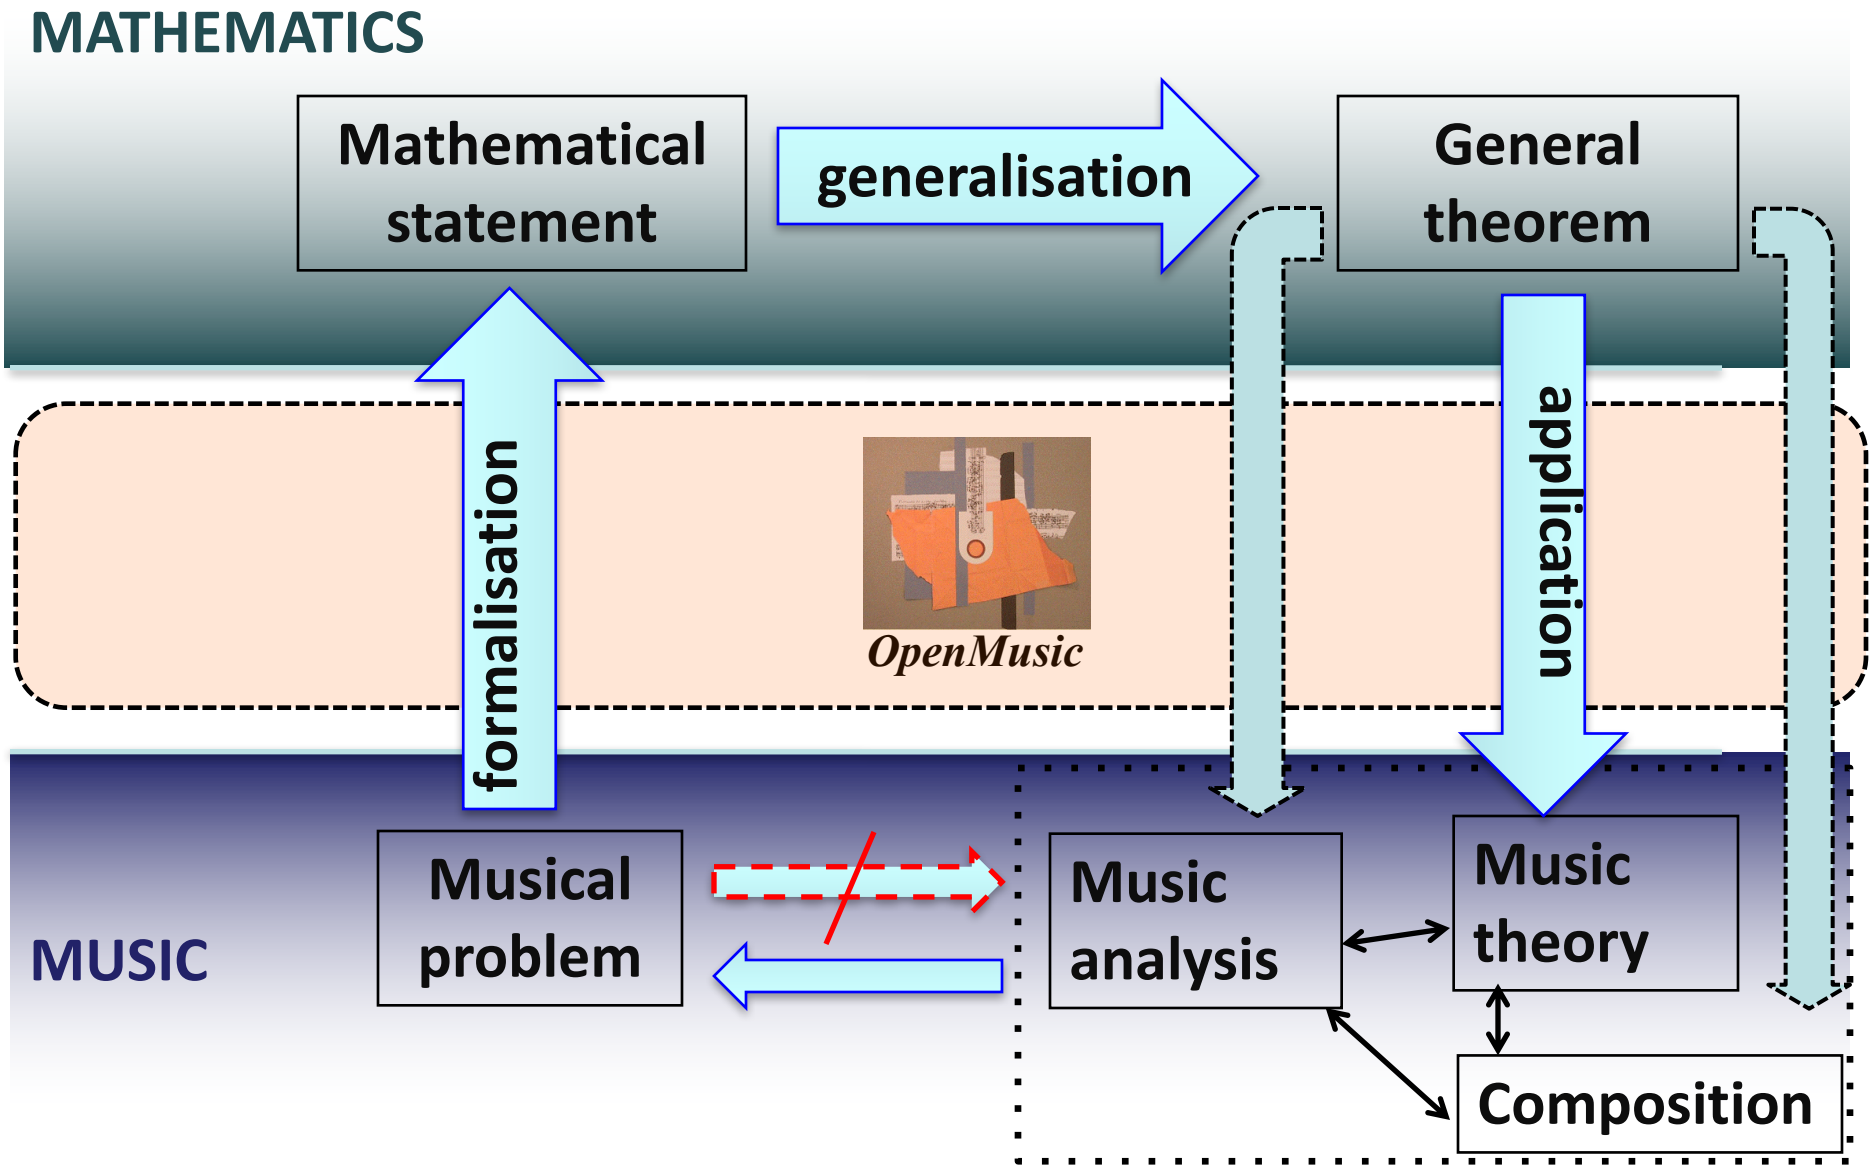
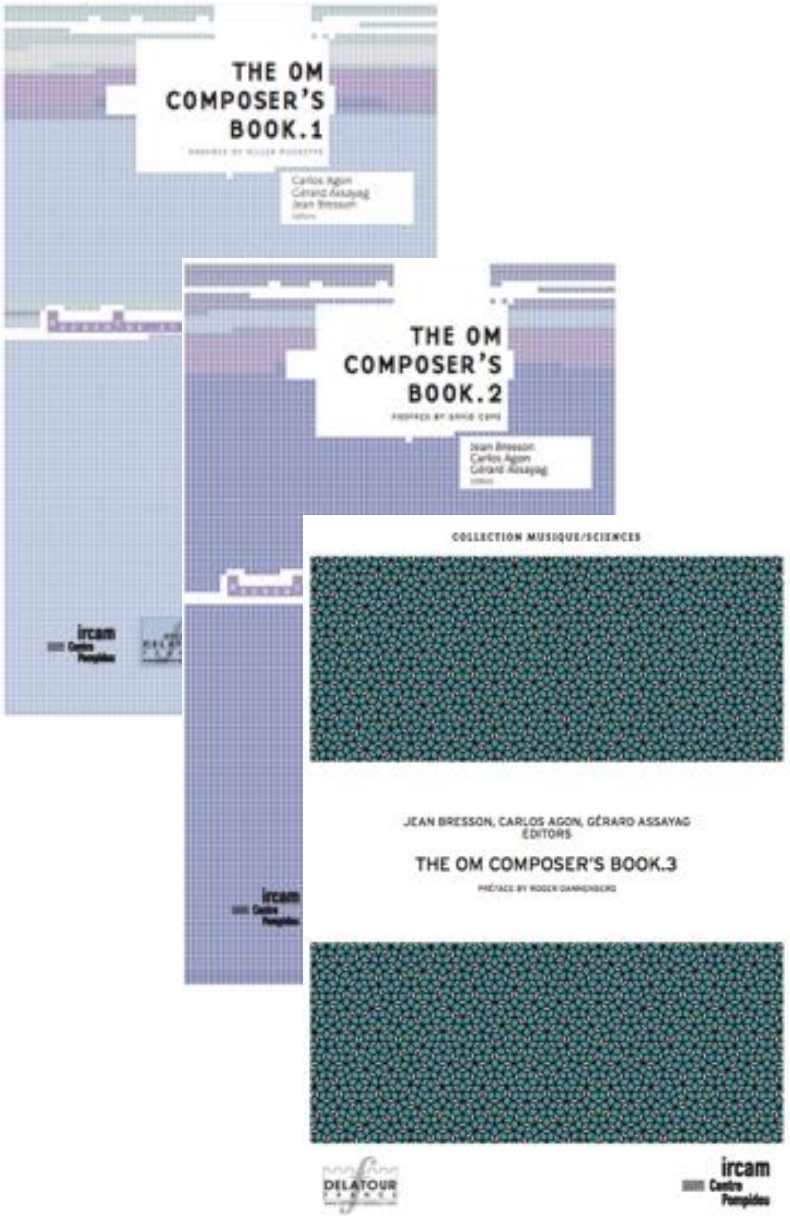
# The double movement of a ‘mathemusical’ activity



# OpenMusic, a Visual Programming Language for computer-aided composition

www.repmus.ircam.fr/openmusic/home



**C. Agon, G. Assayag and J. Bresson, *The OM Composer's Book* (3 volumes) "Musique/Sciences" Series, Ircam/Delatour, 2006, 2007 and 2016**

# "MathTools": an algebraic environment within OpenMusic visual programming language

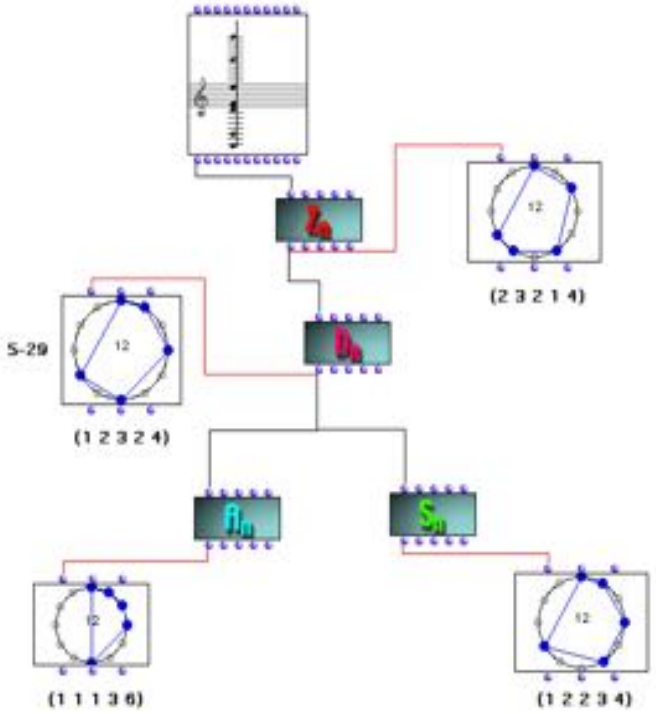
OM=♬+∑

## Computational Music Theory:

- Classification and Enumeration of musical structures
  - Chords/scales, motifs and rhythms:
    - ♬ Catalogues (Costère, Zalewski, Vieru, Forte, Carter, Morris, Mazzola, Estrada, …)
    - ∑ Combinatorial algebra, Polya Enumeration Theory, Burnside Lemma, Discrete Fourier Transform
  - Rhythmic Tiling Canons (by translation, inversion and augmentation)
    - ♬ Messiaen, Vieru, Levy, Johnson, Bloch, Wild, Lanza, Ghisi, …
    - ∑ Group and ring factorization theory and Discrete Fourier Transform (DFT)

## Computational Music Analysis:

- *Set Theory,* Transformational Analysis and Sieve Theory
  - Pitch-class sets, interval vectors and IFUNC, Z-relations:
    - ♬ Carter, Vieru, Xenakis
    - ∑ Group Actions, Homometry, DFT
  - Transformational progression/network, *K-nets*
    - ♬ Generalized Interval Systems (David Lewin)
    - ∑ Group action and category theory



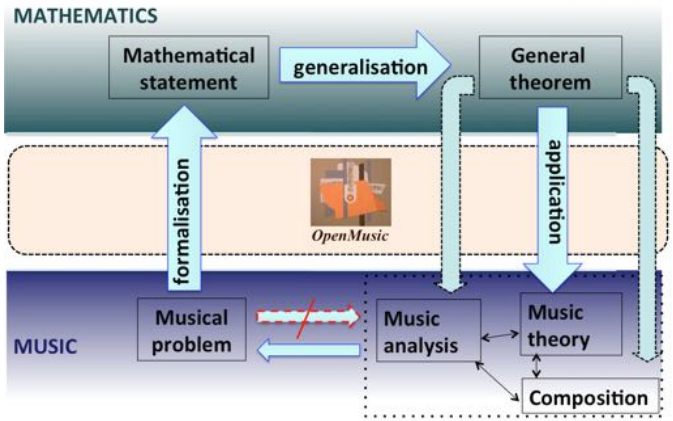
## Computer Aided-Composition:

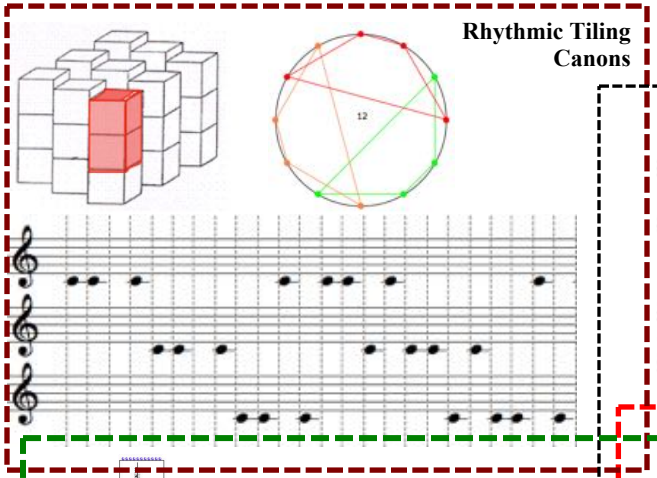
- Scales, modes, chords manipulation
- Rhythmic structures organizations

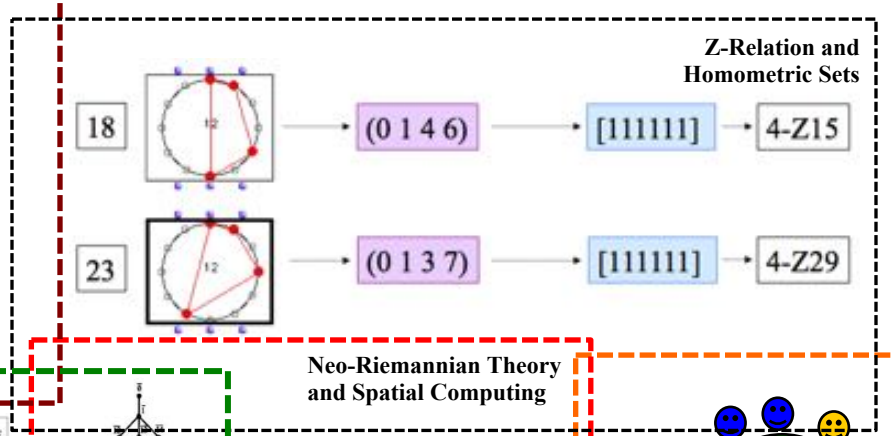
# Some examples of ‘mathemusical’ problems

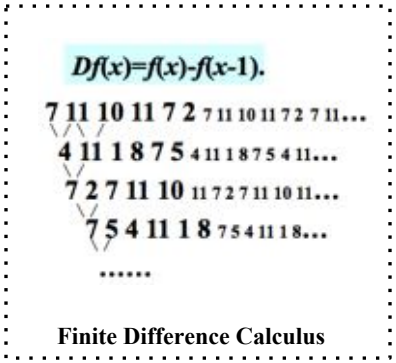
**M. Andreatta: *Mathematica est exercitium musicae*, Habilitation Thesis, IRMA University of Strasbourg, 2010**

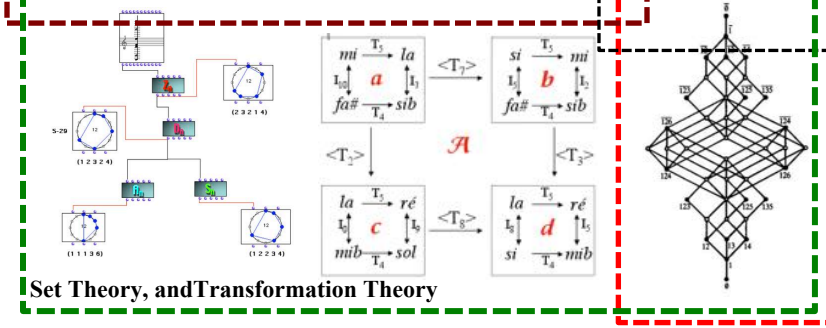
- The construction of Tiling Rhythmic Canons
- The *Z* relation and the theory of homometric sets
- *Set Theory* and Transformational Theory
- Neo-Riemannian Theory, Spatial Computing and FCA
- Diatonic Theory and Maximally-Even Sets
- Periodic sequences and finite difference calculus
- Block-designs and algorithmic composition

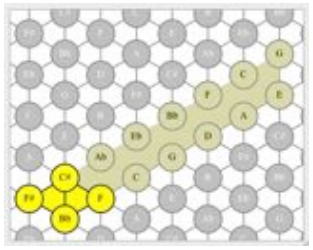


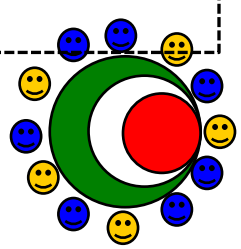


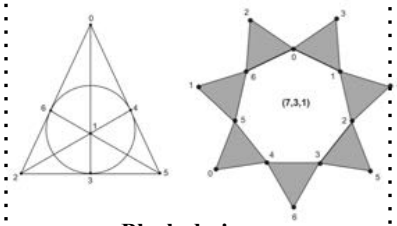




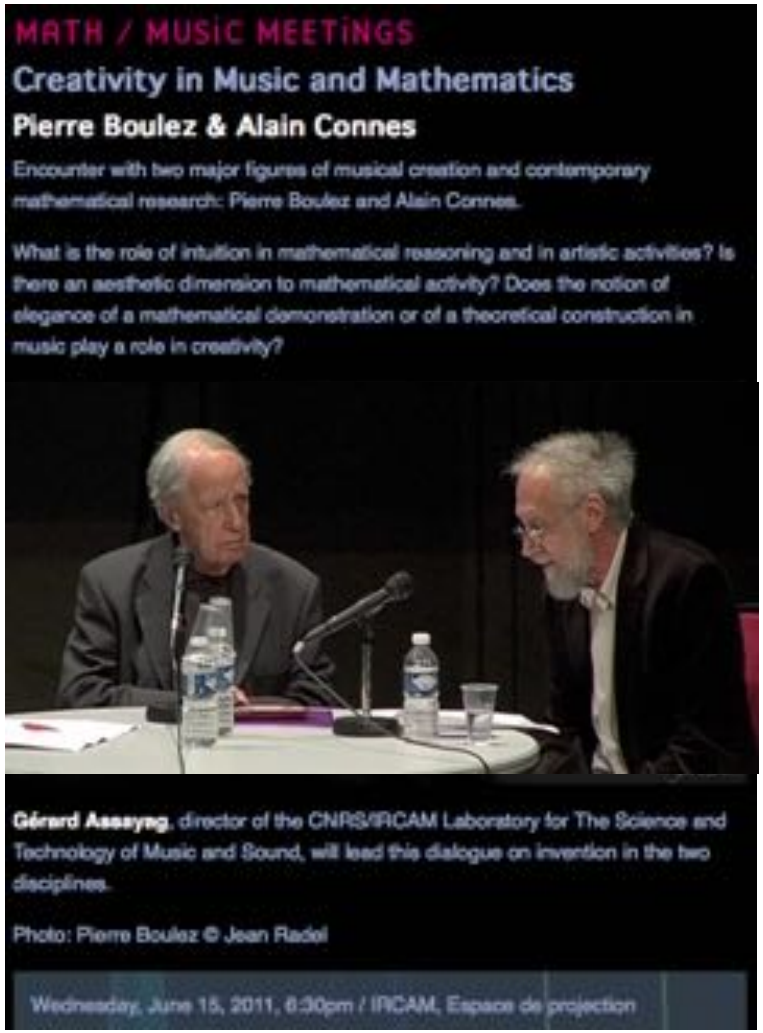








# The interplay between algebra and geometry in music



➔ `http://agora2011.ircam.fr`

"Concerning **music**, it takes place in **time**, like **algebra**. In **mathematics**, there is this fundamental duality between, on the one hand, **geometry** – which corresponds to the visual arts, an immediate intuition – and on the other hand **algebra**. This is not visual, it has a temporality. This fits in time, it is a computation, something that is very close to the language, and which has its diabolical precision. [...] **And one only perceives the development of algebra through music**" (A. Connes).

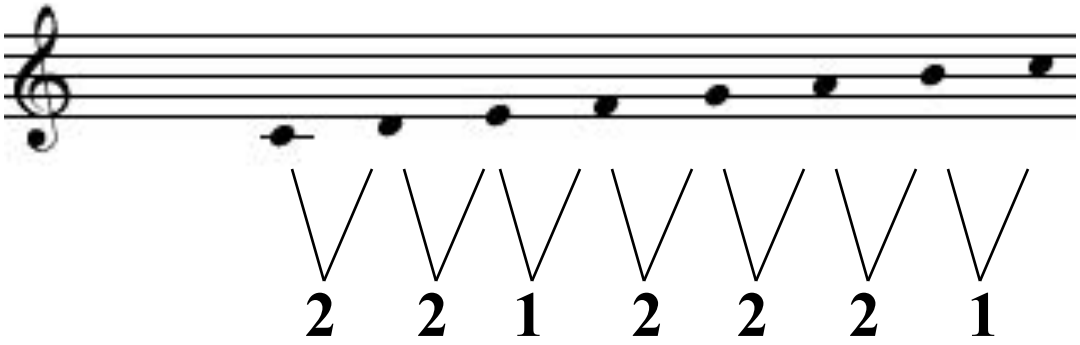
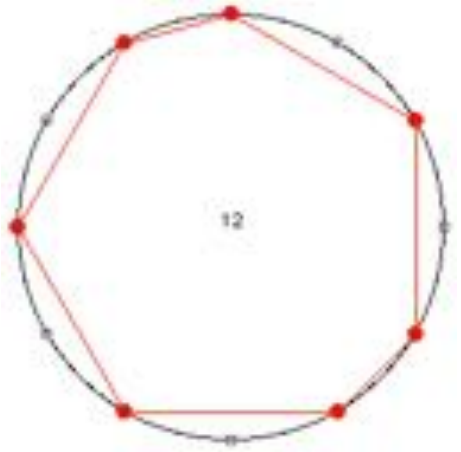
***The « inversions » of a chord are all circular permutations on an intervallic structure***





# The pitch-rhythm *mystic* isomorphic correspondence

"**These modes** [of Limited Transpositions] **realize in the vertical direction** (transposition) **what non-retrogradable rhythms realize in the horizontal direction** (retrogradation). In fact, these modes *cannot be transposed* beyond a certain number of transpositions without falling again into the same notes, enharmonically speaking; likewise, these rhythms *cannot be read in a retrograde sense* without one's finding again exactly the same order of values as in the right sense. These modes cannot be transposed because they are—without polytonality—in the modal atmosphere of several keys at once and contain in themselves small transpositions; these rhythms cannot be retrograded because they contain in themselves small retrogradations. These modes are divisible into symmetrical groups; these rhythms, also, with this difference: the symmetry of the rhythmic groups is a retrograde symmetry. Finally, the last note of each group of these modes is always *common* with the first of the following group; and the groups of these rhythms frame a central value *common* to each group. **The analogy is now complete**".

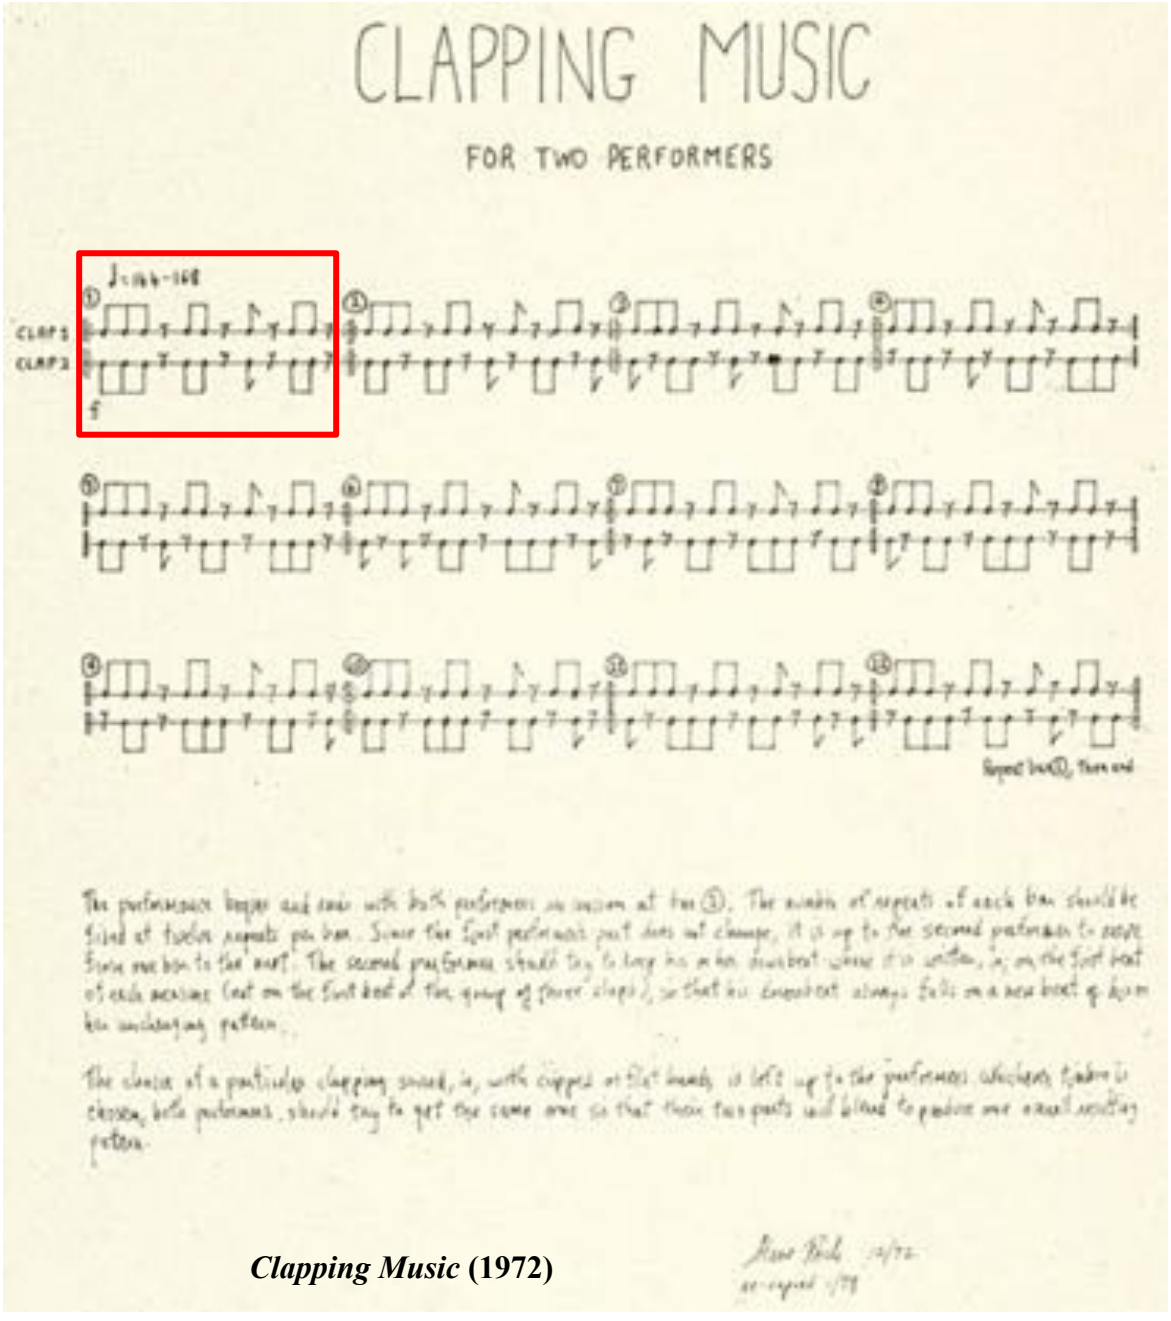
# Cyclic permutations in minimalistic music



CLAPPING MUSIC

FOR TWO PERFORMERS

CLAP 1
CLAP 2

The performance begins and ends with both performers in unison at bar ①. The number of repeats of each bar should be fixed at twelve repeats per bar. Since the first performer's part does not change, it is up to the second performer to cue from one bar to the next. The second performer should try to stay his or her slowbeat where it is written, i.e. on the first beat of each sections (not on the first beat of the group of seven claps), so that his counterpart always falls on a new beat of their oscillating pattern.

The choice of a particular clapping sound, i.e. with clapped or flat hands is left up to the performers whichever pattern is chosen, both performers should try to get the same one so that these two parts will blend to produce one overall rhythmic pattern.

***Clapping Music*** **(1972)**

## Als Gregor und Griselda

Kanon für 6 Stimmen (auch Amateure)
(deutsche Fassung)

Fabien Lévy

*Auftrag des Rümlingen Festivals*
*à Melba Fenouil*

Dieser Kanon folgt das mathematische Prinzip des "Vuza-Kanons". Ich bedanke Moreno Andreatta, von Ircam, für seine Hilfe, um diesen Vuza-Kanon zu rechnen, und Melba Fenouil für die deutsche Fassung des Textes.

### Phonetisches Alphabet

**Konsonanten**

b : Bad
s : Sellerie
k : Käse
d : Datum
f : Fön
g : Sagen
ʒ : jolie
l : Lärm
m : Mutti
n : Nein
ɲ : agneau
p : Punkt
ʁ : Relevant
t : Tanken
v : Wagon, Witwe
z : Süsse, sagen
ʃ : Kirsche

**Halbe-Konsonanten (oder halbe-Vokalen)**

j : jodeln
w : fouet (/fwɛ/), voir (/vwaʁ/)
ɥ : Suite (/sɥita/)

**Vokalen**

a : Papa
ɑ : Kartoffeln
ə : wieder
ø : Fön
œ : Fleur
e : Merit
ɛ : fern
o : Oktopus
ɔ : Ort
i : wieder
u : du, Suppe
y : lügen

**Nasale Vokalen**

ɑ̃ : rang, avant
ɛ̃ : rein, brin, pain
ɔ̃ : bon, ton
œ̃ : brun, un

## Le Blé en Herbe

(Polo/Moreno/Dieu)

Plonger comme un enfant, cheveux au vent
Sous l'océan du blé en herbe
Marée d'épis couleur d'amande
Qui tendent à caresser le ciel

Algues tendres de mille plages
Frôlant le ventre des nuages
Cheveux de pluie, dos de poissons
Qui frissonnent à l'unisson

Suivre le bord des continents
Dans l'océan du blé en herbe
Pêcher le corail du pavot
Dans le sang des coquelicots

Croiser matin dans l'herbe folle
Deux tourterelles qui s'envolent
Suivre les jeux des hirondelles
Sur le paysage éternel
Nager comme un enfant, cheveux au vent
Sous l'océan
Du blé en herbe

Marée de fruits au goût amer
Acide et salée comme la mer

Vers l'îlôt d'un petit village
Vers un château d'eau sur la plage
Quand tout s'éteint avant l'orage
Quand se lève le vent du large
Sur le blé vert

*Socchiusa è la finestra, sul giardino.*
*Un'ora passa lenta, sonnolenta.*
*Ed ella, ch'era attenta, s'addormenta*
*A quella voce che già si lamenta,*
*Che si lamenta in fondo a quel giardino.*

*Non è che voce d'acque su la pietra:*
*E quante volte, quante volte udita!*
*Quell'amore e quell'ora in quella vita*
*S'affondan come ne l'onda infinita*
*Stretti insieme il cadavere e la pietra.*

*Ella stende l'angoscia sua nel sonno.*
*L'angoscia è forte, e il sonno è così lieve!*
*(Par la luce d'april quasi una neve*
*che sia tiepida.)*
*Ed ella certo deve soffrire,*
*Vagamente, anche nel sonno.*

**La sera non è più la tua canzone**
**(Mario Luzi, 1945, in *Poesie sparse*)**

**La sera non è più la tua canzone,**
**è questa roccia d’ombra traforata**
**dai lumi e dalle voci senza fine,**
**la quiete d’una cosa già pensata.**

**Ah questa luce viva e chiara viene**
**solo da te, sei tu così vicina**
**al vero d’una cosa conosciuta,**
**per nome hai una parola ch’è passata**
**nell’intimo del cuore e s’è perduta.**

**Caduto è più che un segno della vita,**
**riposi, dal viaggio sei tornata**
**dentro di te, sei scesa in questa pura**
**sostanza così tua, così romita**
**nel silenzio dell’essere, (compiuta).**

**L’aria tace ed il tempo dietro a te**
**si leva come un’arida montagna**
**dove vaga il tuo spirito e si perde,**
**un vento raro scivola e ristagna.**

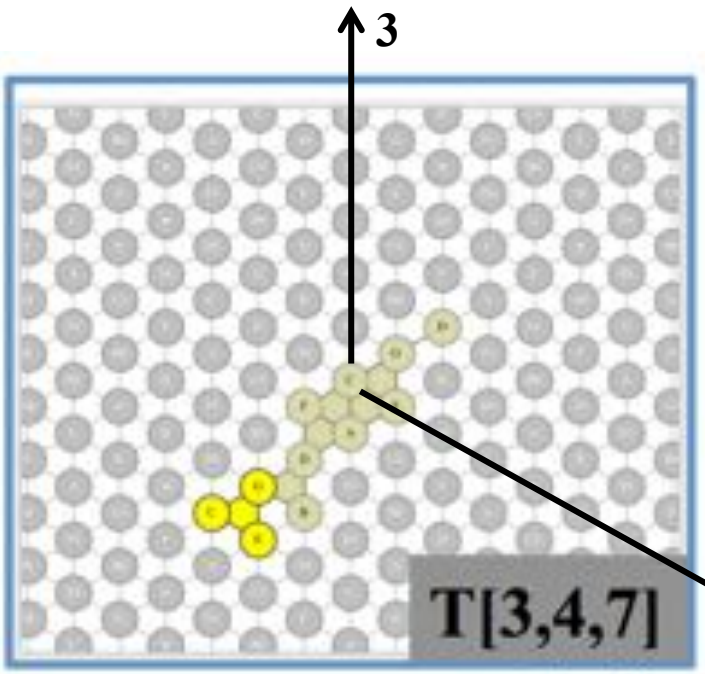
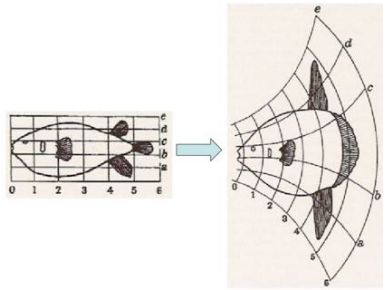
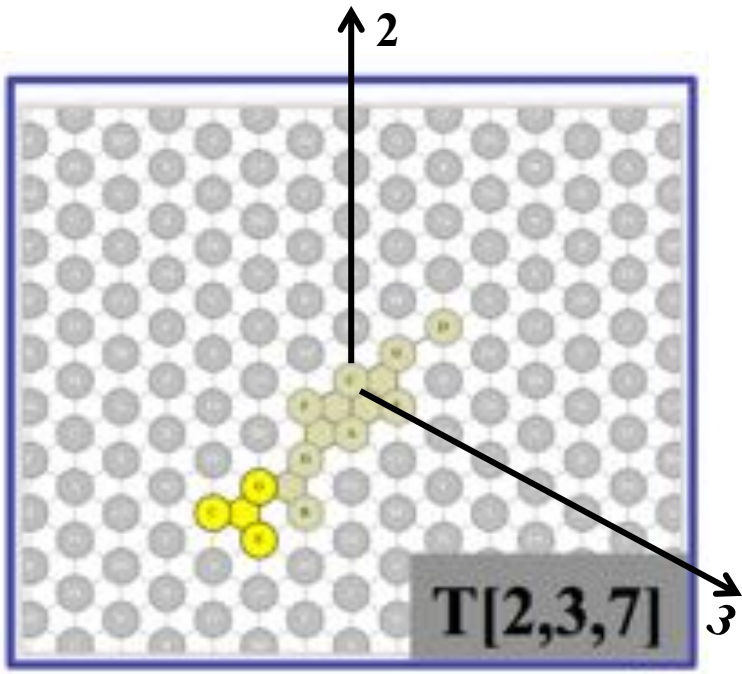
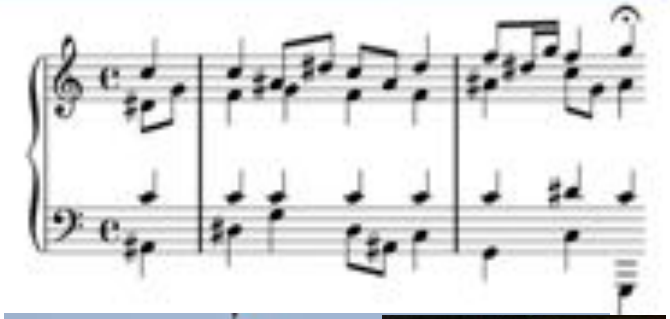
# The musical style...is the space!

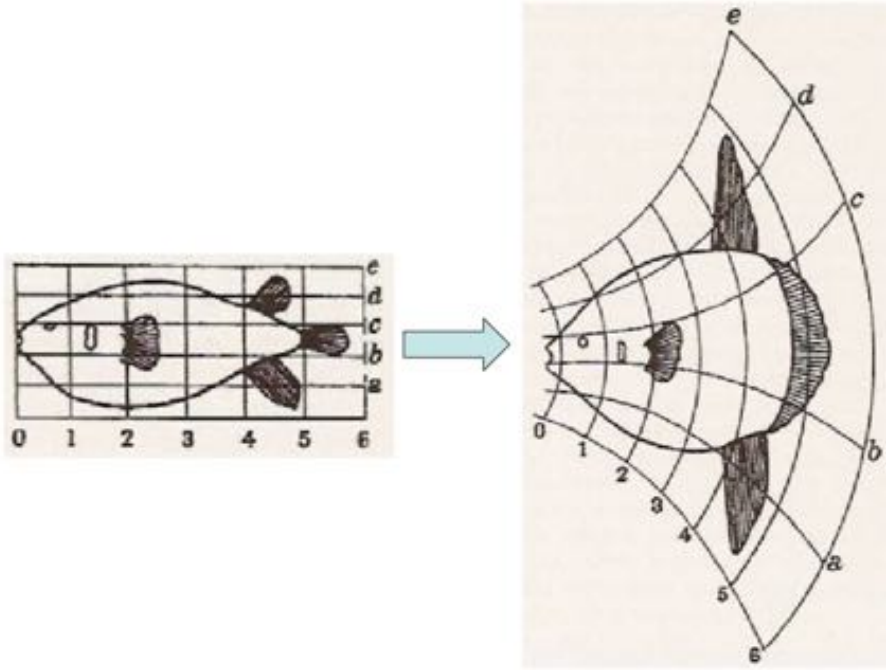


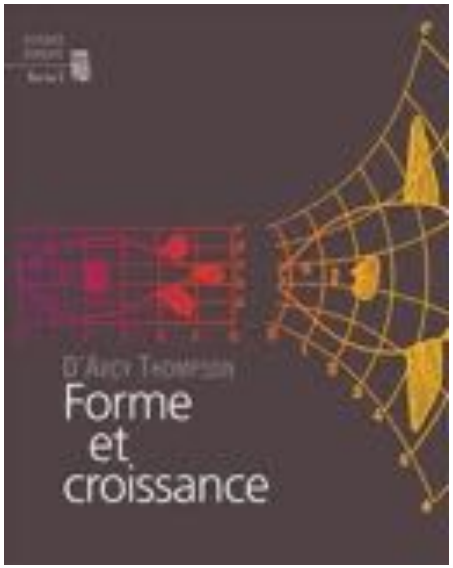






# The morphological genealogy of structuralism





« [La notion de **transformation**] me vient d'un ouvrage qui a joué pour moi un rôle décisif et que j'ai lu pendant la guerre aux États Unis: *On Growth and Form*, en deux volumes, de D'Arcy Wentworth Thompson, paru pour la première fois en 1917. L'auteur, naturaliste écossais, (...) interprétait comme des transformations les différences visibles entre les espèces ou organes animaux ou végétaux au sein d'un même genre. Ce fut une illumination, d'autant que j'allais vite m'apercevoir que cette façon de voir s'inscrivait dans une longue tradition: derrière Thompson, il y avait la botanique de Goethe, et derrière Goethe, Albert Dürer avec son Traité de la proportion du corps humain » (Lévi-Strauss et Eribon, 1988).

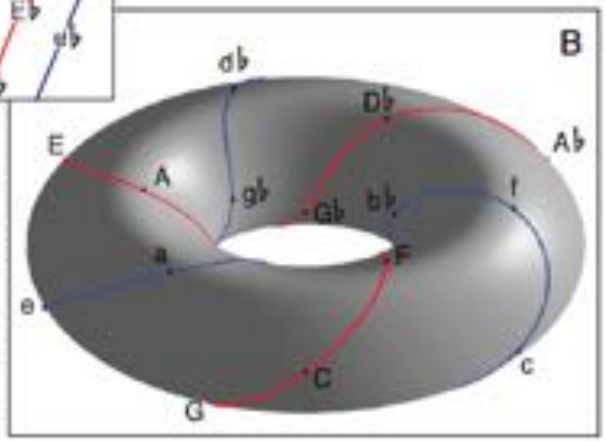
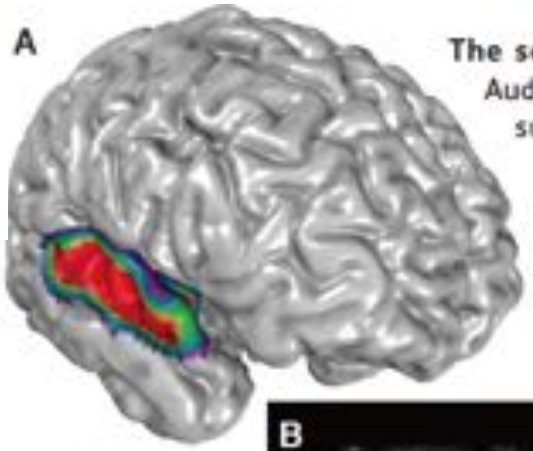
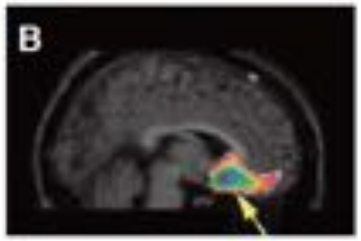
## Mental Models and Musical Minds

Robert J. Zatorre and Carol L. Krumhansl



**Mental key maps.** (A) Unfolded version of the key map, with opposite edges to be considered matched. There is one circle of fifths for major keys (red) and one for minor keys (blue), each wrapping the torus three times. In this way, every major key is flanked by its relative minor on one side (for example, C major and a minor) and its parallel minor on the other (for example, C major and c minor). (B) Musical keys as points on the surface of a torus.





**The sensation of music.** (A) Auditory cortical areas in the superior temporal gyrus that respond to musical stimuli. Regions that are most strongly activated are shown in red. (B) Metabolic activity in the ventromedial region of the frontal lobe increases as a tonal stimulus becomes more consonant.

« Il ne faut toutefois pas oublier que le principe même de la méthode réside dans la volonté de construire le lacis de telle sorte que les relations musicales élémentaires effectives, donc 'en-temps', (analysées ou composées, mélodiques ou accordiques) soient les plus **serrées** possibles, s'expriment principalement entre notes **voisines** du réseau, dans un sens ou dans l'autre.
Ajoutons encore que l'on peut passer de certains réseaux à certains autres en faisant simplement 'basculer' les axes [...] ce qui modifie les rapports de proximité structurelle entre les notes et donc la hiérarchie de leurs intervalles ».
