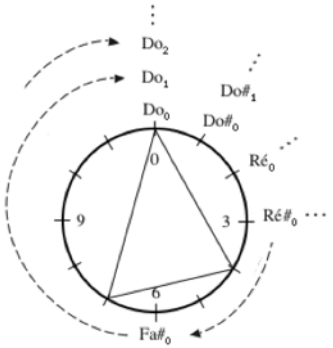
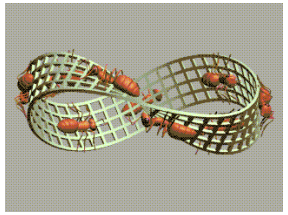
cnrs

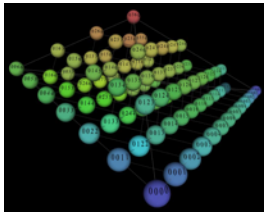
UPMC SORBONNE UNIVERSITÉS

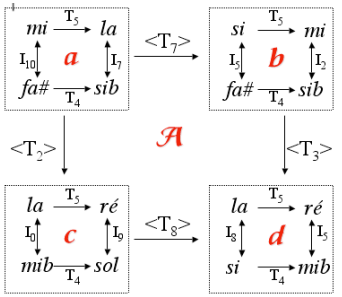
Plan du cours

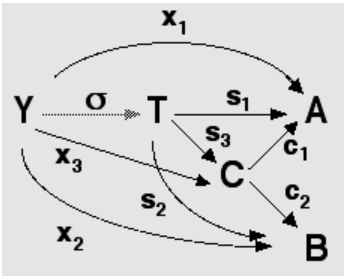
1.) Rappel historique et premiers éléments de musicologie computationnelle
2.) Représentation et énumération des structures musicales : *Set* Theory et théories transformationnelles
3.) Pavages en composition : la construction des canons rythmiques mosaïques
4.) Ramifications philosophiques et cognitives de l'approche algébrique en musique

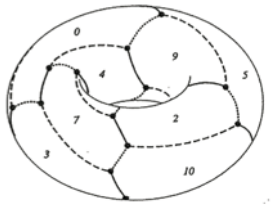


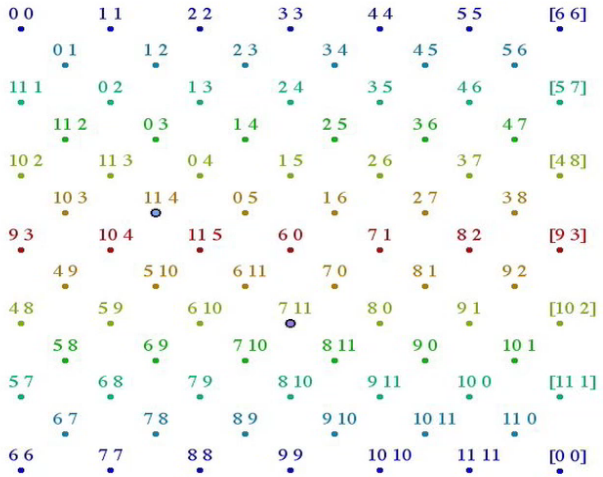


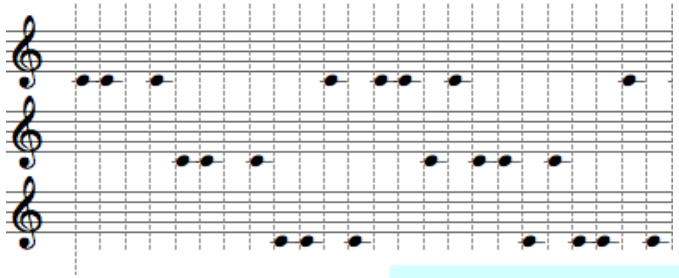


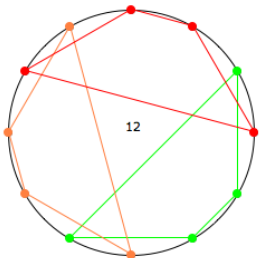


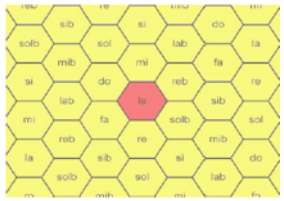












$Df(x)=f(x)-f(x-1).$

$$
\begin{aligned}
f &= 7\ 11\ 10\ 11\ 7\ 2\ 7\ 11\ 10\ 11\ 7\ 2\ 7\ 11\ldots \\
Df &= 4\ 11\ 1\ 8\ 7\ 5\ 4\ 11\ 1\ 8\ 7\ 5\ 4\ 11\ldots \\
D^2 f &= 7\ 2\ 7\ 11\ 10\ 11\ 7\ 2\ 7\ 11\ 10\ 11\ldots \\
D^3 f &= 7\ 5\ 4\ 11\ 1\ 8\ 7\ 5\ 4\ 11\ 1\ 8\ldots \\
D^k f &= \ldots\ldots
\end{aligned}
$$

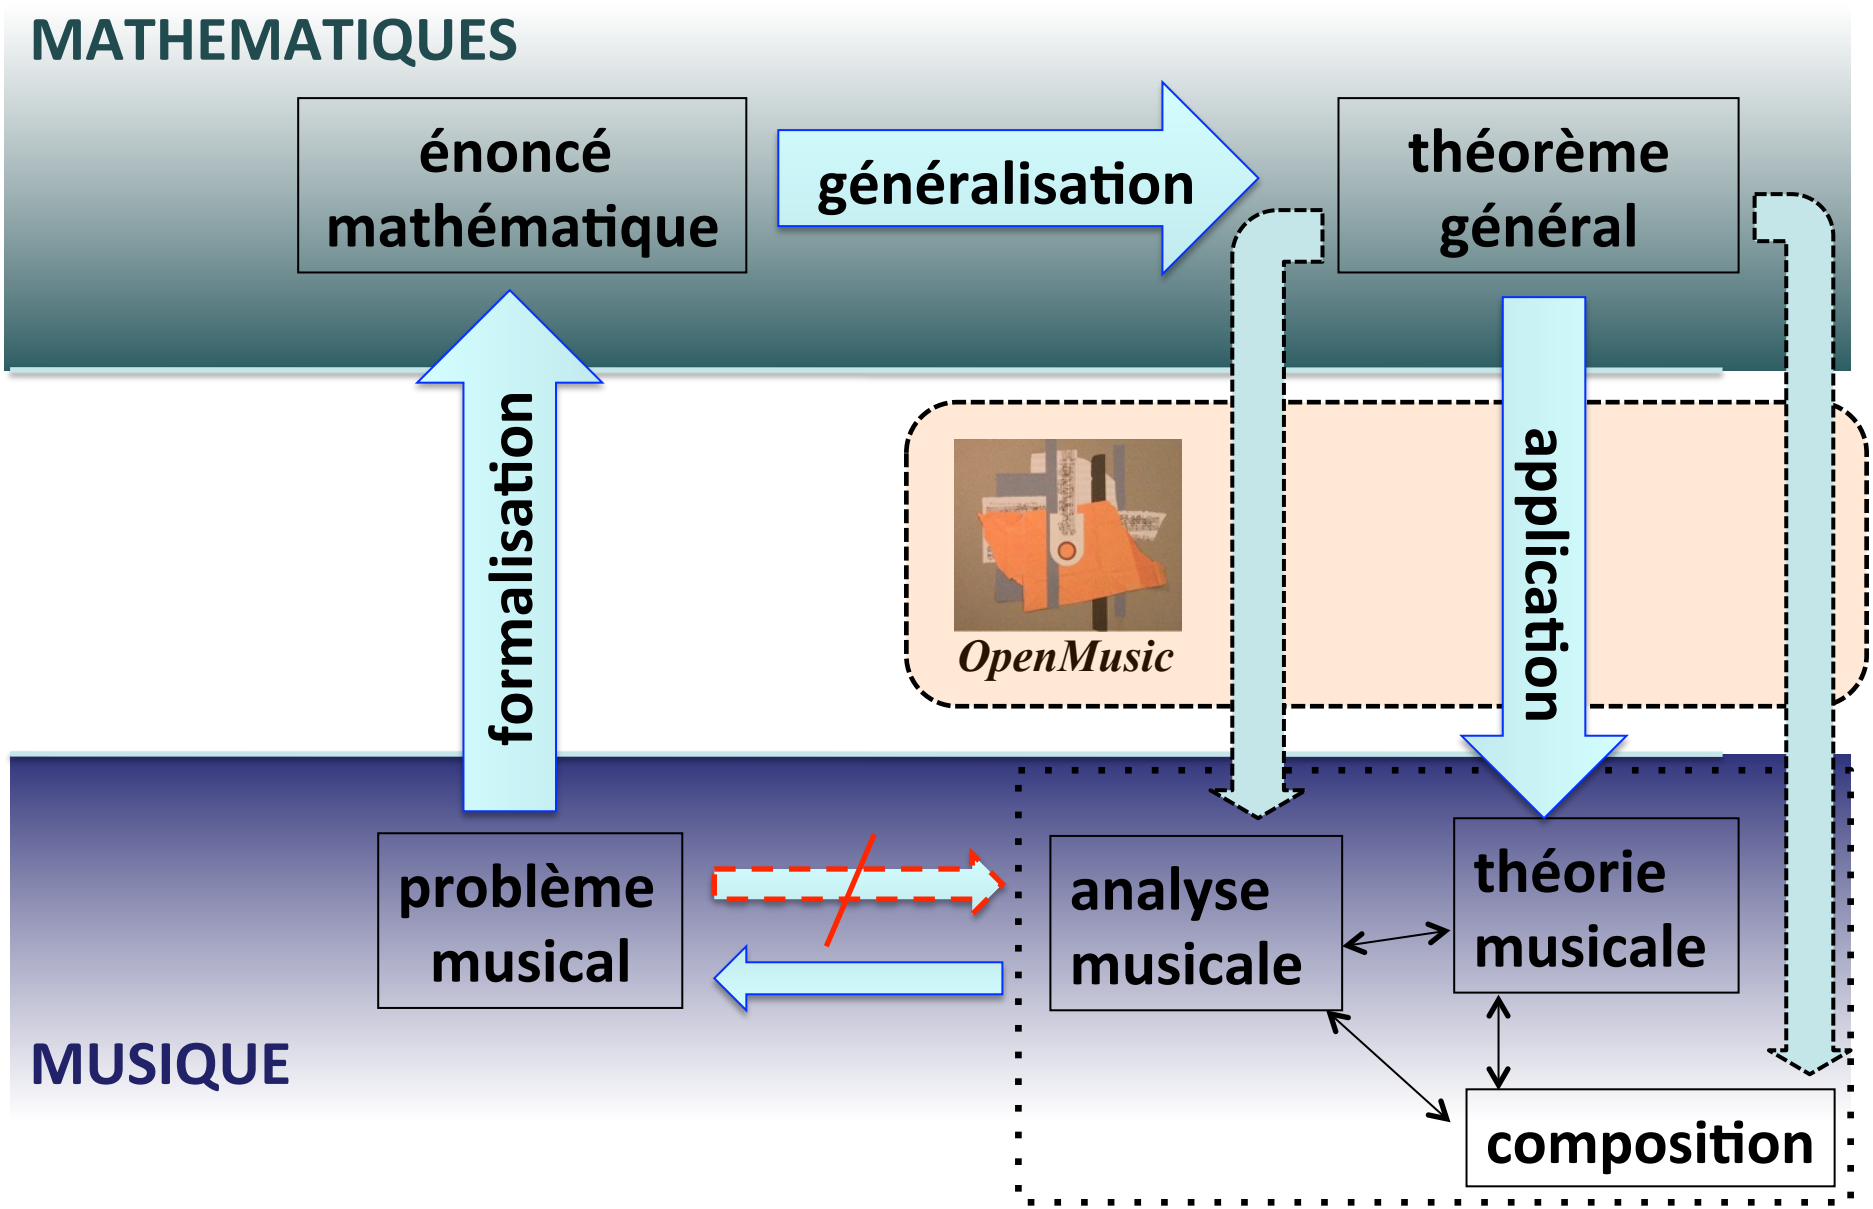
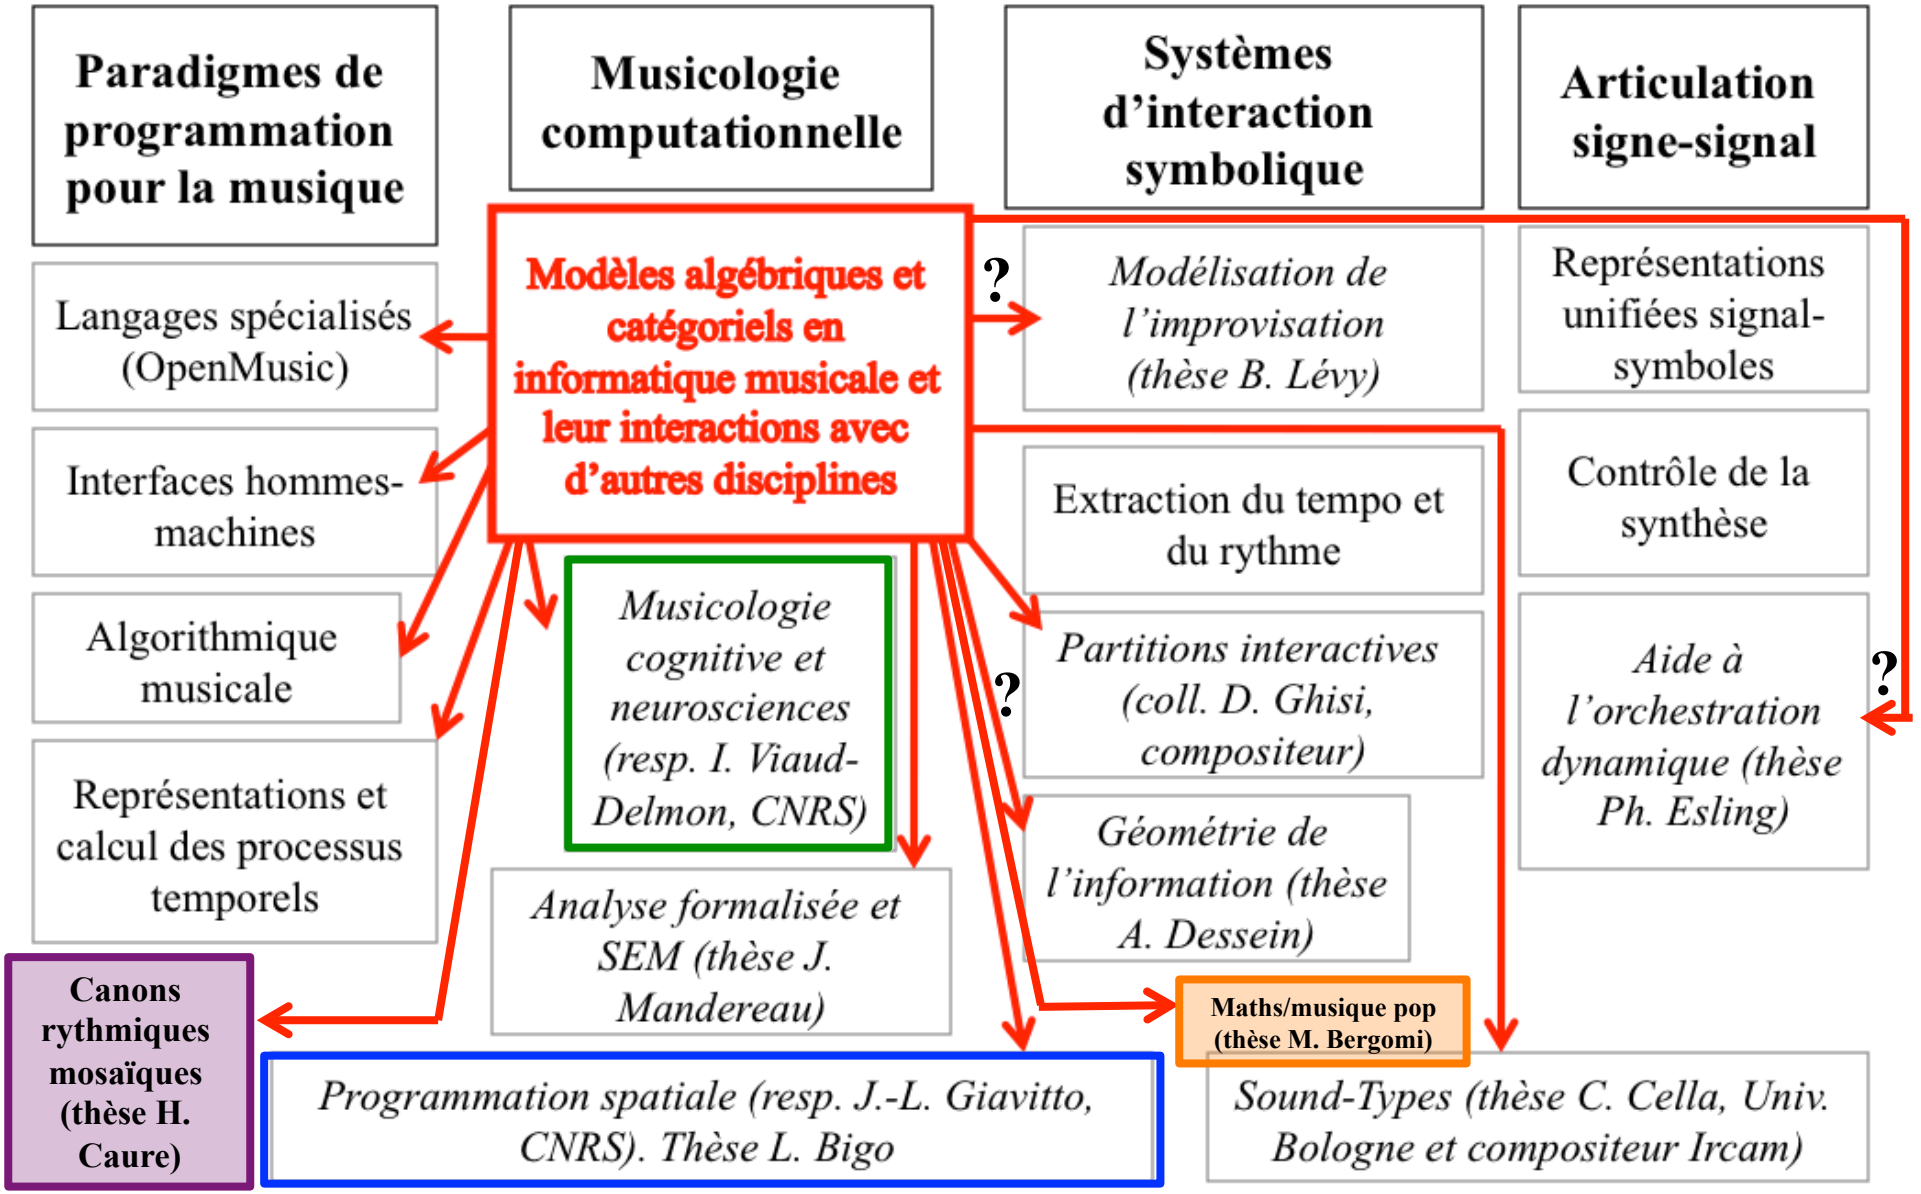
Double mouvement d'une dynamique mathémusicale



La musicologie computationnelle au sein de RepMus



La place des mathématiques dans la musicologie systématique

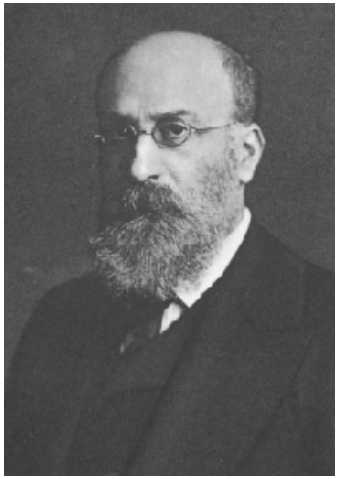
Guido Adler : « Umfang, Methode und Ziel der Musikwissenschaft » (1885)

II. Systematisch.

Aufstellung der in den einzelnen Zweigen der Tonkunst zuhöchst stehenden Gesetze.

A. Erforschung und Begründung derselben in der			B. Aesthetik der Tonkunst.	C. Musikalische Pädagogik und Didaktik	D. Musikologie
1. *Harmonik* (tonal od. tonlich).	2. *Rhythmik* (temporär oder zeitlich).	3. *Melik* (Cohärenz von tonal und temporär).	1. Vergleichung und Werthschätzung der Gesetze und deren Relation mit den appercipirenden Subjecten behufs Feststellung der *Kriterien des musikalisch Schönen.* 2. Complex unmittelbar und mittelbar damit zusammenhängender Fragen.	(Zusammenstellung der Gesetze mit Rücksicht auf den Lehrzweck) 1. Tonlehre, 2. Harmonielehre, 3. Kontrapunkt, 4. Compositionslehre, 5. Instrumentationslehre, 6. Methoden des Unterrichtes im Gesang und Instrumentalspiel.	(Untersuchung und Vergleichung zu ethnographischen Zwecken).

Hilfswissenschaften: Akustik und Mathematik.
Physiologie (Tonempfindungen).
Psychologie (Tonvorstellungen, Tonurtheile und Tongefühle).
Logik (das musikalische Denken).
Grammatik, Metrik und Poetik.
Pädagogik
Ästhetik etc.



G. Adler (1855-1941)

SysMusGraz

R. Parncutt

« La deuxième grande partie de la musicologie est la partie systématique; cette partie se base sur la partie historique. (...) L'accent de l'observation réside dans l'analogie de la méthode musicologique avec la méthode scientifique ».

Un court survol historique

MUSIQUE	MATHS
500 av. J. C. Relation hauteur/longueur corde. La musique est source d'inspiration pour la théorie des nombres et la géométrie.	Nombres naturels et rationnels
300 a.J. Invention (théorique) de la gamme chromatique tempérée égale par Atistoxène de Tarente) et **prémonition de la théorie des groupes**. Isomorphismes entre les logarithmes (intervalles musicaux) et les exponentiels (longueur d'une corde)	*Aucune relation.*
1000 Invention de la représentation bidimensionnelle des hauteurs	*Aucune correspondance*
1500 *Aucune reprise des concepts précédents*	Nombres négatifs. Construction des rationnels
1600 *Aucune relation*	Nombres réels et les logarithmes
Marin Mersenne (1588-1648) : combinatoire musicale	Calcul des probabilités
1700 La fugue comme un automate abstrait. Manipulation inconsciente du groupe de Klein	Nombres complexes (Euler, Gauss), les quaternions (Hamilton), continuité (Cauchy), structure de groupe (Galois, Abel)
Leonhard Euler : *Speculum Musicum* (1773)	Théorie des graphes
1900 Libération de la prison de la tonalité (Loquin, Hauer, Schoenberg)	Nombres infinis et transfinis (Cantor). Axiomatique de Peano. Théorie de la mesure (Lebesgue, Borel)
1920 Formalisation radicale des macrostructures à travers le système sériel (Schoenberg)	*Aucun développement de la théorie des nombres.*
Ernst Krenek (1900-1991) : les axiomes dans le système dodécaphonique	*David Hilbert, Les fondements de la géométrie (1899)*

Iannis Xenakis, *Musique. Architecture*, Tournai, Casterman, 1971, 176 p. (New, revised edition: Tournai, Casterman, 1976, 238 p.)

Pythagore et le monocorde, VI^e-V^e siècle av. J. C.

I. Xenakis

Set Theory chez K. Stockhausen

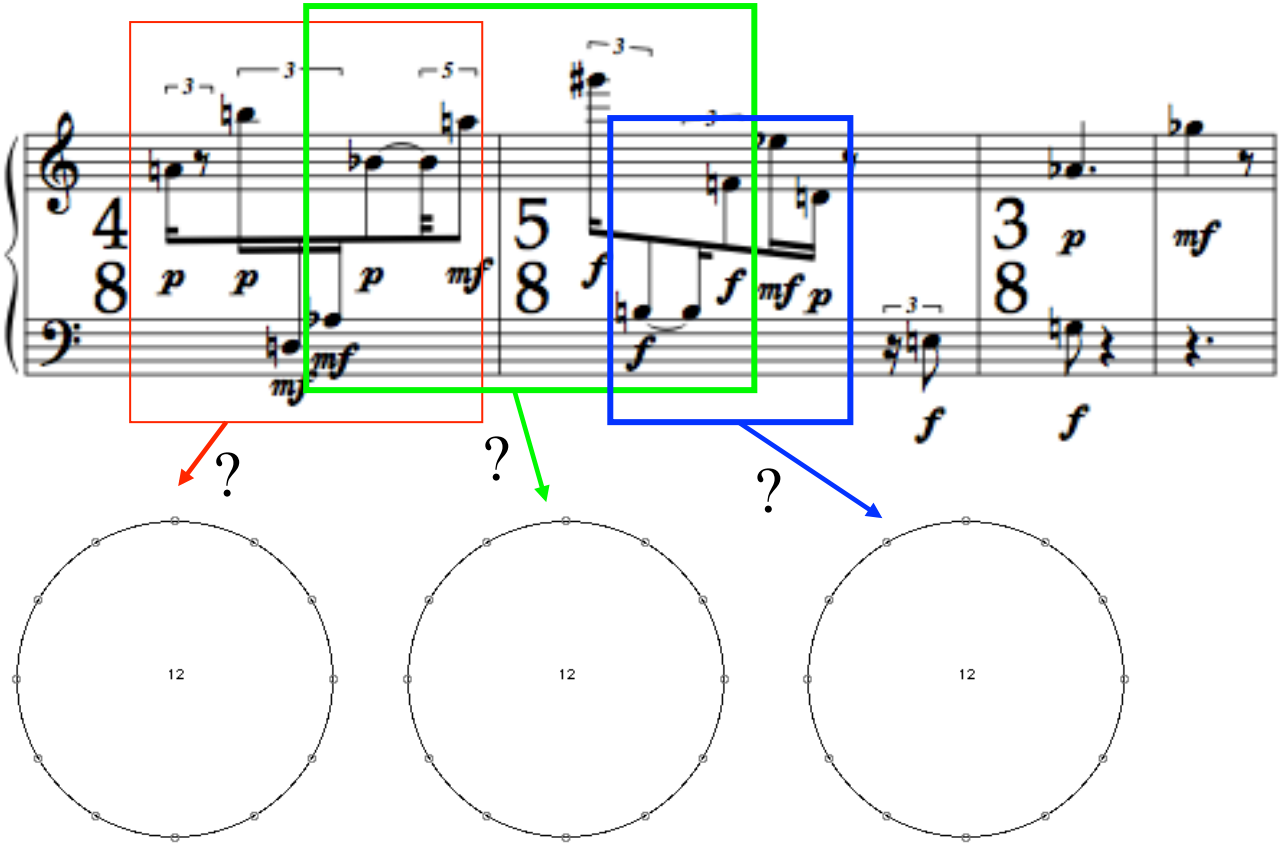
Trois interprétations :

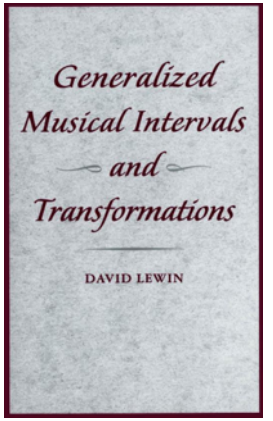
Henck

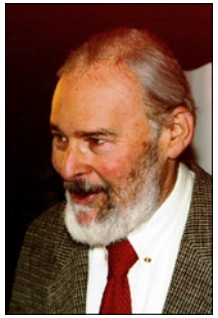
Kontarsky

Tudor

« *Making* and *Using* a Pcset Network for Stockhausen's Klavierstück III »



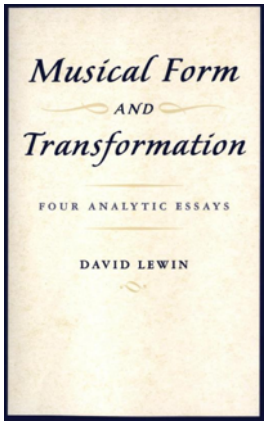




D. Lewin
(1933-2003)

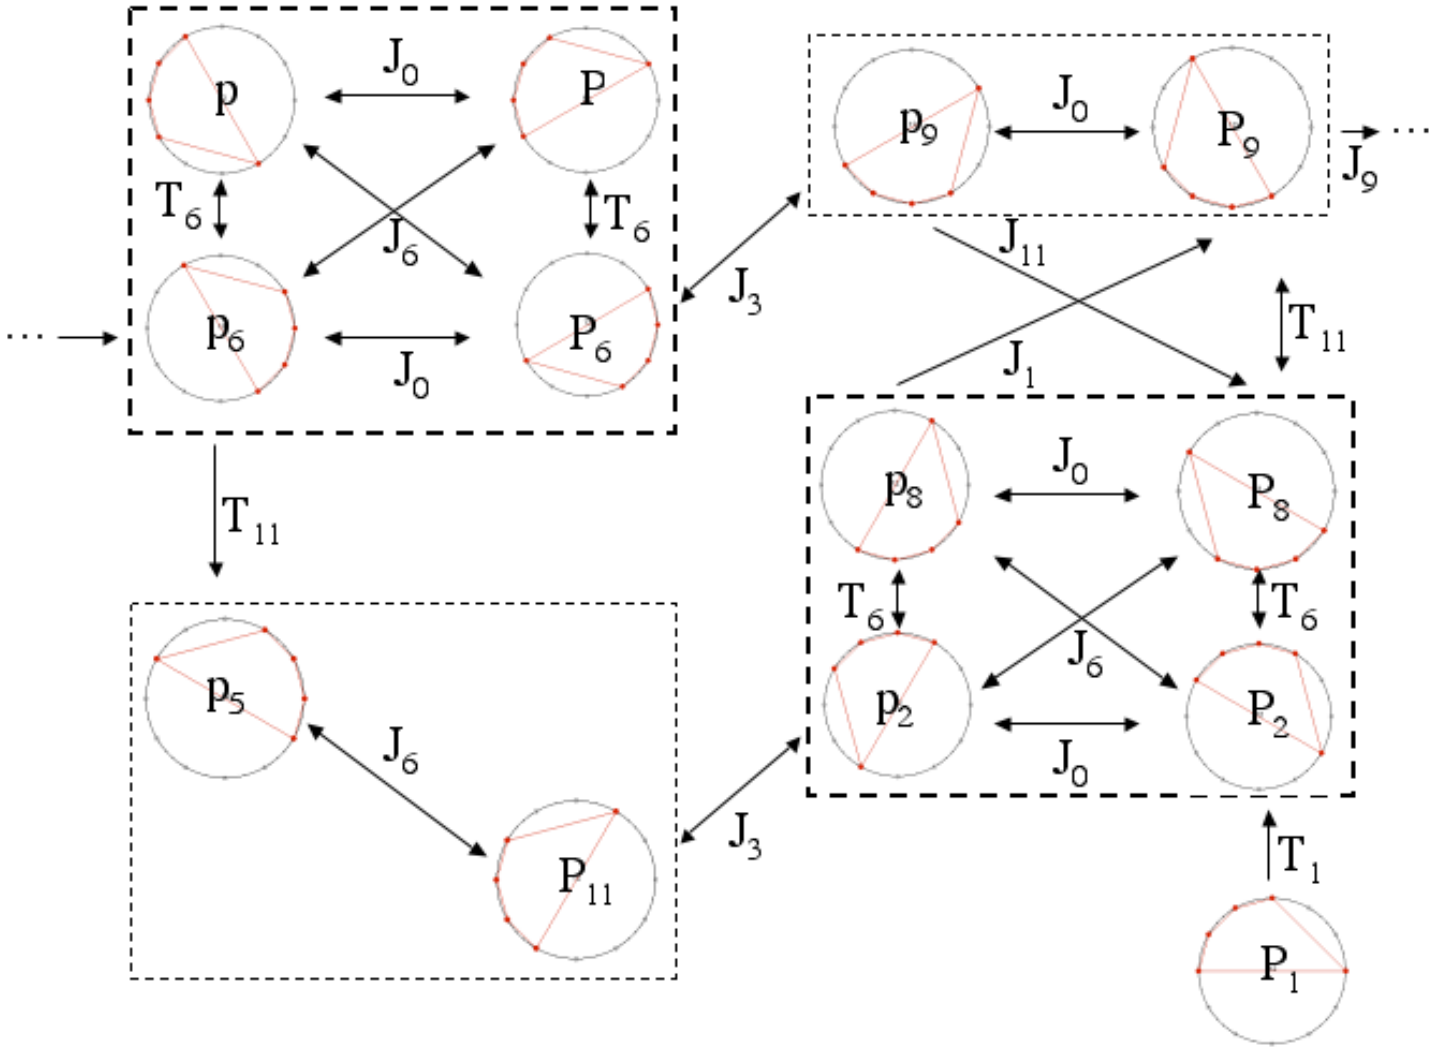
« The most 'theoretical' of the four essays, it focuses on the forms of one pentachord reasonably ubiquitous in the piece. A special **group of transformations** is developed, one suggested by the musical interrelations of the pentachord forms. Using that group, the essay arranges **all pentachord forms** of the music into a **spatial configuration** that illustrates network structure, for this particular phenomenon, over the entire piece. »

David Lewin, *Musical Form and Transformation,* YUP 1993



Reseau transformationnel

Stockhausen: *Klavierstück III* (Analyse de D. Lewin)



« Rather than asserting a network that follows pentachord relations one at a time, according to the chronology of the piece, I shall assert instead a network that displays all the pentachord forms used and all their **potentially functional interrelationships**, in a very compactly organized little **spatial configuration**. »

« […] the sequence of events moves within a clearly defined world of possible relationships, and because - in so moving - **it makes the abstract space of such a world accessible to our sensibilities**. That is to say that the story projects what one would traditionally call *form*. »

(Gabriele d'Annunzio)

Socchiusa è la finestra, sul giardino.
Un'ora passa lenta, sonnolenta.
Ed ella, ch'era attenta, s'addormenta
a quella voce che già si lamenta,
– che si lamenta in fondo a quel giardino.

Non è che voce d'acque su la pietra:
e quante volte, quante volte udita!
Quell'amore e quell'ora in quella vita
s'affondan come ne l'onda infinita
stretti insieme il cadavere e la pietra.

Ella stende l'angoscia sua nel sonno.
L'angoscia è forte, e il sonno è così lieve!
(Par la luce d'april quasi una neve
che sia tiepida.) Ed ella certo deve
soffrire, vagamente, anche nel sonno.

Gabriele D'Annunzio (1863-1938)
