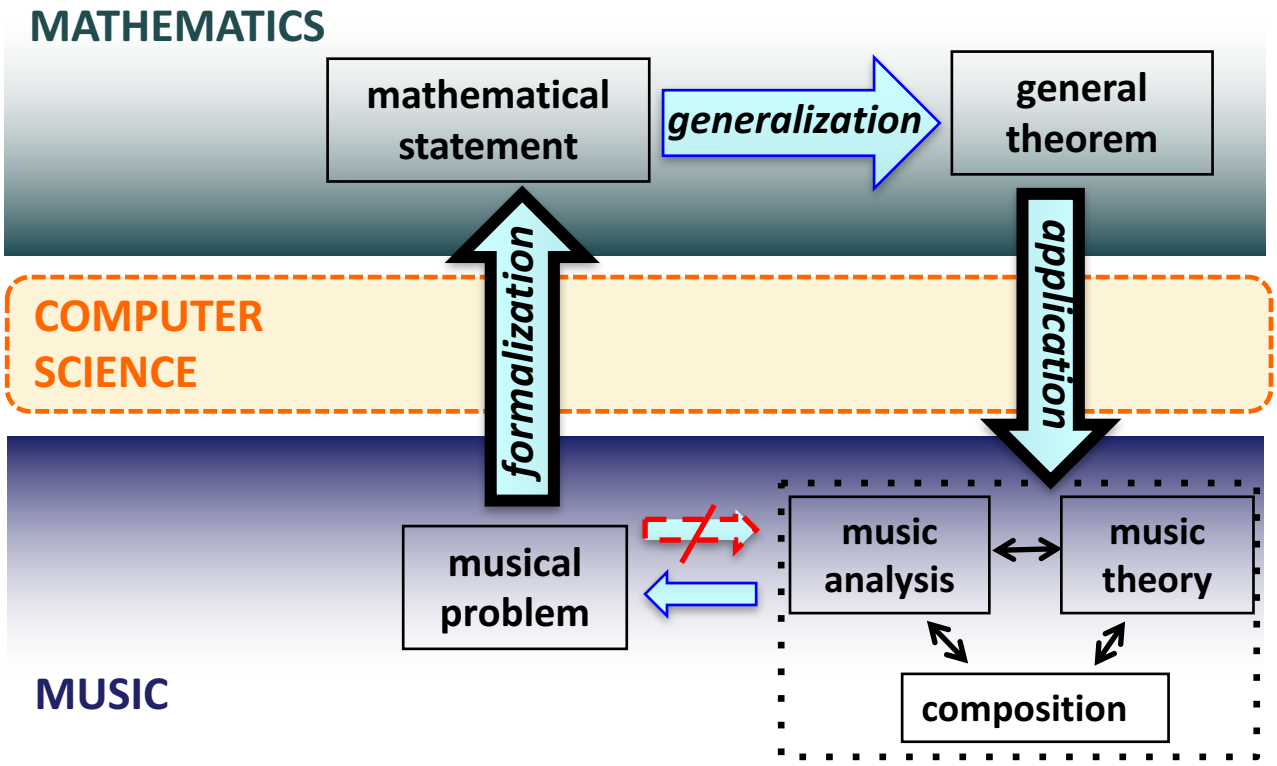
MathMusic research at the interface of three disciplines



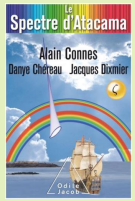
The Structural Music Information Research Project (2017-2019)

Society for Mathematics and Computation in Music

Mathematics

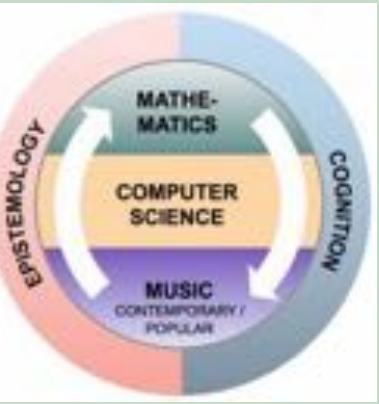
- IRMA (université de Strasbourg)
  - Main hosting institution

- IHES (Paris)
  - Working group on category and topos theory and music (avec A. Connes, P. Cartier, O. Caramello, Ch. Alunni)



- IRCAM (STMS Lab)
  - Master ATIAM Program
  - *OpenMusic*, *Hexachord*, ...

Computational Musicology



Popular music / art music

- GREAM (université de Strasbourg)
  - Course on mathematical and computational models in popular music

- USIAS (institut d'études avancées)
  - *Fellowship*

Epistemology and Cognition

- GDR ESARS (CNRS)
  - Math'n Pop

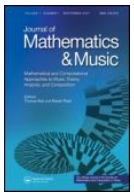
The *Society for Mathematics and Computation in Music*

Conferences:

- 2007 Technische Universität (Berlin, Allemagne)
- 2009 Yale University (New Haven, USA)
- 2011 Ircam (Paris, France)
- 2013 McGill University (Canada)
- 2015 Queen Mary University (Londres)
- 2017 UNAM (Mexico City)

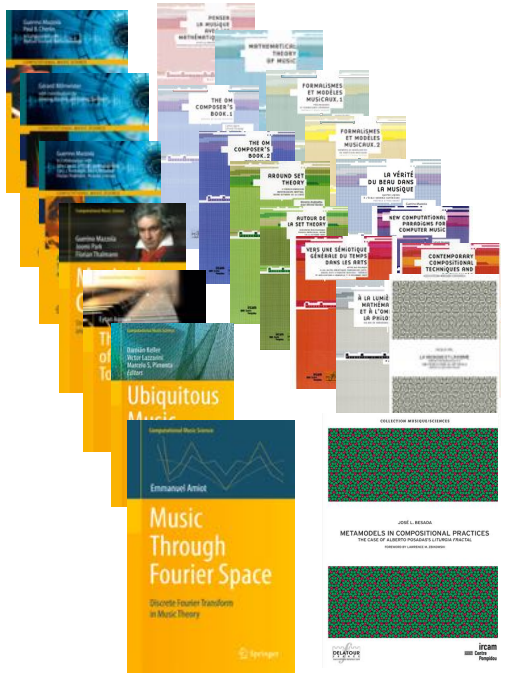
Official Journal:

- *Journal of Mathematics and Music*, Taylor & Francis (Editors : Th. Fiore & C. Callender),



Books Series:

- *Computational Music Sciences* Series, Springer (G. Mazzola & M. Andreatta eds. – 12 books published (since 2009)
- Collection *Musique/Sciences*, Ircam-Delatour France (J.-M. Bardez & M. Andreatta dir. – 16 books published (since 2006)



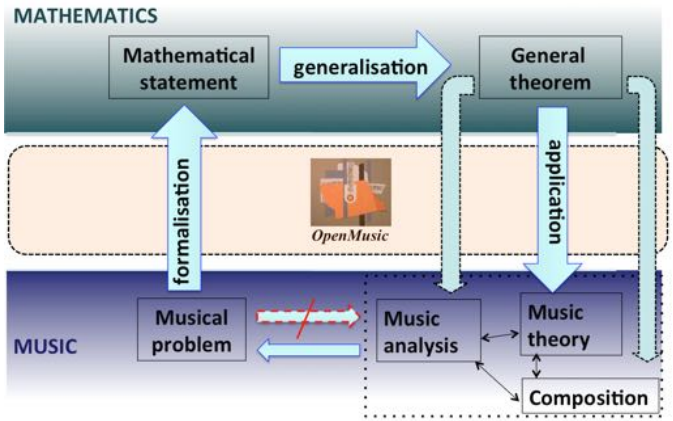
European Training Network on Computational and Mathematical Music Analysis and Generation ("InForMusic")

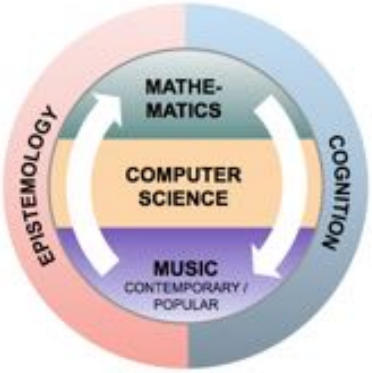
(Aalborg Universitet, City, University of London, Universiteit Utrecht, Aristotelio Panepistimio Thessalonikis, IRISA (UMR 6074), IRMA (UMR 7501), STMS (UMR 9912), Vrije Universiteit Brussel + Sony Europe Ltd, Chordify, Melodrive, Steinberg)

From MISA to SMIR

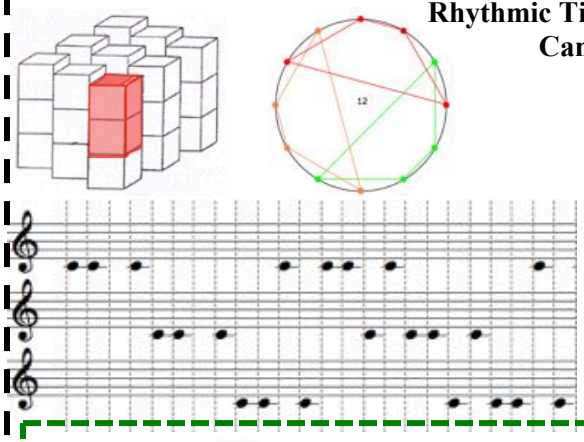
M. Andreatta : *Mathematica est exercitium musicae*, Habilitation Thesis, IRMA University of Strasbourg, 2010

- Tiling Rhythmic Canons
- *Z* relation and homometry
- Transformational Theory
- Music Analysis, SC and FCA
- Diatonic Theory and ME-Sets
- Periodic sequences and FDC
- Block-designs in composition

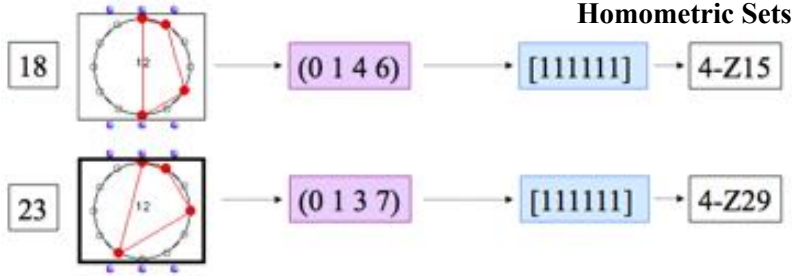


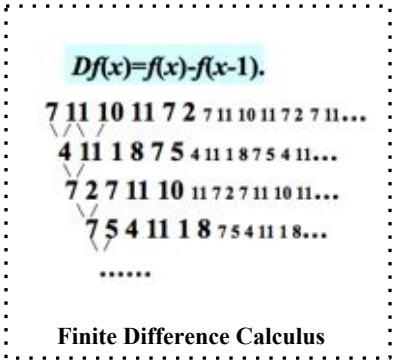


Rhythmic Tiling Canons



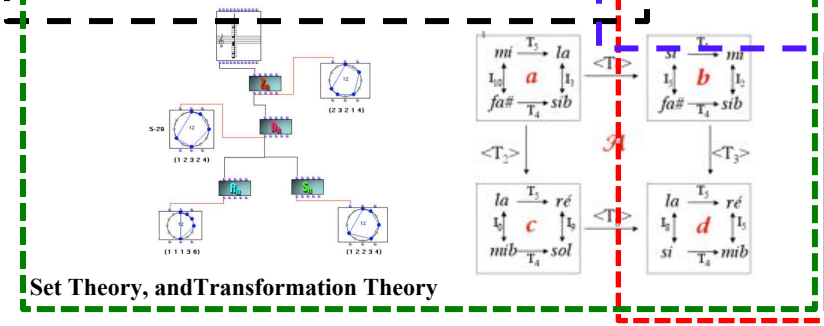
Z-Relation and Homometric Sets



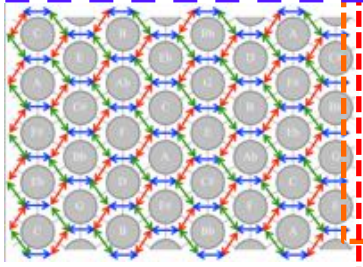


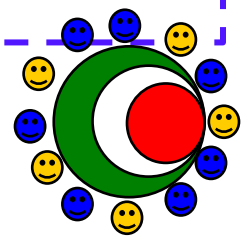
Finite Difference Calculus

Neo-Riemannian Theory and Spatial Computing

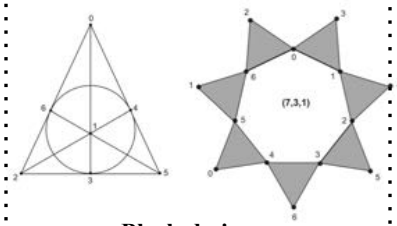


Set Theory, andTransformation Theory





Diatonic Theory and ME-Sets



Block-designs

The 4+1 main axes of the SMIR Project

- **Generalized Tonnetze, Persistent Homology and Style Analysis**
  - Sonia Cannas (PhD candidate, University of Pavia / Strasbourg)
  - Davide Stefani (PhD candidate, UPMC)
  - Corentin Guichaoua (post-doc IRMA/USIAS)
  - Pierre Guillot (Researcher, IRMA)
- **Mathematical Morphology and Formal Concept Analysis**
  - Isabelle Bloch (Télécom ParisTech)
  - Jamal Atif (University of Dauphine)
  - Carlos Agon (CNRS-IRCAM-UPMC)
  - Jean-Louis Giavitto (CNRS-IRCAM-UPMC)
  - Pierre Relaño (former Master student & composer, Conservatory of Strasbourg)
- **Category theory and Transformational Music Analysis**
  - Andrée Ehresmann (mathematician)
  - Alexandre Popoff (mathematical music theorist)
  - Tom Fiore (University of Michigan, Editor-in-chief of the JMM)
  - Thomas Noll (ESMuC, Barcelona, former Editor-in-chief JMM)
- **'Mathemusical' problems and open conjectures**
  - **Emmanuel Amiot** (mathematician and mathematical music theorist, LAMPS Perpignan)
  - **Franck Jedrzejewski** (mathematical music theorist, CEA)
  - **Alain Connes** and his maths/music working group (IHES)
- **Epistemology and Cognitive Musicology**
  - José-Luis Besada (post-doc GREAM/IRMA)
  - Nathalie Herold (post-doc GREAM)

$\langle I_k \rangle \cdot \langle I_m \rangle = \langle T_{m-k} \rangle$

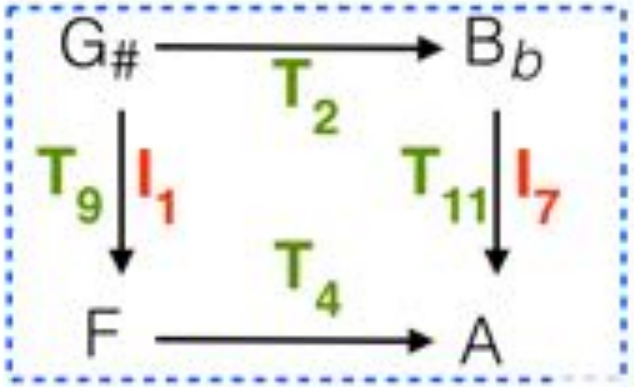
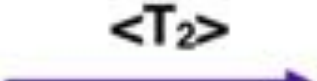
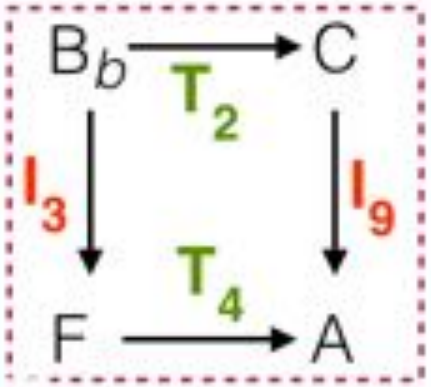
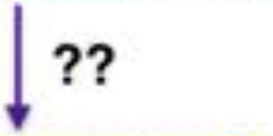
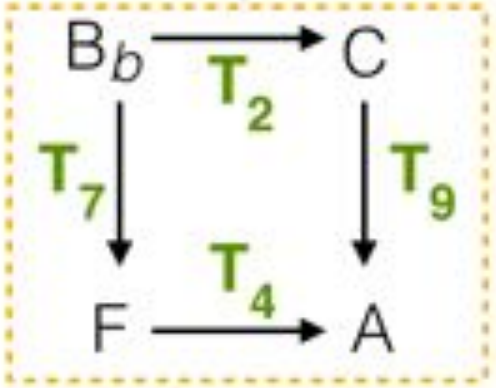
Some theoretical difficulties with the isographic relations

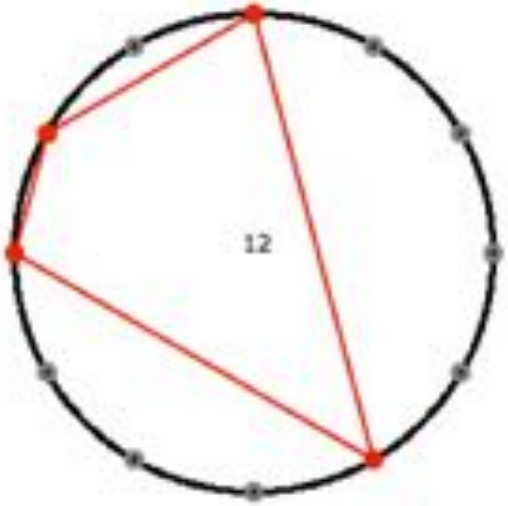








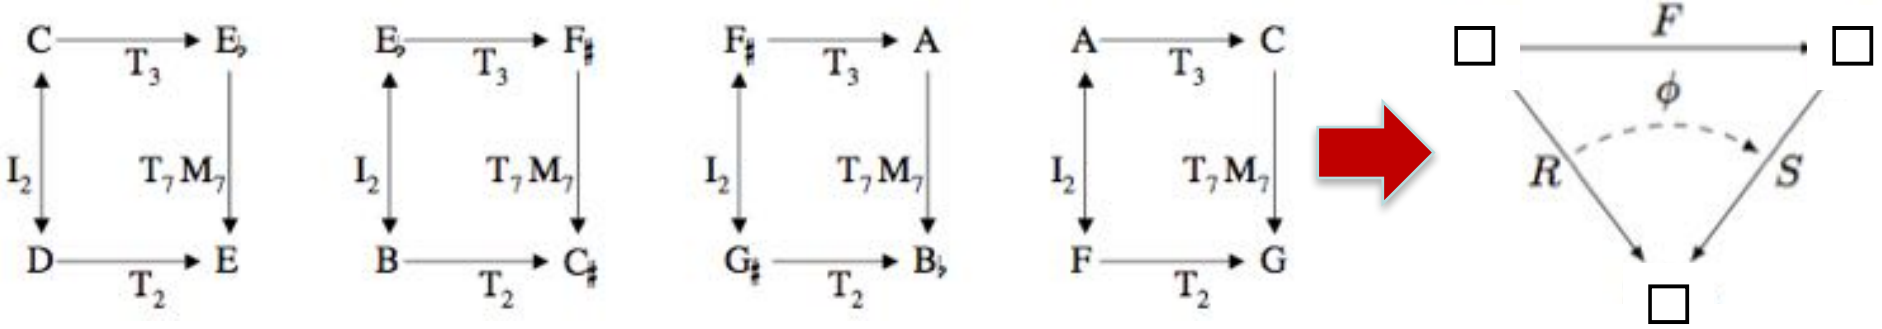




CONCLUSION

There are K-Nets which are not always isographic to a given one, i.e. the isographic relations are highly sensitives to the transformations used to label the arrows.
Is it possible to overstep this theoretical limitation? Which new definition of K-nets allows one to do that?

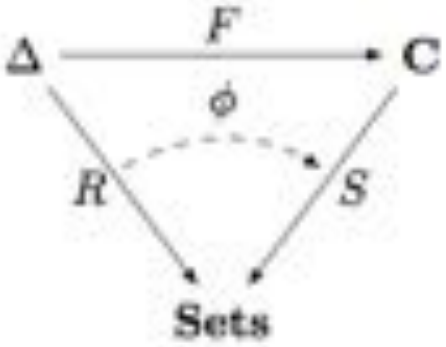
From K-Nets to category-based PK-Nets



Definition 1 *Let* **C** *be a category, and* S *a functor from* **C** *to the category* **Sets**. *Let* Δ *be a small category and* R *a functor from* Δ *to* **Sets**. *A PK-net of form* R *and of support* S *is a 4-tuple* (R, S, F, ϕ), *in which*

- F *is a functor from* Δ *to* **C**,
- *and* ϕ *is a natural transformation from* R *to* SF.

The definition of a PK-net is summed up by the following diagram:



Popoff A., M. Andreatta, A. Ehresmann, « A Categorical Generalization of Klumpenhouwer Networks », MCM 2015, Queen Mary University, Springer, p. 303-314

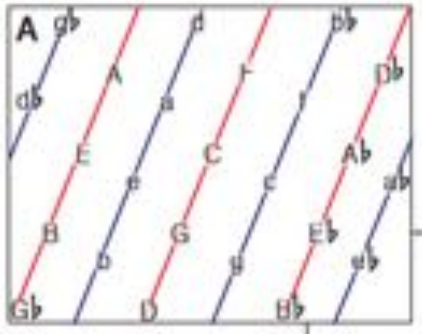
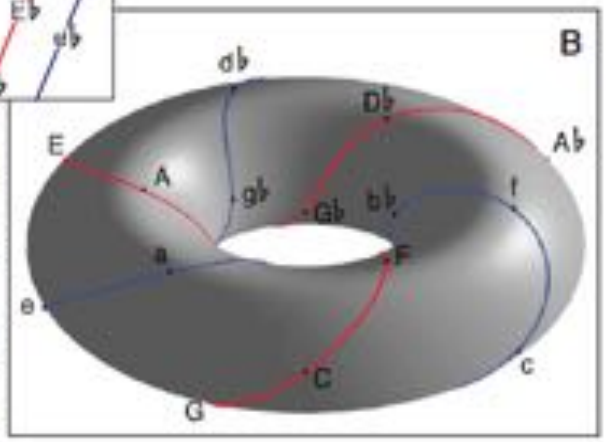
Neurosciences and Tonnetz



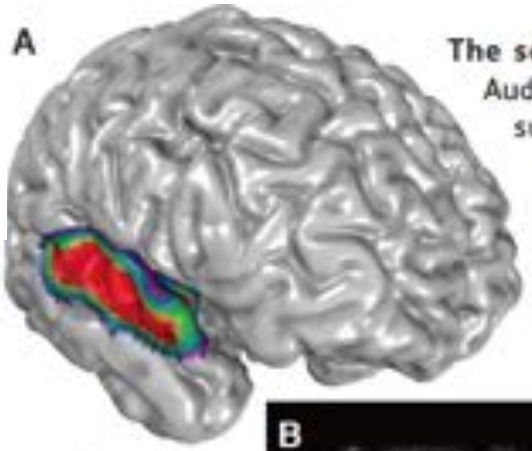
PERSPECTIVES: NEUROSCIENCE

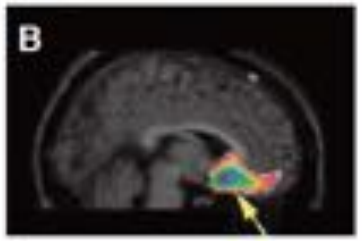
Mental Models and Musical Minds

Robert J. Zatorre and Carol L. Krumhansl

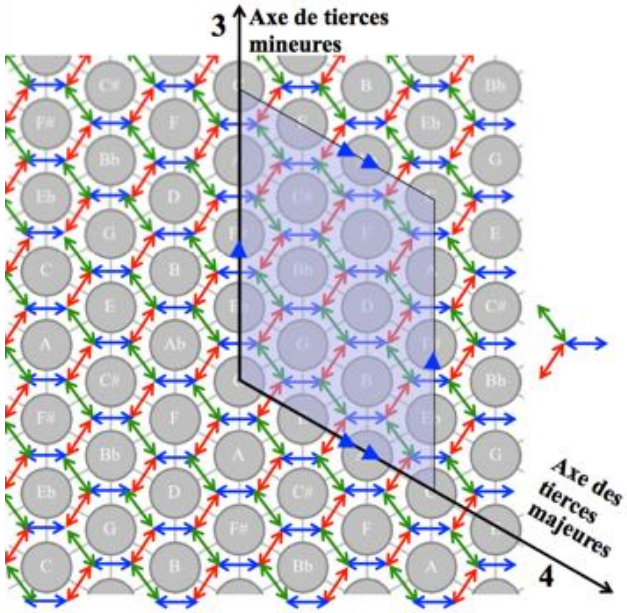


Mental key maps. (A) Unfolded version of the key map, with opposite edges to be considered matched. There is one circle of fifths for major keys (red) and one for minor keys (blue), each wrapping the torus three times. In this way, every major key is flanked by its relative minor on one side (for example, C major and a minor) and its parallel minor on the other (for example, C major and c minor). (B) Musical keys as points on the surface of a torus.





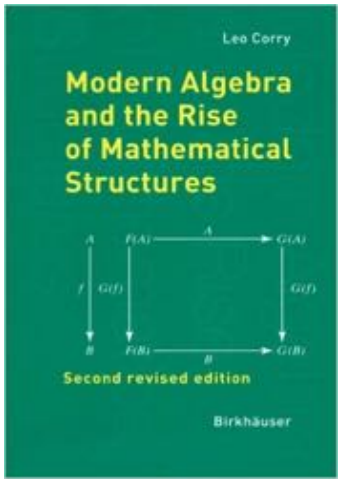
The sensation of music. (A) Auditory cortical areas in the superior temporal gyrus that respond to musical stimuli. Regions that are most strongly activated are shown in red. (B) Metabolic activity in the ventromedial region of the frontal lobe increases as a tonal stimulus becomes more consonant.

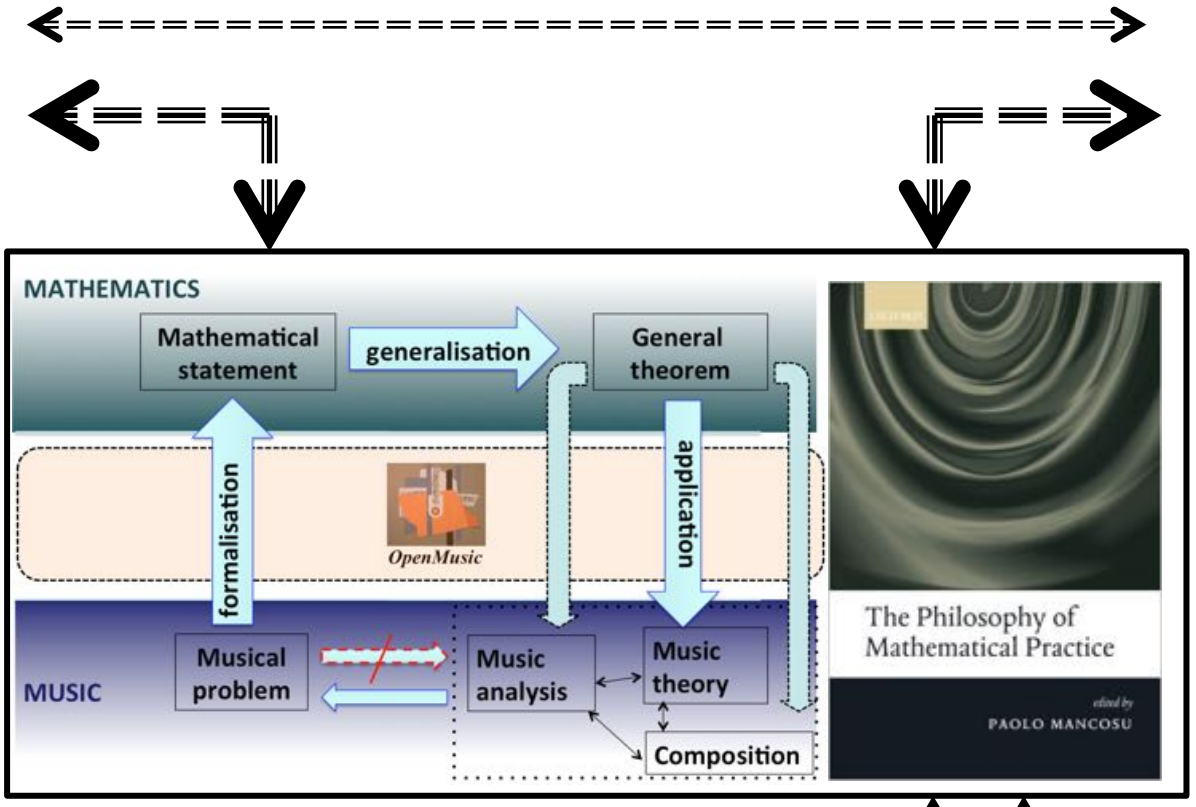


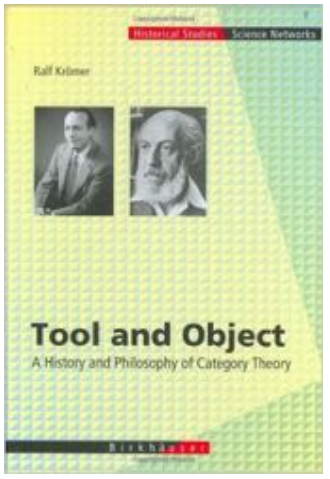
Acotto E. et M. Andreatta (2012), « Between Mind and Mathematics. Different Kinds of Computational Representations of Music », *Mathematics and Social Sciences*, n° 199, 2012(3), p. 9-26.

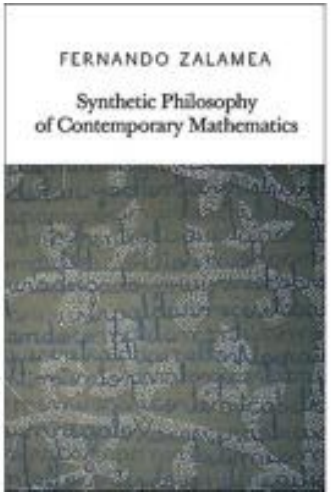
EMPG European Mathematical Psychology Group

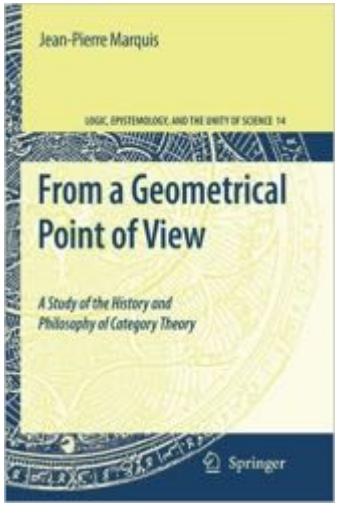
Which type of philosophy for the *mathemusical* practice?



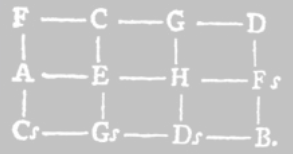








*A **synthetic** vision allows us to link together apparently distant strata of mathematics and culture, helping us to break down many artificial barriers. Not only can today's mathematics be appreciated through epistemic, ontic, phenomenological and aesthetic modes, but in turn, it should help to transform **philosophy.***



THANK YOU FOR YOUR ATTENTION
