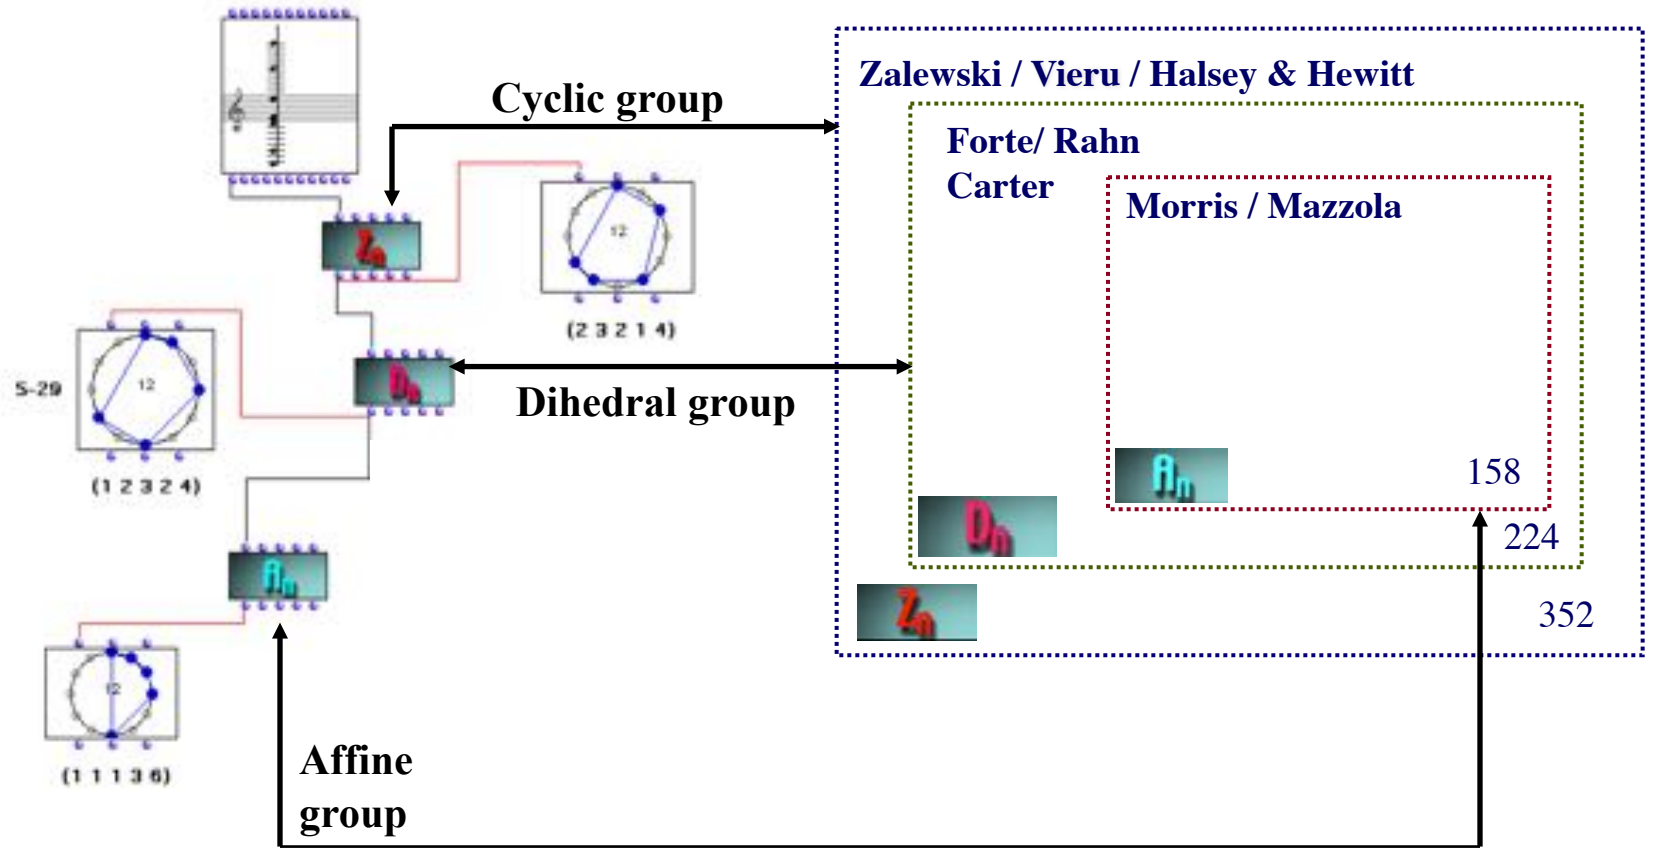
Invariance and the classification of musical structures



F. Klein

W. Burnside

G. Polya

The nature of a given geometry is […] defined by the *reference* to a determinate group and the way in which spatial forms are related within that type of geometry. [*Cf. Felix Klein Erlangen Program - 1872*][…] We may raise the question whether there are any concepts and principles that are, although in different ways and different degrees of distinctness, necessary conditions for both the *constitution* of the perceptual world and the construction of the universe of geometrical thought. It seems to me that the **concept of group** and the **concept of invariance** are such principles.

E. Cassirer

E. Cassirer, "The concept of group and the theory of perception", 1944

The algebraic-geometric genealogy of structuralism

E. Cassirer

G.-G. Granger

J. Piaget

« [C'est la **notion de groupe** qui] donne un sens précis à l'idée de **structure** d'un ensemble [et] permet de déterminer les éléments efficaces des transformations en réduisant en quelque sorte à son **schéma opératoire** le domaine envisagé. […]L'objet véritable de la science est le **système des relations** et non pas les termes supposés qu'il relie. […] Intégrer les résultats - symbolisés - d'une expérience nouvelle revient […] à créer un canevas nouveau, un **groupe de transformations** plus complexe et plus compréhensif »

G.-G. Granger, "Pygmalion. Réflexions sur la pensée formelle", 1947

« La **théorie des catégories** est une théorie des constructions mathématiques, qui est macroscopique, et procède d'étage en étage. Elle est un bel exemple d'**abstraction réfléchissante**, cette dernière reprenant elle-même un principe constructeur présent dès le stade sensori-moteur. Le **style catégoriel** qui est ainsi à l'image d'un aspect important de la genèse des facultés cognitives, est un style adéquat à la description de cette genèse »

Jean Piaget, Gil Henriques et Edgar Ascher, *Morphismes et Catégories. Comparer et transformer*, 1990

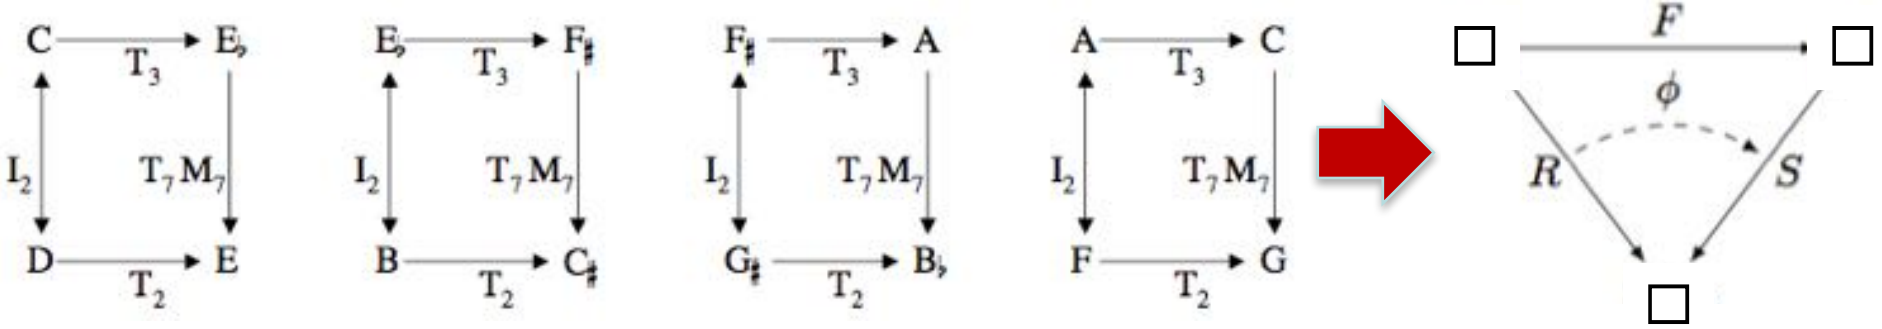
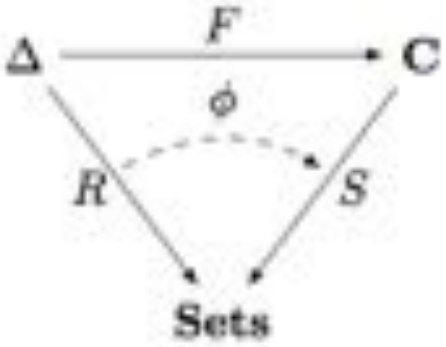
From K-Nets to category-based PK-Nets



Definition 1 *Let* **C** *be a category, and* S *a functor from* **C** *to the category* **Sets**. *Let* Δ *be a small category and* R *a functor from* Δ *to* **Sets**. *A PK-net of form* R *and of support* S *is a 4-tuple* (R, S, F, ϕ), *in which*

- F *is a functor from* Δ *to* **C**,
- *and* ϕ *is a natural transformation from* R *to* SF.

The definition of a PK-net is summed up by the following diagram:



Popoff A., M. Andreatta, A. Ehresmann, « A Categorical Generalization of Klumpenhouwer Networks », MCM 2015, Queen Mary University, Springer, p. 303-314

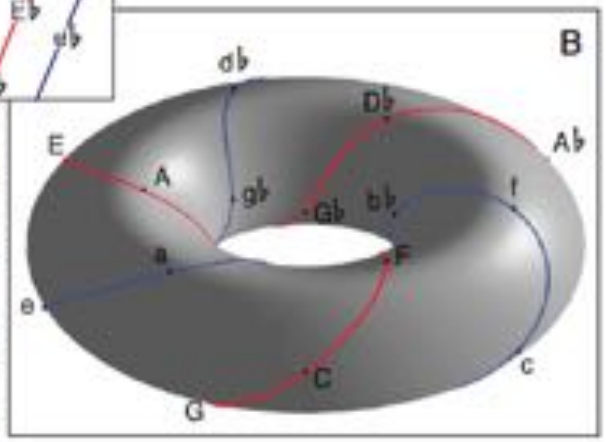
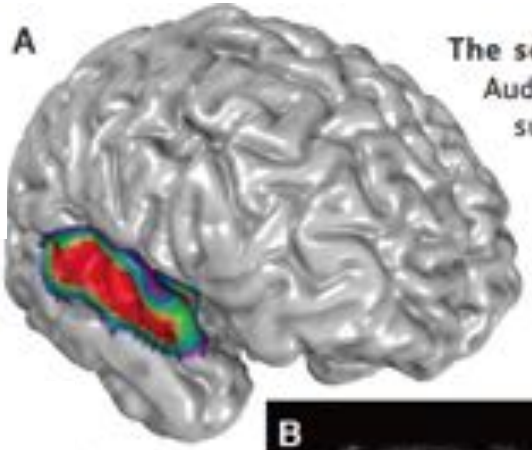
PERSPECTIVES: NEUROSCIENCE

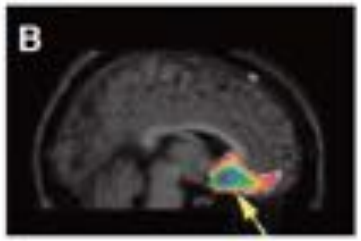
Mental Models and Musical Minds

Robert J. Zatorre and Carol L. Krumhansl



Mental key maps. (A) Unfolded version of the key map, with opposite edges to be considered matched. There is one circle of fifths for major keys (red) and one for minor keys (blue), each wrapping the torus three times. In this way, every major key is flanked by its relative minor on one side (for example, C major and a minor) and its parallel minor on the other (for example, C major and c minor). (B) Musical keys as points on the surface of a torus.





The sensation of music. (A) Auditory cortical areas in the superior temporal gyrus that respond to musical stimuli. Regions that are most strongly activated are shown in red. (B) Metabolic activity in the ventromedial region of the frontal lobe increases as a tonal stimulus becomes more consonant.

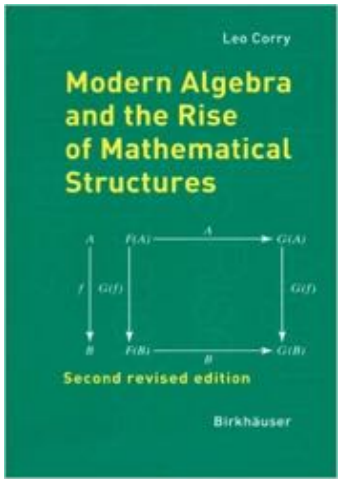
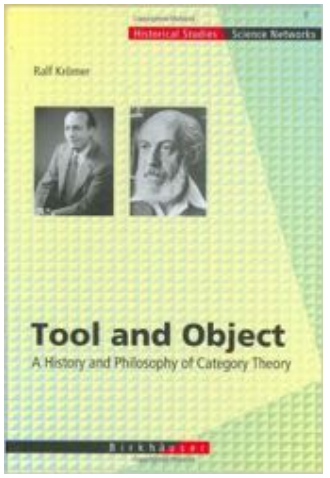
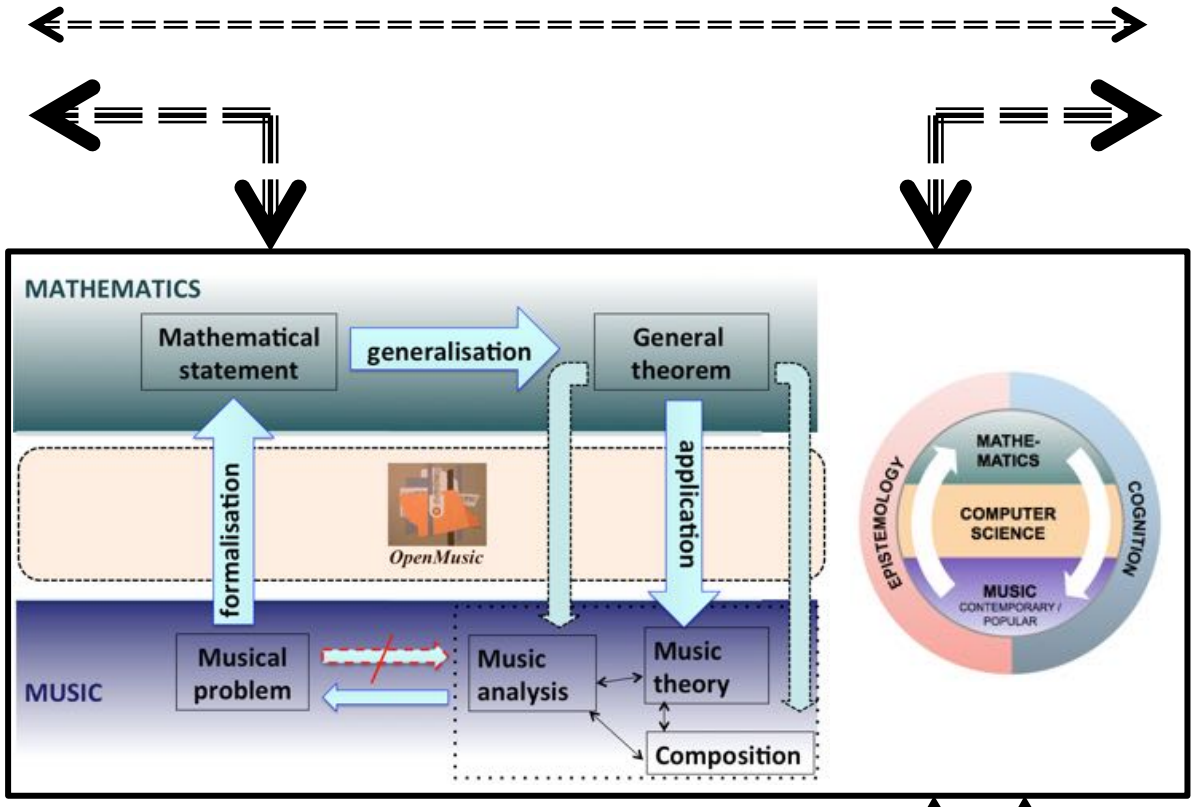
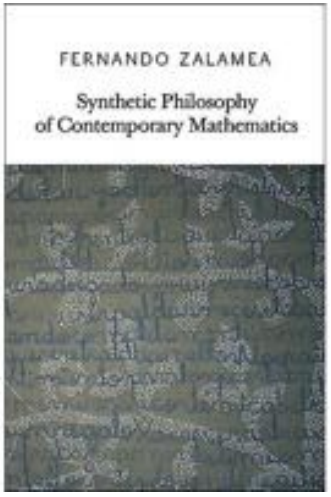
EUROPEAN MATHEMATICAL PSYCHOLOGY GROUP

Which type of philosophy for the *mathemusical* research?









*A **synthetic** vision allows us to link together apparently distant strata of mathematics and culture, helping us to break down many artificial barriers. Not only can today's mathematics be appreciated through epistemic, ontic, phenomenological and aesthetic modes, but in turn, it should help to transform **philosophy.***
