Le cycle des quintes et la gamme diatonique

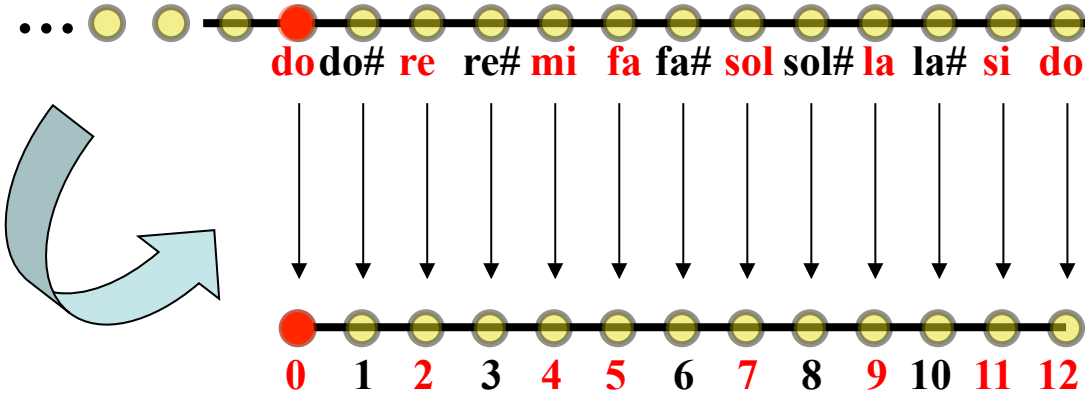
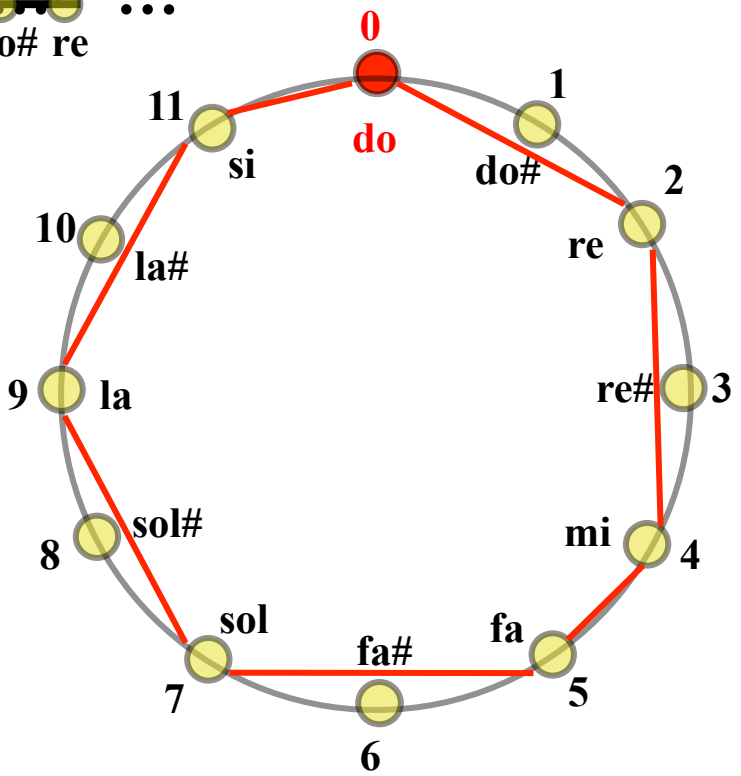
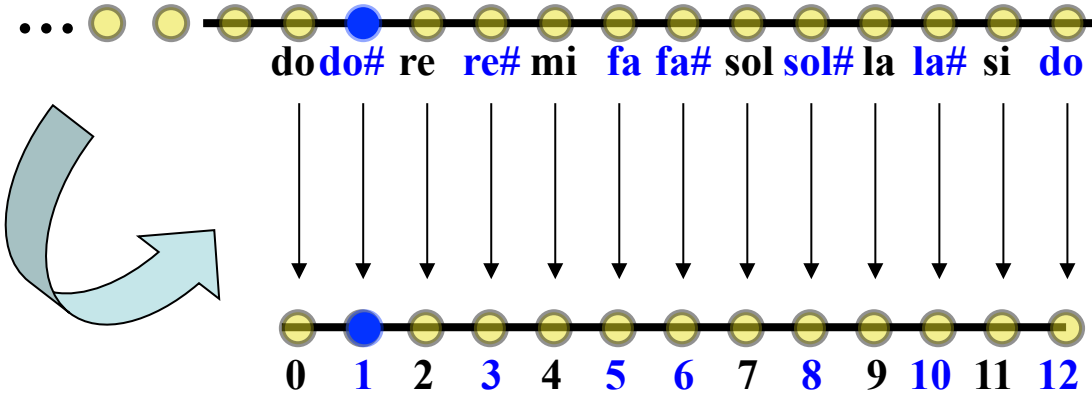
***Do* maj = gamme de *do* majeur**

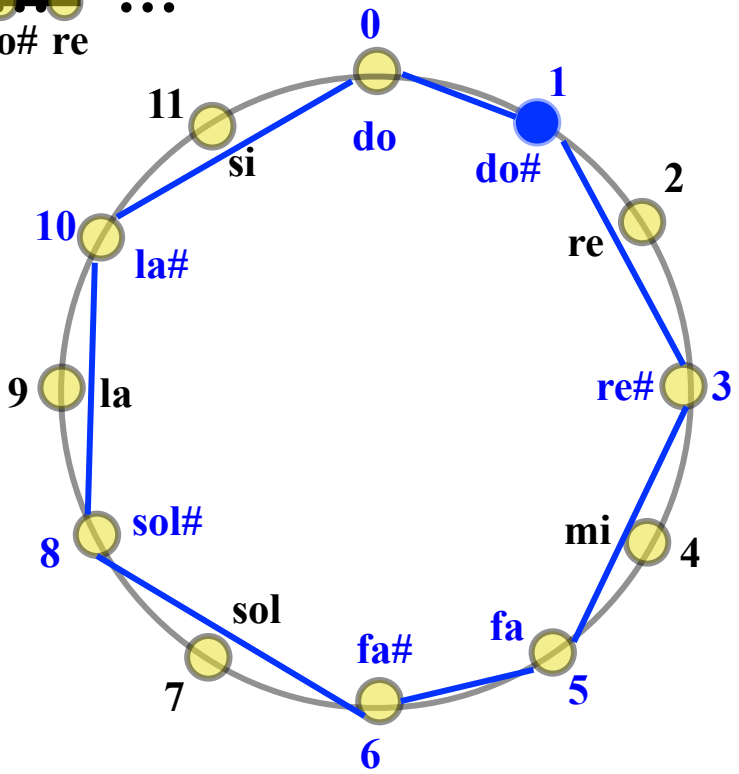




Les rotations d'un polygone sont les transpositions

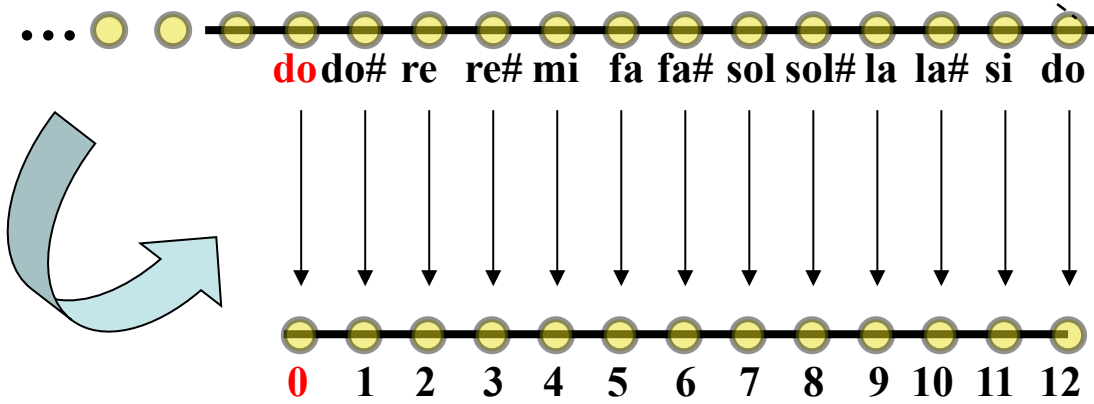
***Do#* maj = gamme de *do#* majeur**

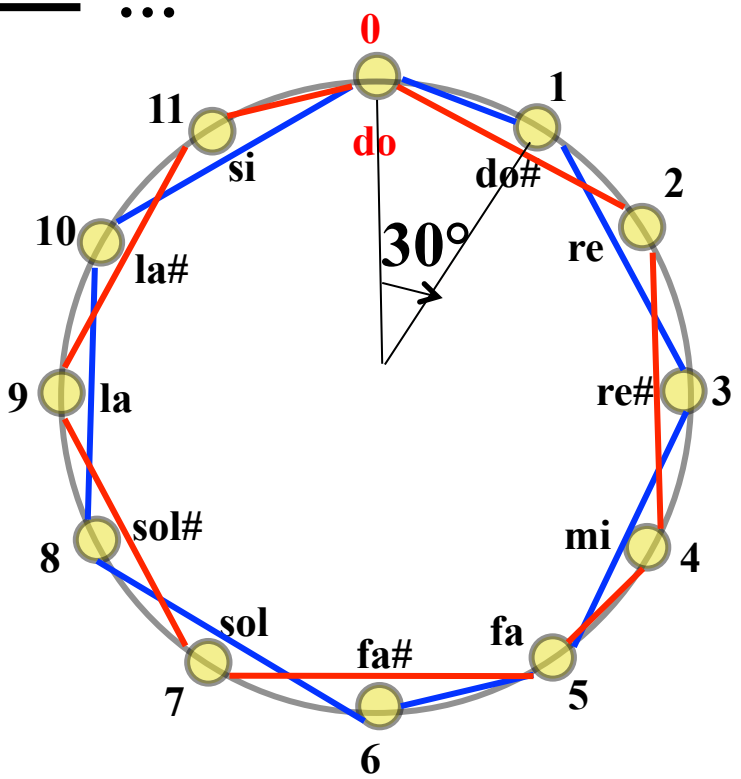




Les transpositions sont des additions...

Do maj = {0,2,4,5,7,9,11} +1
Do# maj = {1,3,5,6,8,10,0}





... ou des rotations !

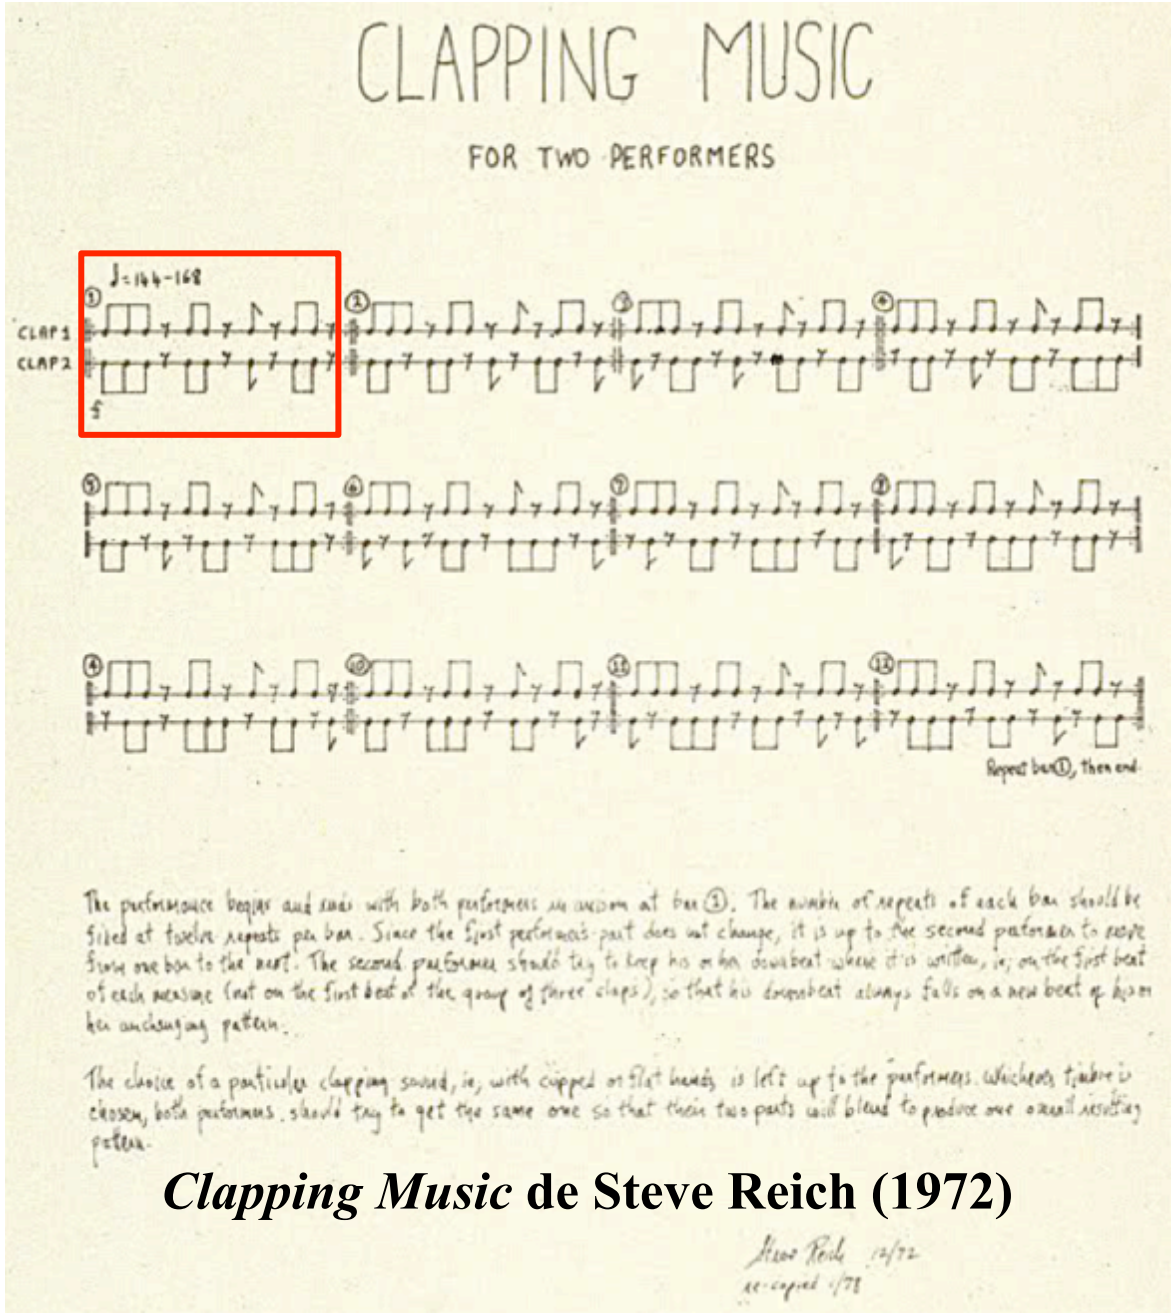
Six Bagatelles
(G. Ligeti, 1953)

Varietas, seu Combinatio quatuor notarum.

Le « cercle rythmique » et ses rotations



CLAPPING MUSIC

FOR TWO PERFORMERS

♩=144-168

CLAP 1

CLAP 2

Repeat bar ①, then end

The performance begins and ends with both performers in unison at bar ③. The number of repeats of each bar should be fixed at twelve repeats per bar. Since the first performer's part does not change, it is up to the second performer to move from one bar to the next. The second performer should try to keep his or her downbeat where it is written, i.e. on the first beat of each measure (not on the first beat of the group of three claps), so that his downbeat always falls on a new beat of his or her unchanging pattern.

The choice of a particular clapping sound, i.e. with cupped or flat hands, is left up to the performers. Whichever timbre is chosen, both performers should try to get the same one so that their two parts will blend to produce one overall resulting pattern.

Steve Reich 12/72

re-copied 1/73

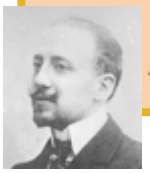
La

La fenêtre est entr'ouverte, sur le jardin.
Une heure passe, lente, somnolente.
Et elle, d'abord attentive, finit par s'endormir.
À cette voix qui là-bas se lamente,
Qui se lamente au fond de ce jardin.

Ce n'est qu'une voix d'eau sur la pierre,
Et combien de fois, combien de fois entendue !
Cet amour et cette heure s'abîment dans cette vie
Comme s'abîment dans l'onde sans fin
Le cadavre et la pierre liés ensemble.

Elle détend son angoisse dans le sommeil.
Mais l'angoisse est forte, et le sommeil est si léger !
(La lumière d'avril ressemble presque à une neige
qui serait tiède.)
Et certes elle doit souffrir,
Vaguement souffrir, aussi dans le sommeil.



G. D'Annunzio (1863-1938)
