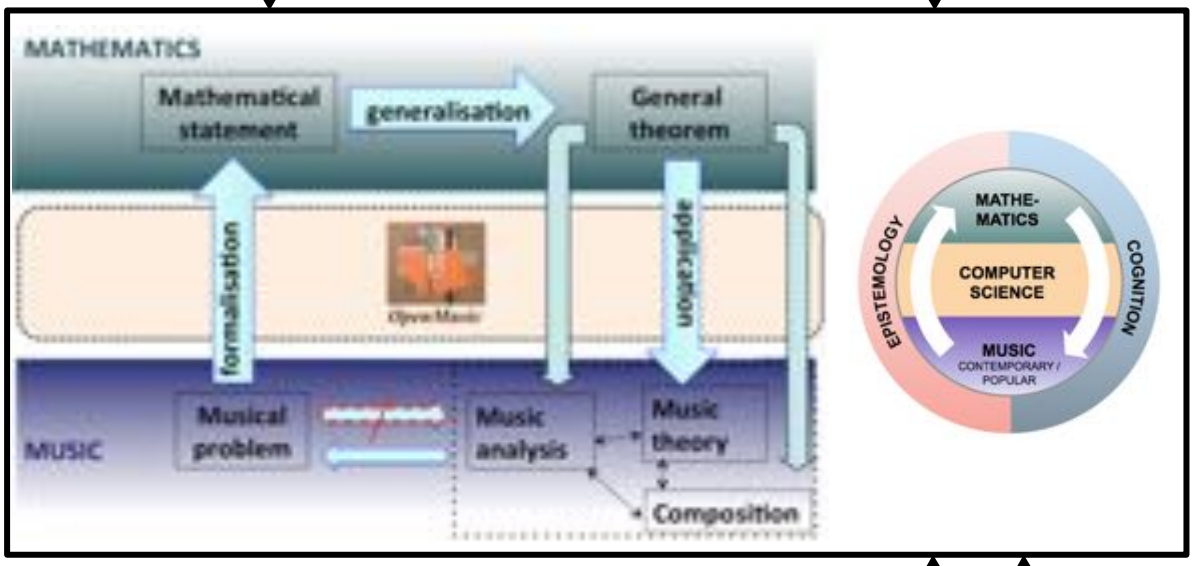


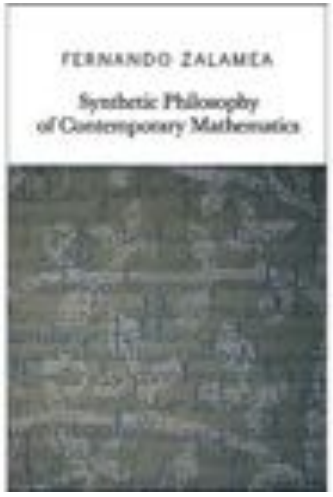


Which type of philosophy for the *mathemusical* research?

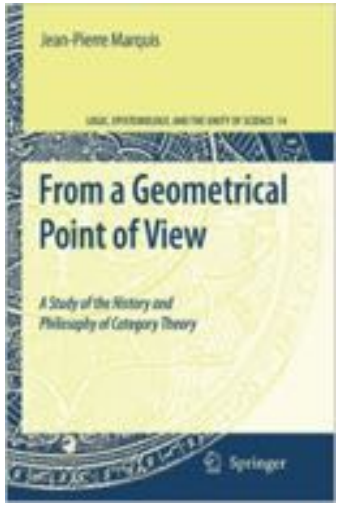








*A **synthetic** vision allows us to link together apparently distant strata of mathematics and culture, helping us to break down many artificial barriers. Not only can today's mathematics be appreciated through epistemic, ontic, phenomenological and aesthetic modes, but in turn, it should help to transform **philosophy.***



Which type of philosophy for the *mathemusical* research?

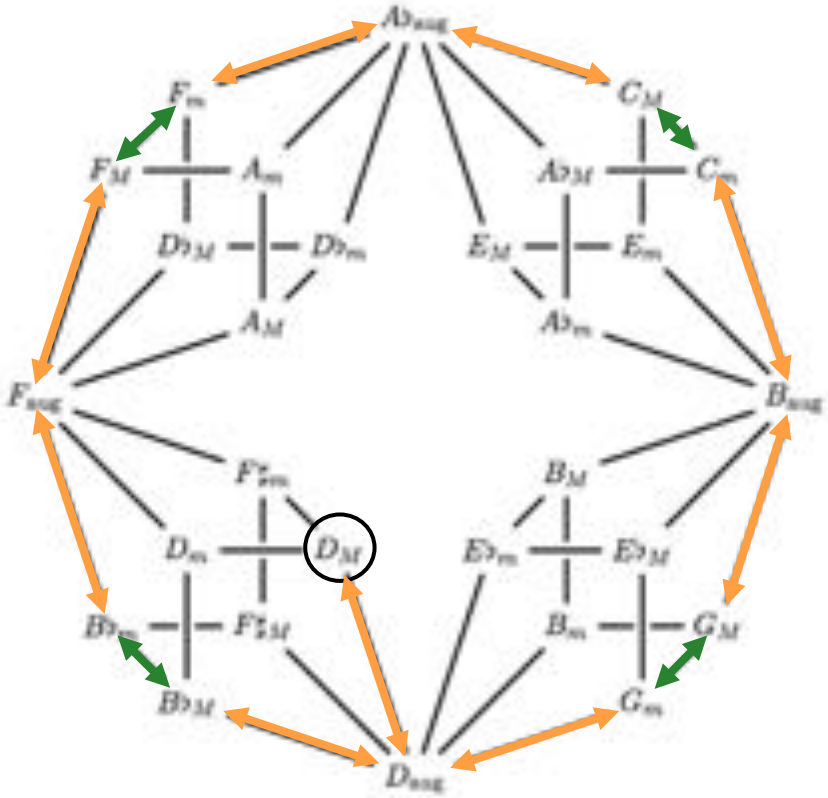
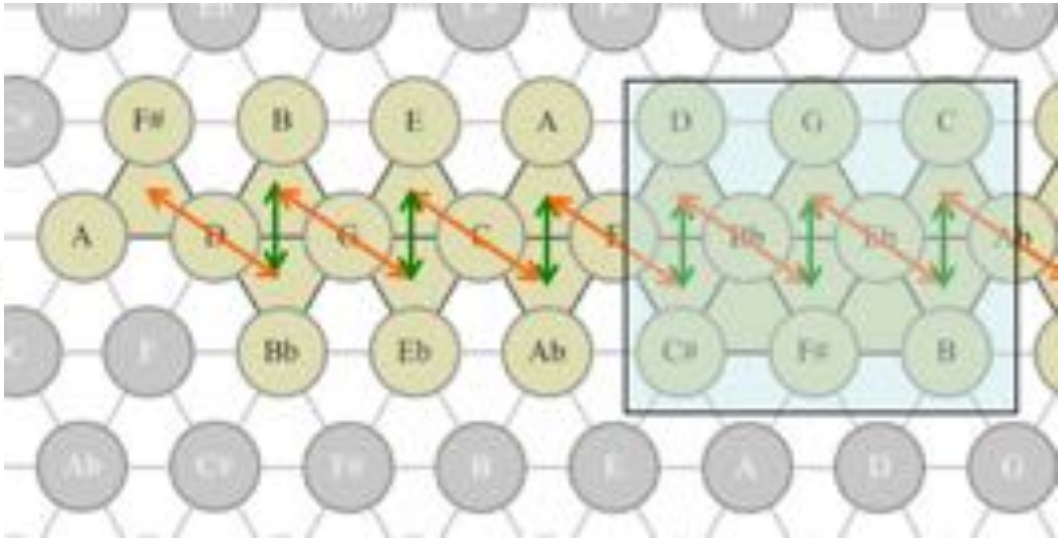
Hexachord (Louis Bigo, 2013)

Temporal axis

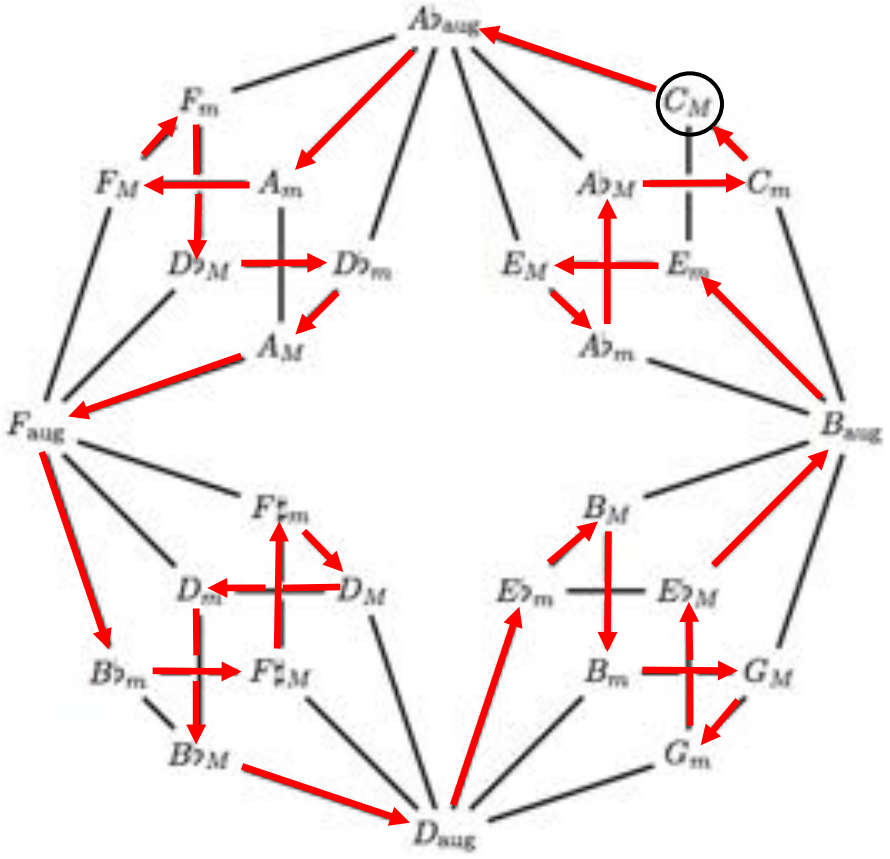
Representing *Muse's* progression in the Cube Dance





J. Douthett, P. Steinbach, Parsimonious Graphs: A Study in Parsimony, Contextual Transformation, and Modes of Limited Transposition, *Journal of Music Theory*, 42/2, 1998.

The Gunner's Hamiltonian Dream (an *oumoupian* experiment on a song by Pink-Floyd)



The Gunner's dream (R. Waters, 1983 / M. Andreatta, 2018)

C C+
Floating down through the clouds
Am F
Memories come rushing up to meet me now.
Fm
In the space between the heavens
C# C#m
and in the corner of some foreign field
A F+ Bbm
I had a dream.
F# F#m D Dm
I had a dream.
Bb
Good-bye Max.
D+
Good-bye Ma.
Ebm B
After the service when you're walking slowly to the car
Bm G
And the silver in her hair shines in the cold November air

Gm
You hear the tolling bell
Eb
And touch the silk in your lapel
G+ Em E G#m
And as the tear drops rise to meet the comfort of the band
G# Cm
You take her frail hand
C
And hold on to the dream.

The three main hamiltonian cycles (C_M = C, C_m = Cm, C_{aug} = C+)

C-->C+-->Am-->F-->Fm-->C#-->C#m-->A-->F+-->Bbm-->F#-->F#m-->D-->Dm-->Bb-->D+-->Ebm-->B-->Bm-->
